Manual Of Forensic Taphonomy Author James T Pokines Oct 2013:

Manual of Forensic Taphonomy James T. Pokines, Ericka N. L'Abbe, Steven A. Symes, 2021-12-30 The main goals in any forensic skeletal analysis are to answer who is the person represented individualization how that person died trauma pathology and when that person died the postmortem interval or PMI The analyses necessary to generate the biological profile include the determination of human nonhuman or nonosseous origin the minimum number of individuals represented age at death sex stature ancestry perimortem trauma antemortem trauma osseous pathology odontology and taphonomic effects the postmortem modifications to a set of remains The Manual of Forensic Taphonomy Second Edition covers the fundamental principles of these postmortem changes encountered during case analysis Taphonomic processes can be highly destructive and subtract information from bones regarding their utility in determining other aspects of the biological profile but they also can add information regarding the entire postmortem history of the remains and the relative timing of those effects The taphonomic analyses outlined provide guidance on how to separate natural agencies from human caused trauma These analyses are also performed in conjunction with the field processing of recovery scenes and the interpretation of the site formation and their postdepositional history The individual chapters categorize these alterations to skeletal remains illustrate and explain their significance and demonstrate differential diagnosis among them Such observations may then be combined into higher order patterns to aid forensic investigators in determining what happened to those remains in the interval from death to analysis including the environments in which the remains were deposited including buried terrestrial surface marine freshwater or cultural contexts Features Provides nearly 300 full color illustrations of both common and rare taphonomic effects to bones derived from actual forensic cases Presents new research including experimentation on recovery rates during surface search timing of marine alterations trophy skulls taphonomic laboratory and field methods laws regarding the relative timing of taphonomic effects reptile taphonomy human decomposition and microscopic alterations by invertebrates to bones Explains and illustrates common taphonomic effects and clarifies standard terminology for uniformity and usage within in the field While the book is primarily focused upon large vertebrate and specifically human skeletal remains it effectively synthesizes data from human ethological geological paleontological paleoanthropological archaeological artifactual and zooarchaeological studies Since these taphonomic processes affect other vertebrates in similar manners The Manual of Forensic Taphonomy Second Edition will be invaluable to a broad set of forensic and investigative disciplines Manual of Forensic Taphonomy Taylor & Francis Group, 2021-03-31 Forensic taphonomy is the study of the postmortem changes to human remains focusing largely on environmental effects including decomposition in soil and water and interaction with plants insects and other animals While other books have focused on subsets such as forensic botany and entomology Manual of Forensic Taphonomy is the first update of the entire domain in more than ten years and the first book to consider distinguishing among multiple types of taphonomic changes Edited by two of the most distinguished experts in

the field this volume examines taphonomic alterations to bone and related taphonomic processes common to cases of forensic interest Specific chapters address a range of issues related to Varying burial environments Animal scavenging and transport Fluvial and human transport Cultural modifications Marine environments Subaerial weathering Thermal alteration Recovery methods used in collecting the remains The book discusses inherent variations in survivability of different bones degradation of DNA in different environments and organisms involved in soft tissue decomposition which result in skeletonization It also describes microscopic alterations color changes macroscopic physical damage of multiple types and bone loss through dispersal away from the location of initial body deposition The authors present methods that can be employed to determine the timing of taphonomic damage perimortem vs postmortem as well as checklists for the collection of microscopic and macroscopic taphonomic data The ability to recognize taphonomic characteristics and discriminate between osseous alterations with similar appearances but dissimilar origins is essential to those engaged in the analysis of skeletal remains This volume is an ideal guide for students and non specialists as well as a reference manual for professionals **A**
