Green Production Toward An Environmental Rationality:

Green Production Enrique Leff, 1995-01-20 Over the last two decades the environmental cost of capital accumulation has emerged as a serious social and economic problem Many are now aware that the ways we utilize our natural and cultural resources have had a range of negative consequences internationally from the destabilization of ecosystems the depletion of resources and the degradation of our environment to the disintegration of cultural values and ethnic identity within local communities Responses to this dilemma have varied with traditional economists characterizing environmental issues as mere externalities and many ecologists focusing solely on protecting the environment Offering a far more comprehensive view Enrique Leff provides a Marxist approach to environment and development that focuses on the process of production as well as implications of the environmental crisis on human values To truly achieve a more rational and integrated use of our natural resources he convincingly argues for a reorientation of science and technology towards the objectives of sustainable development the decentralization of production and the participatory management of natural resources Life Imaginaries, Environmental Rationality, and Dialogue of Savoirs Enrique Leff, 2024-09-16 Shifting from the idea that our current environmental question arises from the history of metaphysics and its focus on Being over Life and the attendant explorations of the thought of Heidegger and Heraclitus this book unfolds a philosophical and sociological proposal for transitioning toward the sustainability of life With a focus on the imaginaries of life of indigenous peoples it moves from political ecology to a political ontology centered on the territorial cultural and existential rights of various peoples of the Earth Arguing for an environmental rationality founded on three principles the diversity of life a politics of difference and an ethics of otherness it calls for a dialogue of knowledge in a world of manifold worlds for an historical transition toward sustainability of life on our planet It will therefore appeal to scholars of sociology philosophy and political theory working on questions of social and environmental justice sustainability and alternatives to capitalism **An Ethics of Place** Mick Smith, 2001-03-29 Adopts ecological theory to critique confront and suggest solutions for contemporary cultural problems The SAGE Handbook of Economic Geography Andrew Leyshon, Roger Lee, Linda McDowell, 2011-03-04 What difference does it make to think about the economy in geographical terms The SAGE Handbook of Economic Geography illustrates the significance of thinking the economy and the economic geographically It identifies significant stages in the discipline s development and focuses on the key themes and ideas that inform present thinking in economic geography Organised in sections with multiple chapters The SAGE Handbook of Economic Geography is a complete overview of the discipline that critically assesses Location the quantitative revolution the new economic geography Geographies of globalization making sense of globalization and its consequences the geography of capitalism Geographies of scale and place local and global space and place Geographies of nature agriculture sustainable development the political ecology and the social construction of nature Geographies of uneven development economic decline technology money and finance Geographies of consumption and services formal and informal

spaces of consumption the culture industries performance Geographies of regulation and governance neo liberalism regulation welfare Placing the discipline in vivid historical and contemporary context The SAGE Handbook of Economic Geography is a timely essential work for postgraduates researchers and academics in economic geography **The Routledge Research Companion to Energy Geographies** Stefan Bouzarovski, Martin J Pasqualetti, Vanesa Castán Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives However many aspects of the black box of relationships at the energy society interface remain unopened especially in terms of the spatial underpinnings of energy production and consumption within nations cities and regions Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world Providing an integrated perspective on the complex interdependencies between energy and geography The Routledge Research Companion to Energy Geographies offers a timely conceptual framework to study the multiple facets of energy geography including security space and place planning environmental science economics and political science Illustrating how a geographic approach towards energy can aid decision making pathways in the domains of social justice and environment this book provides insights that will help move the international community toward greater cooperation stability and sustainability **Weathering Risk in Rural Mexico** Hallie Eakin, 2022-03-29 From floods and droughts to tsunamis and hurricanes recent years have seen a distressing and often devastating increase in extreme climatic events While it is possible to study these disasters from a purely scientific perspective a growing preponderance of evidence suggests that changes in the environment are related to both a shift in global economic relations and these weather related disasters In Weathering Risk in Rural Mexico Hallie Eakin draws on ethnographic data collected in three agricultural communities in rural Mexico to show how economic and climatic change not only are linked in cause and effect at the planetary scale but also interact in unpredictable and complex ways in the context of regional political and trade relationships national economic and social programs and the decision making of institutions enterprises and individuals She shows how the parallel processes of globalization and climatic change result in populations that are doubly exposed and thus particularly vulnerable Chapters trace the effects of El Niño in central Mexico in the late 1990s alongside some of the principal changes in the country's agricultural policy Eakin argues that in order to develop policies that effectively address rural poverty and agricultural development we need an improved understanding of how households cope simultaneously with various sources of uncertainty and adjust their livelihoods to accommodate evolving environmental political and economic realities *Natural Causes* James R. O'Connor, 1998-01-01 This work shows how the policies and imperatives of business and government influence and are influenced by environment and social change It examines the power of ecological Marxist analysis for grounding economic behaviour in the real world and for formulating political strategies **Sounds, Ecologies, Musics** Aaron S.

Allen, Jeff Todd Titon, 2023 *Sounds Ecologies Musics* poses exciting challenges and provides fresh opportunities for scholars scientists environmental activists musicians and listeners to consider music and sound from ecological standpoints Authors in Part I examine the natural and built environment and how music and sound are woven into it how the environment enables music and sound and how the natural and cultural production of music and sound in turn impact the environment In Part II contributors consider music and sound in relation to ecological knowledges that appear to conflict with yet may be viewed as complementary to Western science traditional and Indigenous ecological and environmental knowledges Part III features multidisciplinary and interdisciplinary approaches by scholars scientists and practitioners who probe the ecological imaginary regarding the complex ideas and contested keywords that characterize ecomusicology sound music culture society environment and nature A common theme across the book is the idea of diverse ecologies Once confined to the natural sciences the word ecology is common today in the social sciences humanities and arts yet its diverse uses have become imprecise and confusing Engaging the conflicting and complementary meanings of ecology requires embracing a both and approach Diverse ecologies are illustrated in the methodological terminological and topical variety of the chapters as well as the contributors choice of sources and their disciplinary backgrounds In times of mounting human and planetary crises *Sounds Ecologies Musics* challenges disciplinarity and broadens the interdisciplinary field of ecomusicologies These theoretical and practical studies expand sonic scholarly and political activism from the diversity equity inclusion agenda of social justice to embrace the more diverse and inclusive agenda of ecocentric ecojustice **Ecocide** Franz

Broszimer, 2002-09-20 We live in an age of ecocide Changes of enormous ecological significance are occurring on our planet the ozone layer is beginning to disintegrate Since 1970 the world's forests have almost halved A quarter of the world's fish have been depleted 70% of biologists believe the world is now in the midst of the fastest mass extinction of species in the planet's 4.5 billion year history Biodiversity loss is rated as a more serious environmental problem than the depletion of the ozone layer global warming or pollution and contamination How have we come to this and what can be done to conserve our environment for the future *Ecocide* examines the facts behind the figures to offer a disturbing account of the ecological impact that the human species has on the planet It shows how we are wilfully destroying our world Highlighting important countermovements who are working for ecological democracy this unique book is essential for anyone who cares about conserving our environment for the future *The Environmentalism of the Poor* Joan Martínez-Alier, 2003-01-01 This is a

wonderful book rich in empirical detail full of theoretical insights offering hope in a bleak world altogether inspiring a tremendous achievement of having helped to create the disciplines of ecological economics and political ecology bringing them alive in this book and making their insights available to the developing worldwide movement for environmental justice Pat Devine *Environmental Values* Any book by the ecological economist Joan Martinez Alier is a Big Publishing Event this is a book by a writer who loves his subject knows it well respects its history and is driven by the desire to do justice These are

Environment Politics The book is a worthy and in depth contribution to debates about political ecology and ecological
economics It should be read by all environmental and ecological economists who wish to make their analysis more relevant
Tim Forsyth Progress in Development Studies A marvellous combination of insight research and activism A must read for
policymakers practitioners and academics alike and for anyone concerned with sustainable development environmentalism or
poverty alleviation Human Ecology Journal one of the most important environmental books to have been published recently
Martinez Alier integrates two of the most significant areas of environmental theory political ecology and ecological
economics Eurig Scandrett Friends of the Earth Scotland The book has three main strengths its bibliography which is
extensive the global perspective on the environmental movement and the relationship with poverty and the general theme of
this interdisciplinary work which is not so much to provide new information but to consider the existing information in a new
light Martinez Alier is to be commended for taking such a step in the literature the writing style is extremely approachable
Recommended B J Peterson Choice Joan Martinez Alier combines the honest discipline of a scholar with the passionate
energy of an activist The result *The Environmentalism of the Poor* is highly recommended Herman E Daly University of
Maryland College Park US *The Environmentalism of the Poor* has the explicit intention of helping to establish two emerging
fields of study political ecology and ecological economics whilst also investigating the relations between them The book
analyses several manifestations of the growing environmental justice movement and also of popular environmentalism and
the environmentalism of the poor which will be seen in the coming decades as driving forces in the process to achieve an
ecologically sustainable society The author studies in detail many ecological distribution conflicts in history and at present in
urban and rural settings showing how poor people often favour resource conservation The environment is thus not so much a
luxury of the rich as a necessity of the poor It concludes with the fundamental questions who has the right to impose a
language of valuation and who has the power to simplify complexity Joan Martinez Alier combines the study of ecological
conflicts and the study of environmental valuation in a totally original approach that will appeal to a wide cross section of
academics ecologists and environmentalists *The Philosophical Foundations of Ecological Civilization* Arran
Gare, 2016-08-05 The global ecological crisis is the greatest challenge humanity has ever had to confront and humanity is
failing The triumph of the neo liberal agenda together with a debauched scientism has reduced nature and people to nothing
but raw materials instruments and consumers to be efficiently managed in a global market dominated by corporate managers
media moguls and technocrats The arts and the humanities have been devalued genuine science has been crippled and the
quest for autonomy and democracy undermined The resultant trajectory towards global ecological destruction appears
inexorable and neither governments nor environmental movements have significantly altered this or indeed seem able to *The
Philosophical Foundations of Ecological Civilization* is a wide ranging and scholarly analysis of this failure This book reframes

the dynamics of the debate beyond the discourses of economics politics and techno science Reviving natural philosophy to align science with the humanities it offers the categories required to reform our modes of existence and our institutions so that we augment rather than undermine the life of the ecosystems of which we are part From this philosophical foundation the author puts forth a manifesto for transforming our culture into one which could provide an effective global environmental movement and provide the foundations for a global ecological civilization

Living with Nature Frank Fischer,Maarten Hajer,1999-06-24 Despite the optimism of the Earth Summit held in Rio de Janeiro in 1992 the politics of environmental sustainable development has reached an impasse Why do issues of environmental protection continue to take a back seat to economic competition particularly in the international realm Once the environmental problem was widely recognised it was held that consensus could be reached In practice however the development of sustainability had often continued to merely extend earlier technocratic practices and solutions which fail to take into consideration the specific cultural questions Living With Nature seeks to place the question of the dynamics of environmental crisis within a socio cultural dimension of the existing economic and political institutions The book argues for a need to find a new balance between a theoretical analysis of the debate and an appreciation of local circumstances norms and knowledge Politically it implies an implicit understanding of the way in which we live together with nature

Marketing Apocalypse Jim Bell,Stephen Brown,David Carson,2003-09-02 The present volume of essays examines the extent to which the end of marketing is nigh The authors explore the present state of marketing scholarship and put forward a variety of visions of marketing in the twenty first century Ranging from narratology to feminism these suggestions are always enlightening often provocative and occasionally outrageous Marketing Apocalypse is required reading for anyone interested in the future of marketing

Political Ecology Enrique Leff,2021-02-23 This book offers a conceptual framework for the critical understanding of the present socio environmental conflicts It reflects on the evolution

of subject and thought a shift in environmental thinking triggered by the development of eco territorial conflicts and the social responses given to the environmental question Bringing together 40 years of the authors writing and research the book explores the transition from ecological economics and historical materialism to ecological Marxism It unpacks the forging of political ecology from value theory in political economy to ecological distribution and ecologies of difference a transition to an environmental rationality grounded in the ontology of diversity a politics of difference and an ethics of otherness This evolution in thinking gives consistency to a theoretical discourse able to respond to the territorial conflicts generated by the radicalization of the environmental question as a key social issue of our times The book is a call to respond to the urgent challenge of reversing the tendency towards the entropic death of the planet and to building a sustainable world order

The Nightcrawlers Joshua Steckley, 2025 How does a banal earthworm become a valuable commodity Lumbricus terrestris otherwise known as the Canadian nightcrawler is the most popular live bait used by recreational anglers throughout the world Each year as many as seven hundred million worms are handpicked from Ontario farmland for the bait market earning the region the undisputed title of worm capital of the world The Nightcrawlers goes deep into the empirical underground to see how capital confronts a diverse cast of human and nonhuman characters stubborn worms wealthy dairy farmers and their precious cow manure immigrant pickers laboring at night and worm wholesalers who undercut each other through tax fraud and money laundering This eccentric tale of worms cows and cash reveals the inherent contradictions in capitalism s attempts to commodify the living world including the soil organisms that are inches beneath our feet

Industrial Ecology Stanley E. Manahan, 2017-11-01 Industrial ecology may be a relatively new concept yet it s already proven instrumental for solving a wide variety of problems involving pollution and hazardous waste especially where available material resources have been limited By treating industrial systems in a manner that parallels ecological systems in nature industrial ecology provides a substantial addition to the technologies of environmental chemistry Stanley E Manahan bestselling author of many environmental chemistry books for Lewis Publishers now examines Industrial Ecology Environmental Chemistry and Hazardous Waste His study of this innovative technology uses an overall framework of industrial ecology to cover hazardous wastes from an environmental chemistry perspective Chapters one to seven focus on how industrial ecology relates to environmental science and technology with consideration of the anthrosphere as one of five major environmental spheres Subsequent chapters deal specifically with hazardous substances and hazardous waste as they relate to industrial ecology and environmental chemistry
