

Above: The M24 120mm gun is a smooth-bore weapon. This allows for extremely high velocity of modern low-velocity, energy rounds. The penetrators of these rounds are 50 calibers. (Dan Morony)

Opposite above: The M24 120mm gun mounts a rounded conical jacket bore evacuator. Pressure within the gun tube behind the exiting round is reduced as the gas leaks off through and back in the tube within the evacuator. (Dan Morony)

Opposite below: The bore evacuator creates a slight lower pressure situation between the breech and the evacuator so that when the breech opens, air flows into the tube, reducing the risk of backblast, extremely important in the Abrams due to the combustion cartridge case of its ammunition. M1 Abrams David Doyle,2019-06-30 A photographic history of the principal main battle tank of the modern US military Conceived to counter the threat of a massive Soviet armored incursion in Europe the M1 Abrams tank gained considerable fame during the Persian Gulf War of 1991 and its combat record has continued to climb With such a long service life the Abrams has undergone continual improvements and upgrades which are illustrated in great detail in this volume The unique features of the various models are detailed in stunning color photos and the combat use of these fearsome vehicles is richly illustrated through previously unpublished photos The story of the Abrams begins in the late 1960s when the threat of Soviet Armor developments forced the U S to look for a suitable replacement for the M60 series A joint venture between the U S and West Germany to build a suitable common Main Battle Tank brought about the unorthodox and terribly expensive MBT70 It never saw series production When this program was cancelled in 1970 a quest for a more cost effective tank was begun The constant development upgrade and conversion of the series have kept the Abrams at the forefront of main battle tank technology and it has proven itself on the battlefield time and time again This book filled with rare archival photos takes us through decades of its remarkable history including improvements to its armor transmission and engine the addition of an integrated nuclear biological and chemical system the installation of a layer of depleted uranium and interior blast doors to protect the crew and more

of these vehicles and their variants in this informative volume of stunning wartime photographs The Patton series of medium main battle tanks including the M46 M47 and M48 supplemented by the M103s Heavy Tank initially formed the core of the US tank fleet In 1960 the M60 MBT entered service and in turn was replaced by the M1 Abrams in 1980 In support were armored reconnaissance vehicles progressively the M41 bull dog 1951 the M114 1961 the M551 Sheridan 1967 and M3 Bradley Cavalry Fighting Vehicle 1981 The armored personnel carrier range included the ubiquitous M113 and its replacement the M2 Bradley cousin of the M3 All of these vehicles are covered in this highly detailed volume in the Images of War series

M36/M36B1 Tank Destroyer David Doyle, 2019-04 Going into WWII the prevailing strategy of the US command was that tanks were not to be used to engage enemy tanks in combat Rather tanks were to be the armored spearhead to breach enemy positions Enemy tanks were to be dealt with by specialized weapons aptly named tank destroyers While the 3 inch weapon of the M10 was superior to that found on earlier US tank destroyers it was still found to be inadequate against the ever increasing weight of German armor An even larger gun the 90mm M3 was placed in a new bigger open topped turret on 100 new hulls purpose built for this and by remanufacturing M10A1s primarily from US based training units As the supply of these chassis was depleted additional vehicles were created by converting Diesel powered M10s resulting in the M36B2 The M36B1 was built from the ground up as a tank destroyer using a hull based on that of the M4A3 but featuring a standard M36 turret Examination of rare surviving vehicles indicate that the M36B1 hulls were manufactured expressly for this purpose and were not merely M4A3 hulls that were converted While US antitank doctrine changed rendering all the tank destroyers obsolete post WWII many of these vehicles were supplied to other nations and in fact some survived as combat vehicles into the 21st century
