### **La Modélisation multidimensionnelle des écoulements dans les moteurs**

Thierry Baritaud,1999 With an increasingly challenging commercial environment and the need imposed by safety principles to reduce both fuel consumption and pollutant emissions the development of new engines can now benefit from the advances of computational fluid dynamics Engine CFD is a most challenging simulation problem This is caused by the spread of time and space scales the excursion amplitude of most parameters the high quasi cyclic unstationarity of engine flows the importance of minor geometry details the number of physical and chemical processes including turbulent combustion and multi phase flows to model However engine CFD has now reached a state where it has become a widely used tool not only for engine understanding but also increasingly for engine design Undoubtedly laser diagnostics in optical access engines have also brought significant help Contents 1 State of the art of multi dimensional modeling of engine reacting flows 2 Simulation of the intake and compression strokes of a motored 4 valve SI engine with a finite element code 3 A parallel unstructured mesh methodology for device scale combustion calculations 4 Large eddy simulation of in cylinder flows 5 Simulation of

engine internal flows using digital physics 6 Automatic block decomposition of parametrically changing volumes 7 Developments in spray modeling in diesel and direct injection gasoline engines 8 Cyto fluid dynamic theory of atomization processes 9 Influence of the wall temperature on the mixture preparation in DI gasoline engines 10 Simulation of cavitating flows in diesel injectors 11 Recent developments in simulations of internal flows in high pressure swirl injectors 12 3D simulation of DI diesel combustion and pollutant formation using a two component reference fuel 13 Modeling of NOx and soot formation in diesel combustion 14 Multi dimensional modeling of combustion and pollutants formation of new technology light duty diesel engines 15 3D modeling of combustion for DI SI engines 16 Combustion modeling with the G equation 17 Multi dimensional modeling of the aerodynamic and combustion in diesel engines 18 CFD aided development of a SI DI engine 19 CFD engine applications at FIAT research centre 20 Application of a detailed emission model for heavy duty diesel engine simulations 21 CFD based shape optimization of IC engine
