Automated Machine Learning and Industrial Applications E. Gangadevi, M. Lawanya Shri, Balamurugan Balusamy, Rajesh Kumar Dhanaraj, 2025-07-23

The book provides a comprehensive understanding of Automated Machine Learning's transformative potential across various industries, empowering users to seamlessly implement advanced machine learning solutions without needing extensive expertise. Automated Machine Learning (AutoML) is a process to automate the responsibilities of machine learning concepts for real-world problems. The AutoML process is comprised of all steps, beginning with a raw dataset and concluding with the construction of a machine learning model for deployment. The purpose of AutoML is to allow non-experts to work with machine learning models and techniques without requiring much knowledge in machine learning. This advancement enables data scientists to produce the easiest solutions and most accurate results within a short timeframe, allowing them to outperform normal machine learning models. Meta-learning, neural network architecture, and hyperparameter optimization are applied based on AutoML. Automated Machine Learning and Industrial Applications offers an overview of the basic architecture, evolution, and applications of AutoML. Potential applications in healthcare, banking, agriculture, aerospace, and security are discussed in terms of their frameworks, implementation, and evaluation. This book also explores the AutoML ecosystem, its integration with blockchain, and various open-source tools available on the AutoML platform. It serves as a practical guide for engineers and data scientists, offering valuable insights for decision makers looking to integrate machine learning into their workflows. Readers will find the book aims to explore current trends such as augmented reality, virtual reality, blockchain, open-source platforms, and Industry 4.0. Serves as an effective guide for professionals, researchers, industrialists, data scientists, and application developers. Explores technologies such as IoT, blockchain, artificial intelligence.

and robotics serving as a core guide for undergraduate and postgraduate students Audience Data and computer scientists research scholars professionals and industrialists interested in technology for Industry 4.0 applications

J. Eskilson, 2019-05-21 A classic and indispensable account of graphic design history from the Industrial Revolution to the present. Now in its third edition, this acclaimed survey explores the evolution of graphic design from the 19th century to the present day. Following an exploration of design's prehistory in ancient civilizations through the Industrial Revolution, author Stephen J. Eskilson argues that modern design as we know it grew out of the influence of Victorian age reformers. He traces the emergence of modernist design styles in the early 20th century, examining the wartime politicization of regional styles. Richly contextualized chapters chronicle the history of the Bauhaus and the rise of the International Style in the 1950s and 60s, and the postmodern movement of the 1970s and 80s. Contemporary considerations bring the third edition up to date with discussions of app design, social media, emojis, big data visualization, and the use of animated graphics in film and television. The contemporary phenomenon of the citizen designer, professionals who address societal issues either through or in addition to their commercial work, is also addressed, highlighting protagonists like Bruce Mau and the Center for Urban Pedagogy. This edition also features 45 additional images, an expanded introduction and epilogue, and revised text throughout. A newly redesigned interior reinforces the fresh contents of this now classic volume.
