**Building Telecom Markets** Whasun Jho, 2013-08-27 The mobile telecommunication industry has been one of the fastest growing industries in the global economy since the late 1990s. As the first country to offer commercial Code Division Multiple Access (CDMA) cellular service in the world, Korea was able to jump right into the digital mobile markets, enhancing its status as a leading manufacturer of mobile equipment. While the growth of the telecom industry occurred with the emergence of worldwide market-oriented regulatory reform and liberalization in telecommunications, the state-market relationship in Korea evolved from state monopoly toward centralized governance and later toward flexible governance, which is substantially different from liberal governance of the US. This book examines the uniqueness of Korean regulatory reforms of the mobile telecommunication sector and argues that the market-oriented regulatory reform and liberalization should be explained by focusing on the interactions among the state, the private sector, and international political-economic environment. It will appeal to scholars and policy makers alike concerned with market regulation, Asian development, and political economy.

This carefully curated collection will serve as the central text to introduce this field to anyone eager to understand the rise of mobile technology, its impact on our relationships, and how these media have transformed the ways we understand the world around us.
