A Macroeconomic Approach to the Term Premium Emanuel Kopp, Peter D. Williams, 2018-06-15 In recent years term premia have been very low and sometimes even negative Now with the United States economy growing above potential inflationary pressures are on the rise Term premia are very sensitive to the expected future path of growth inflation and monetary policy and an inflation surprise could require monetary policy to tighten faster than anticipated inducing to a sudden decompression of term and other risk premia thus tightening financial conditions This paper proposes a semi structural dynamic term structure model augmented with macroeconomic factors to include cyclical dynamics with a focus on medium to long run forecasts Our results clearly show that a macroeconomic approach is warranted While term premium estimates are in line with those from other studies we provide i plausible stable estimates of expected long term interest rates and ii forecasts of short and long term interest rates as well as cyclical macroeconomic variables that are stunningly close to those generated from large scale macroeconomic models

Macroeconomic Survey Expectations Michael P. Clements, 2018-12-31 Why should we be interested in macroeconomic survey expectations This important book offers an in depth treatment of this question from a point of view not covered in existing works on time series econometrics and forecasting Clements presents the nature of survey data addresses some of the difficulties posed by the way in which survey expectations are elicited and considers the evaluation of point predictions and probability distributions He outlines how from a behavioural perspective surveys offer insight into how economic agents form their expectations

Applied Macroeconomics for Public Policy Rafael Yanushevsky, Camilla Yanushevsky, 2018-09-28

Applied Macroeconomics for Public Policy applies system and control theory approaches to macroeconomic problems. The book shows how to build simple and efficient macroeconomic models for policy analysis. By using these models instead of complex multi criteria models with uncertain parameters, readers will gain new certainty in macroeconomic decision making. As high debt to GDP ratios cause problems in societies, this book provides insights on improving economies during and after economic downturns. Provides a detailed analysis of existing macroeconomic models. Addresses the dynamics of debt to GDP ratio and the effects of fiscal and monetary policy on this ratio. Shows how to use models to evaluate the dynamics of the debt to GDP ratio in cases of government spending and tax cuts and to decide whether such economic measures are efficient. Uses optimal theory to obtain optimal yearly debt levels to reach the established goals, decrease debt or balance budget. Provides many examples and software exercises to promote learning by doing.

Advanced Introduction to Central Banks and Monetary Policy de Haan, Jakob, 2022-08-12. Written by two expert economists, this comprehensive Advanced Introduction provides a thorough and up to date analysis of central banks and monetary policy, analysing the ways in which views about monetary policy have developed and changed.

Research Handbook on Inflation Guido Ascari, Riccardo Trezzi, 2025-06-09. This Research Handbook provides a comprehensive overview of the multifaceted landscape of inflation studies, policy and practice. Analysing theoretical and empirical literature on measuring inflation and on the drivers of inflation dynamics, it sheds light on developments in monetary policy over the past two decades.

Nowcasting GDP - A Scalable Approach Using DFM, Machine Learning and Novel Data, Applied to European Economies Mr. Jean-Francois Dauphin, Mr. Kamil Dybczak, Morgan Maneely, Marzie Taheri Sanjani, Mrs. Nujin Suphaphiphat, Yifei Wang, Hanqi Zhang, 2022-03-11. This paper describes recent work to strengthen nowcasting capacity at the IMF's European department. It motivates and compiles datasets of standard and nontraditional variables such as Google search and air quality. It applies standard dynamic factor models (DFMs) and several machine learning (ML) algorithms to nowcast GDP growth across a heterogeneous group of European economies during normal and crisis times. Most of our methods significantly outperform the AR(1) benchmark model. Our DFMs tend to perform better during normal times, while many of the ML methods we used performed strongly at identifying turning points. Our approach is easily applicable to other countries, subject to data availability.

Mending the Crystal Ball: Enhanced Inflation Forecasts with Machine Learning Yang Liu, Ran Pan, Rui Xu, 2024-09-27. Forecasting inflation has become a major challenge for central banks since 2020 due to supply chain disruptions and economic uncertainty post pandemic. Machine learning models can improve forecasting performance by incorporating a wider range of variables, allowing for non linear relationships and focusing on out of sample performance. In this paper, we apply machine learning (ML) models to forecast near term core inflation in Japan post pandemic. Japan is a challenging case because inflation had been muted until 2022 and has now risen to a level not seen in four decades. Four machine learning models are applied to a large set of predictors alongside two benchmark models. For 2023, the two penalized regression models systematically outperform the

benchmark models with LASSO providing the most accurate forecast Useful predictors of inflation post 2022 include household inflation expectations inbound tourism exchange rates and the output gap *Machine Learning for Asset Management* Emmanuel Jurczenko,2020-07-16 This new edited volume consists of a collection of original articles written by leading financial economists and industry experts in the area of machine learning for asset management The chapters introduce the reader to some of the latest research developments in the area of equity multi asset and factor investing Each chapter deals with new methods for return and risk forecasting stock selection portfolio construction performance attribution and transaction costs modeling This volume will be of great help to portfolio managers asset owners and consultants as well as academics and students who want to improve their knowledge of machine learning in asset management **Big Data for Twenty-First-Century Economic Statistics** Katharine G. Abraham,Ron S. Jarmin,Brian C. Moyer,Matthew D. Shapiro,2022-03-11 The papers in this volume analyze the deployment of Big Data to solve both existing and novel challenges in economic measurement The existing infrastructure for the production of key economic statistics relies heavily on data collected through sample surveys and periodic censuses together with administrative records generated in connection with tax administration The increasing difficulty of obtaining survey and census responses threatens the viability of existing data collection approaches The growing availability of new sources of Big Data such as scanner data on purchases credit card transaction records payroll information and prices of various goods scraped from the websites of online sellers has changed the data landscape These new sources of data hold the promise of allowing the statistical agencies to produce more accurate more disaggregated and more timely economic data to meet the needs of policymakers and other data users This volume documents progress made toward that goal and the challenges to be overcome to realize the full potential of Big Data in the production of economic statistics It describes the deployment of Big Data to solve both existing and novel challenges in economic measurement and it will be of interest to statistical agency staff academic researchers and serious users of economic statistics **Portfolio Structuring and the Value of Forecasting** Jacques Lussier,Andrew Ang,Mark Carhart,Craig Bodenstein,Philip E. Tetlock,Warren Hatch,David Rapach,2016-10-10
