Usability Judy Hammond,Tom Gross,Janet Wesson,2013-04-18 Usability has become increasingly important as an essential part of the design and development of software and systems for all sectors of society business industry government and education as well as a topic of research Today we can safely say that in many parts of the world information technology and communications is or is becoming a central force in revolutionising the way that we all live and how our societies function IFIP s mission states clearly that it encourages and assists in the development exploitation and application of information technology for the benefit of all people The question that must be considered now is how much attention has been given to the usability of the IT based systems that we use in our work and daily lives There is much evidence to indicate that the real interests and needs of people have not yet been embraced in a substantial way by IT decision makers and when developing and implementing the IT systems that shape our lives both as private individuals and at work But some headway has been

made Three years ago the IFIP Technical Committee on Human Computer Interaction IFIP TC13 gave the subject of usability its top priority for future work in advancing HCI within the international community This Usability Stream of the IFIP World Computer Congress is a result of this initiative It provides a showcase on usability involving some practical business solutions and experiences and some research findings

Cooperative Environments for Distributed Systems Engineering Khalil Drira, Andrea Martelli, Thierry Villemur, 2003-06-30 The engineering life cycle for complex systems design and development where partners are dispersed in different locations requires the set up of adequate and controlled processes involving many different disciplines The design integration and the final system physical functional integration and qualification imply a high degree of cross interaction among the partners The place technical information systems supporting the life cycle activities are specialized with respect to the needs of each actor in the process chain and are highly heterogeneous between them To globally innovate in place processes specialists must be able to work as a unique team in a virtual enterprise model To this aim it is necessary to make interoperable the different technical information systems and to define co operative engineering processes which take into account distributed roles shared activities and distributed process controls In this frame an innovative study aimed at addressing this process with the goal of identifying proper solutions in terms of design

implementation and deployment has been carried out with the support of the European Community and the participation of major industrial companies and research centers
