Low-Enthalpy Geothermal Resources for Power Generation D. Chandrasekharam, Jochen Bundschuh, 2008-07-01 In many developing countries the exponentially growing electricity demand can be covered by using locally available sustainable low enthalpy geothermal resources 80 150 C Such low enthalpy sources can make electricity generation more independent from oil imports or from the over dependence on hydropower Until now this huge energy resource has only been used by some developed countries like the USA Iceland and New Zealand The reason why low enthalpy geothermal resources are not used for electricity generation is that there is still a misconception that low enthalpy thermal fluids are fit only for direct application The advancement of drilling technology development of efficient heat exchangers and deployment of high sensitive binary fluids contribute to the useful application of this energy resource on a much wider scale This book focuses on all aspects of low enthalpy geothermal thermal fluids It will be an important source book for all scientists working on geothermal energy development Specifically those involved in research in developing countries rich in such thermal resources and for agencies involved in bilateral and international cooperation

Alternative Energy Resources in the MENA Region Abdellah Henni, Abdelazim Negm, Djamal Zerrouki, 2024-06-14. This book outlines the development of renewable energies in the Middle East and North Africa; it offers up-to-date information about their variability, availability and utilization and serves as a guide for understanding the MENA renewable energy potential. Readers will find an authoritative discussion about the implementation of renewable energies, trends and forecast of solar, wind and geothermal systems applications in this region. Case studies from China, Mexico and Vietnam are also included in this book to foster the implementation of renewable energies in the MENA region. The MENA region is known for its immense oil, petroleum and gas reserve, being one of the most important regions in the world for fossil energy accessibility and hence for the global economic stability. This region holds at the same time the world's greatest potential for renewable energy and over the past few years it has been receiving national and international political support for promoting the future of solar and wind power energies. However, can the region go green taking into account the availability of the natural resources? Expert contributors from countries such as United Arab Emirates, Egypt, Algeria, Turkey and Morocco provide their perspective on this challenge and offer a comprehensive overview of the latest pilot projects for renewable energy in the region. This book will appeal to researchers, students, engineers and policymakers interested in the potential of alternative energy resources in the MENA region.
