Mortreux, F.

Petit, 2012-12-06 Catalysts are now widely used in both laboratory and industrial scale chemistry Indeed it is hard to find any complex synthesis or industrial process that does not at some stage utilize a catalytic reaction The development of homogeneous transition metal catalysts on the laboratory scale has demonstrated that these systems can be far superior to the equivalent heterogeneous systems at least in terms of selectivity is an increasing interest in this field of research from both an Thus there academic and industrial point of view In connection with the rapid developments in this area four universities from the E E C Aachen FRG Liege Belgium Milan Italy and Lille France have collaborated to organise a series of seminars for high level students and researchers These meetings have been sponsored by the Commission of the E E C and state organizations The most recent of these meetings was held in Lille in September 1985 and this book contains updated and expanded presentations of most of the lectures given there These lectures are concerned with the field of homogeneous transition metal catalysis and its application to the synthesis of organic intermediates and fine chemicals from an academic and industrial viewpoint The continuing petroleum crisis which began in the early 1970s has given rise to the need to develop new feedstocks for the chemical industry **Heterogeneous Catalysis and Fine Chemicals III** J. Barbier, J. Barrault, C.

Bouchoule,D. Duprez,C. Montassier,M. Guisnet,G. Pérot,1993-09-09 Heterogeneous catalysis plays a major role in the organic synthesis of specialty and fine chemicals However as the interaction between surface sites and functional groups is complex more investigations are necessary into the effects of catalysts on the reaction mechanisms The Third International Symposium on Heterogeneous Catalysis and Fine Chemicals provided an opportunity for discussions on the basic and practical aspects of this subject between researchers manufacturers and users of solid catalysts for synthesis of fine chemicals The present volume comprises the invited plenary lectures and research papers classified under the three main headings hydrogenation oxidation and acid catalysis All papers were refereed A large variety of reactions are described the emphasis being on selectivity taking into account all aspects chemo regio and stereoselectivity including enantioselectivity and on the change of these selectivities as a function of the characteristics of the catalysts and operating conditions

Chemistry, Clean Technology And Sustainability John Meurig Thomas,2012-04-16 For far too long chemists and industrialists have relied on the use of aggressive reagents such as nitric and sulphuric acids permanganates and dichromates to prepare the massive quantities of both bulk and fine chemicals that are needed for the maintenance of civilised life materials such as fuels fabrics foodstuffs fertilisers and pharmaceuticals Such aggressive reagents generate vast quantities of environmentally harmful and often toxic by products including the oxides of nitrogen of metal oxides and carbon dioxide Now owing to recent advances made in the synthesis of nanoporous solids it is feasible to design new solid catalysts that enable benign mild oxidants to be used frequently without utilising solvents to manufacture the products that the chemical pharmaceutical agro and bio chemical industries require These new solid agents are designated single site heterogeneous catalysts SSHCs Their principal characteristics are that all the active sites present in the high area solids are identical in their atomic environment

and hence in their energy of interaction with reactants just as in enzymes Single site heterogeneous catalysts now occupy a position of growing importance both academically and in their potential for commercial exploitation This text the only one devoted to such catalysts dwells both on principles of design and on applications such as the benign synthesis of nylon 6 and vitamin B3 It equips the reader with unifying insights required for future catalytic adventures in the quest for sustainability in the materials used by humankind Anyone acquainted with the language of molecules including undergraduates in the physical and biological sciences as well as graduates in engineering and materials science should be able to assimilate the principles and examples presented in this book Inter alia it describes how clean technology and green processes may be carried out in an environmentally responsible manner *Handbook of Heterogeneous Catalysis, 8 Volume Set* Gerhard Ertl, Helmut Knözinger, Ferdi Schüth, Jens Weitkamp, 2008-03-31 Now in 8 volumes the completely revised and expanded second edition of this much cited handbook collates the knowledge available on heterogeneous catalysis providing easy to find yet comprehensive information The new edition contains some 80% more material and takes into account the latest developments in the field making it still the most up to date compendium in heterogeneous catalysis More than 300 leading experts a veritable Who's Who in catalysis contributed to this unrivalled masterpiece covering all aspects of the subject from the physico chemical foundations to large scale industrial applications With its straightforward presentation this is an essential and indispensable tool for every scientist working in this area
