Lost Animals Errol Fuller, 2014-06-03 A photograph of an animal long gone evokes a feeling of loss more than a painting ever can Often tinted sepia or black and white these images were mainly taken in zoos or wildlife parks and in a handful of cases featured the last known individual of the species There are some familiar examples such as Martha the last Passenger Pigeon or the Ivory billed Woodpecker recently fledged and perching happily on the hat of one of the biologists that had just ringed it But for every Martha there are a number of less familiar extinct birds and mammals that were caught on camera prior to their demise The photographic record of extinction is the focus of this remarkable book written by the world s leading authority on vanished animals Errol Fuller *Lost Animals* features photographs dating from around 1870 to as recently as 2004 the year that saw the demise of the Hawaiian Po ouli From a mother Thylacine and her pups to now extinct birds such as the Heath Hen and Carolina Parakeet Fuller tells the tale of each animal why it became extinct and discusses the circumstances surrounding the photography itself in a book rich with unique images The photographs themselves are poignant and compelling They provide a tangible link to animals that have now vanished forever in a book that brings the past to life while delivering a warning for the future

What Is Extinction? Joshua Schuster, 2023-02-21 WINNER 25th ANNUAL SUSANNE M GLASSCOCK BOOK PRIZE Life on Earth is facing a mass extinction event of our own making Human activity is changing the biology and the meaning of extinction *What Is Extinction* examines several key moments that have come to define the terms of extinction over the past two centuries exploring

instances of animal and human finitude and the cultural forms used to document and interpret these events Offering a critical theory for the critically endangered Joshua Schuster proposes that different discourses of limits and lastness appear in specific extinction events over time as a response to changing attitudes toward species frailty Understanding these extinction events also involves examining what happens when the conceptual and cultural forms used to account for species finitude are pressed to their limits as well Schuster provides close readings of several case studies of extinction that bring together environmental humanities and multispecies methods with media specific analyses at the terminus of life What Is Extinction delves into the development of last animal photography the anthropological and psychoanalytic fascination with human origins and ends the invention of new literary genres of last fictions the rise of new extreme biopolitics in the Third Reich that attempted to change the meaning of extinction and the current pursuit of de extinction technologies Schuster offers timely interpretations of how definitions and visions of extinction have changed in the past and continue to change in the present

De-Extinction Rebecca E. Hirsch, 2017-01-01 In the twenty first century because of climate change and other human activities many animal species have become extinct and many others are at risk of extinction Once they are gone we cannot bring them back or can we With techniques such as cloning scientists want to reverse extinction and return lost species to the wild Some scientists want to create clones of recently extinct animals while others want to make new hybrid animals Many people are opposed to de extinction Some critics say that the work diverts attention from efforts to save species that are endangered Others say that de extinction amounts to scientists playing God Explore the pros and cons of de extinction and the cutting edge science that makes it possible

Bienvenue, Nicholas Chare, 2022-03-11 The sixth mass extinction or Anthropocene extinction is one of the most pervasive issues of our time *Animals Plants and Afterimages* brings together leading scholars in the humanities and life sciences to explore how extinct species are represented in art and visual culture with a special emphasis on museums Engaging with celebrated cases of vanished species such as the quagga and the thylacine as well as less well known examples of animals and plants these essays explore how representations of recent and ancient extinctions help advance scientific understanding and speak to contemporary ecological and environmental concerns **Bring Back the King** Helen Pilcher, 2016-09-22 If

you could bring back just one animal from the past what would you choose It can be anyone or anything from history from the King of the Dinosaurs T rex to the King of Rock n Roll Elvis Presley and beyond De extinction the ability to bring extinct species back to life is fast becoming reality Around the globe scientists are trying to de extinct all manner of animals including the woolly mammoth the passenger pigeon and a bizarre species of flatulent frog But de extinction is more than just bringing back the dead It s a science that can be used to save species shape evolution and sculpt the future of life on our planet In *Bring Back the King* scientist and comedy writer Helen Pilcher goes on a quest to identify the perfect de extinction candidate Along the way she asks if Elvis could be recreated from the DNA inside a pickled wart investigates whether it s possible to raise a pet dodo and considers the odds of a 21st century Neanderthal turning heads on public transport Pondering the practicalities and the point of de extinction *Bring Back the King* is a witty and wry exploration of what is bound to become one of the hottest topics in conservation if not in science as a whole in the years to come READ THIS BOOK the King commands it **The Annihilation of Nature** Gerardo Ceballos, Anne H. Ehrlich, Paul R. Ehrlich, 2015-09-30

Environmental scientists reveal the victims of humanity s massive assault on nature Gerardo Ceballos Anne H Ehrlich and Paul R Ehrlich serve as witnesses in this trial of human neglect where the charge is the massive and escalating assault on living things Nature is being annihilated not only because of the human population explosion but also as a result of massive commercial endeavors and public apathy Despite the well intentioned work of conservation organizations and governments the authors warn us that not enough is being done and time is short for the most vulnerable of the world s wild birds and mammals Thousands of populations have already disappeared other populations are dwindling daily and soon our descendants may live in a world containing but a minuscule fraction of the birds and mammals we know today *The Annihilation of Nature* is a clarion call for engagement and action These outspoken scientists urge everyone who cares about nature to become personally connected to the victims of our inadequate conservation efforts and demand that restoration replace destruction Only then will we have any hope of preventing the worst case scenario of the sixth mass extinction

Lost Animals, Disappearing Worlds Barbara Allen, 2025-06-12 A moving and motivating collection of portraits of extinct species revealing the profound implications of their disappearance This book presents thirty one extinct species

through personal portraits The intimate approach not only highlights each particular species but also explores the broader implications of losing a species forever How do we honor such a loss Can we grieve for species we never knew These animals range from the well known passenger pigeon thylacine and great auk to lesser known creatures like the Arabian ostrich Saint Helena earwig and Bramble Cay melomys Through her poignant portraits Barbara Allen not only tugs on the heartstrings but also aims to inspire readers to protect vulnerable and endangered species today motivating us to play a positive role in conserving our planet s biodiversity

The Passenger Pigeon Errol Fuller, 2014-09-15 A haunting beautifully illustrated memorial to this iconic extinct bird At the start of the nineteenth century Passenger Pigeons were perhaps the most abundant birds on the planet numbering literally in the billions The flocks were so large and so dense that they blackened the skies even blotting out the sun for days at a stretch Yet by the end of the century the most common bird in North America had vanished from the wild In 1914 the last known representative of her species Martha died in a cage at the Cincinnati Zoo This stunningly illustrated book tells the astonishing story of North America s Passenger Pigeon a bird species that like the Tyrannosaur the Mammoth and the Dodo has become one of the great icons of extinction Errol Fuller describes how these fast agile and handsomely plumaged birds were immortalized by the ornithologist and painter John James Audubon and captured the imagination of writers such as James Fenimore Cooper Henry David Thoreau and Mark Twain He shows how widespread deforestation the demand for cheap and plentiful pigeon meat and the indiscriminate killing of Passenger Pigeons for sport led to their catastrophic decline Fuller provides an evocative memorial to a bird species that was once so important to the ecology of North America and reminds us of just how fragile the natural world can be Published in the centennial year of Martha s death *The Passenger Pigeon* features rare archival images as well as haunting photos of live birds

The Last Two Boštjan Videmšek, Maja Prijatelj Videmšek, 2023-08-15 Meet Najin and Fatu the last of the northern white rhinos as well as the scientists conservationists and rangers who are fighting for the species survival The last two remaining northern white rhinos an already functionally extinct species are kept behind three electrical fences and protected by a squad of rangers at the Ol Pejeta Conservancy in Kenya Their names are Najin and Fatu Both are descended from the last male northern white rhino Sudan Najin is his daughter while Fatu is his granddaughter Along with Sudan and another male named Suni they were transferred to Kenya in 2009 in the hope that returning them to their natural habitat might help them regain their zest for life and reproduction Unfortunately things didn t go to plan With the deaths of Sudan and Suni the northern white rhinos destiny is now in the hands of their Kenyan caretakers and a team of scientists at the BioRescue international consortium which is developing and using several different techniques to resurrect the species including assisted reproduction and stem cell technologies The plan is to insert northern white rhino embryos into southern white rhino surrogate mothers as soon as possible There is a real chance the first new northern white rhino baby will be born in late 2023 Will science prevail or is it too late Journalists Bo tjan Videm ek and Maja Prijatelj Videm ek explore this question

by taking readers on a journey through the history of the northern white rhinos They introduce the rangers conservationists and scientists fighting for the future of the northern white rhinos and dissect what led the species to the brink of extinction from wars and climate change to poaching and the black market The Last Two offers hope for the future of the environment and the fight to save the many species that call Earth home

The Fall of the Wild Ben A. Minteer, 2018-12-11 The passenger pigeon the great auk the Tasmanian tiger the memory of these vanished species haunts the fight against extinction Seeking to save other creatures from their fate in an age of accelerating biodiversity loss wildlife advocates have become captivated by a narrative of heroic conservation efforts A range of technological and policy strategies from the traditional such as regulations and refuges to the novel the scientific wizardry of genetic engineering and synthetic biology seemingly promise solutions to the extinction crisis In *The Fall of the Wild* Ben A. Minteer calls for reflection on the ethical dilemmas of species loss and recovery in an increasingly human driven world He asks an unsettling but necessary question Might our well meaning efforts to save and restore wildlife pose a threat to the ideal of preserving a world that isn't completely under the human thumb Minteer probes the tension between our impulse to do whatever it takes and the risk of pursuing strategies that undermine our broader commitment to the preservation of wildness From collecting wildlife specimens for museums and the wilderness aspirations of zoos to visions of assisted colonization of new habitats and high tech attempts to revive long extinct species he explores the scientific and ethical concerns vexing conservation today *The Fall of the Wild* is a nuanced treatment of the deeper moral issues underpinning the quest to save species on the brink of extinction and an accessible intervention in debates over the principles and practice of nature conservation

Endlings Lydia Pyne, 2022-08-16 Amid the historical decimation of species around the globe a new way into the language of loss An endling is the last known individual of a species when that individual dies the species becomes extinct These last individuals are poignant characters in the stories that humans tell themselves about today's Anthropocene In this evocative work Lydia Pyne explores how discussion about endlings how we tell their histories draws on deep traditions of storytelling across a variety of narrative types that go well beyond the science of these species biology or their evolutionary history *Endlings* provides a useful and thoughtful discussion of species concepts how species start and how and why they end what it means to be a charismatic species the effects of rewilding and what makes species extinction different in this era From Benjamin the thylacine to Celia the ibex to Lonesome George the Galapagos tortoise endlings Pyne shows have the power to shape how we think about grief mourning and loss amid the world's sixth mass extinction

The Demographic Imagination and the Nineteenth-Century City Nicholas Daly, 2015-03-30 Provocative account exploring how a population explosion transformed nineteenth century European and American culture creating shared narratives of urban life

Extinct Birds Julian P. Hume, 2017-08-24 A comprehensive review of the hundreds of bird species that have become extinct over the last 1 000 years of habitat degradation over hunting and rat introduction *Extinct Birds* has become the standard text on this subject covering both

familiar icons of extinction as well as more obscure birds some known from just one specimen or from travellers tales This second edition is expanded to include dozens of new species as more are constantly added to the list either through extinction or through new subfossil discoveries The book is the result of decades of research into literature and museum drawers as well as caves and subfossil deposits which often reveal birds long gone that disappeared without ever being recorded by scientists while they lived From Great Auks Carolina Parakeets and Dodos to the amazing yet almost completely vanished bird radiations of Hawaii and New Zealand via rafts of extinction in the Pacific and elsewhere this book is both a sumptuous reference and astounding testament to humanity s devastating impact on wildlife *Flock Together* B.J.

Hollars,2017-02-01 After stumbling upon a book of photographs depicting extinct animals B J Hollars became fascinated by the creatures that are no longer with us specifically extinct North American birds How he wondered could we preserve so beautifully on film what we ve failed to preserve in life And so begins his yearlong journey to find out one that leads him from bogs to art museums from archives to Christmas Counts until he at last comes as close to extinct birds as he ever will during a behind the scenes visit at the Chicago Field Museum Heartbroken by the birds we ve lost Hollars takes refuge in those that remain Armed with binoculars a field guide and knowledgeable friends he begins his transition from budding birder to environmentally conscious citizen a first step on a longer journey toward understanding the true tragedy of a bird s song silenced forever Told with charm and wit *Flock Together* is a remarkable memoir that shows how knowing the natural world even just a small part illuminates what it means to be a global citizen and how only by embracing our ecological responsibilities do we ever become fully human A moving elegy to birds we ve lost Hollars s exploration of what we can learn from extinct species will resonate in the minds of readers long beyond the final page Watch a book trailer for Hollars s newest book *Midwestern Strange* *The Hypothetical Species* Michael Charles Tobias,Jane Gray Morrison,2019-03-28 This

Examining Ecology Exercises in Environmental Biology and Conservation explains foundational ecological principles using a hands on approach that features analyzing data drawing graphs and undertaking practical exercises that simulate field work

The book provides students and lecturers with real life examples to demonstrate basic principles. The book helps students, instructors and those new to the field learn about the principles of ecology and conservation by completing a series of problems. Prior knowledge of the subject is not assumed; the work requires users to be able to perform simple calculations and draw graphs. Most of the exercises in the book have been used widely by the author's own students over a number of years and many are based on real data from published research. Exercises are succinct with a broad number of options, which is a unique feature among similar books on this topic. The book is primarily intended as a resource for students, academics and instructors studying teaching and working in zoology, ecology, biology, wildlife conservation and management, ecophysiology, behavioural ecology, population biology and ecology, environmental biology or environmental science. Students will be able to progress through the book attempting each exercise in a logical sequence beginning with basic principles and working up to more complex exercises. Alternatively, they may wish to focus on specific chapters on specialist areas, e.g. population dynamics. Many of the exercises introduce students to mathematical methods, calculations, use of formulae, drawing of graphs, calculating simple statistics. Other exercises simulate fieldwork projects, allowing users to collect and analyze data which would take considerable time and effort to collect in the field. Facilitates learning about the principles of ecology and conservation biology through succinct yet comprehensive real life examples, problems and exercises. Features authoritatively and consistently written foundational content in biodiversity, ecophysiology, behavioral ecology and more, as well as abundant and diverse cases for applied use. Functions as a means of learning ecological and conservation related principles by doing, e.g. by analyzing data, drawing graphs and undertaking practical exercises that simulate field work and more. Features approximately 150 photos and figures created and produced by the author.

Extinction and Memorial Culture Hannah Stark, 2023-06-23. This book considers how we encounter and make meaning from extinction in diverse settings and cultures. It brings together an international and interdisciplinary range of scholars to consider how extinction is memorialised in museums and cultural institutions, through monuments in literature and art, through public acts of ritual and protest, and in everyday practices. In an era in which species are becoming extinct at an unprecedented rate, we must find new ways to engage critically, creatively and courageously with species loss. *Extinction and Memorial Culture: Reckoning with Species Loss in the Anthropocene* develops the conceptual tools to think in complex ways about extinctions and their aftermath, along with providing new insights into commemorating and mourning more than human lives. This book will be of great interest to students and scholars of the environmental humanities, extinction studies, memorial culture and the Anthropocene.
