*Architecture and Fire* Stamatis Zografos, 2019-06-12 *Architecture and Fire* develops a conceptual reassessment of architectural conservation through the study of the intimate relationship between architecture and fire Stamatis Zografos expands on the general agreement among many theorists that the primitive hut was erected around fire locating fire as the first memory of architecture at the very beginning of architectural evolution Following the introduction Zografos analyses the archive and the renewed interest in the study of archives through the psychoanalysis of Jacques Derrida He moves on to explore the ambivalent nature of fire employing the conflicting philosophies of Gaston Bachelard and Henri Bergson to do so before discussing architectural conservation and the relationship between listed buildings the function of archives and the preservation of memories from the past The following chapter investigates how architecture evolves by absorbing and accommodating fire while the penultimate chapter examines the critical moment of architectural evolution the destruction of buildings by fire with a focus on the tragic disaster at London's Grenfell Tower in 2017 Zografos concludes with thoughts on Freud's drive theory He argues the practice of architectural conservation is an expression of the life drive and a simultaneous repression of the death drive which suggests controlled destruction should be an integral part of the conservation agenda *Architecture and Fire* is founded in new interdisciplinary research navigating across the boundaries of architecture conservation archival theory classical mythology evolutionary theory thermodynamics philosophy and psychoanalysis It will be of interest to readers working in and around these disciplines
