**Integrated Reconfigurable Manufacturing Systems and Smart Value Chain** M. Reza Abdi, Ashraf W. Labib, Farideh Delavari Edalat, Alireza Abdi, 2018-05-30 The book develops manufacturing concepts and applications beyond physical production and towards a wider manufacturing value chain incorporating external stakeholders that include suppliers of raw materials and parts customers collaborating manufacturing companies manufacturing service providers and environmental organisations The focal point of the value chain remains as a manufacturing system and its operations while flows of parts materials and information and services across the supply value chain tiers are taken into

account The book emphasises on the two innovative paradigms of Reconfigurable Manufacturing Systems RMS and the 4th industrial revolution Industry 4.0 along with their incorporated development RMS as a relatively new paradigm has been introduced to meet the requirements of the factories of the future which is aimed by Industry 4.0 though introducing greater responsiveness and customised flexibility into production systems in which changes in product volumes and types occur regularly Manufacturing responsiveness can be achieved by RMS through reconfiguring the production facilities according to changing demands of products and new market conditions The book addresses challenges of mass customisation and dynamic changes in the supply chain environment by focusing on developing new techniques related to integrability scalability and reconfigurability at a system level and manufacturing readiness in terms of financial and technical feasibility of RMS It demonstrates the expected impacts of an RMS design on operational performance and its supply value chain in the current future manufacturing environment facing dynamic changes in the internal external circumstances In order to establish a circular economy through the RMS value chain an integrated data based reconfiguration link is introduced to incorporate information sharing amongst the value chain stakeholders and facilitate grouping products into families with allocation of the product families to the corresponding system configurations with optimal product process allocation Decision support systems such as multi criteria decision making tools are developed and applied for the selection of product families and optimising product process configuration The proposed models are illustrated through real case studies in applicable manufacturing firms
