

- Remove the air cleaner element (2).

- Carefully use compressed air to clean the air cleaner element.

CAUTION

Always apply compressed air to the inside of the air cleaner element. If compressed air is applied to the outside, dirt will be forced into the pores of the air cleaner element, restricting air flow through the air cleaner element.

- Reinstall the cleaned or new air cleaner element in the reverse order of removal.

CAUTION

If driving under dusty conditions, clean the air cleaned element more frequently. The surest way to accelerate engine wear is to use the engine without the element or to use a ruptured element. Make sure that the air cleaner is in good condition at all times. Life of the engine depends largely on this component.

NOTE

When cleaning the air cleaner element, drain water from the air cleaner by removing the drain plug.
