Atkinson, 2003-11-04 This book provides practical and buildable solutions for the design of foundations for housing and other low rise buildings especially those on abnormal or poor ground A wealth of expert information and advice is brought together dealing with the key aspects a designer must consider in order to achieve effective and economic foundation designs This second edition of Structural Foundations Manual for Low Rise Buildings has been completely updated in line with the new government guidelines on contaminated land and brown field sites The book includes well detailed design solutions and calculations actual case histories illustrations design charts and check lists making it a user friendly reference for contractors structural engineers architects and students who have to deal with foundations for low rise buildings on sites with difficult ground conditions

Structural Foundation Designers' Manual W. G. Curtin, Gerry Shaw, Gary Parkinson, J. Golding, Norman Seward, 2008-04-15 This manual for civil and structural engineers aims to simplify as much as possible a complex subject which is often treated too theoretically by explaining in a practical way how to provide uncomplicated buildable and economical foundations It explains simply clearly and with numerous worked examples how economic foundation design is achieved It deals with both straightforward and difficult sites following the process through site investigation foundation selection and finally design The book includes chapters on many aspects of foundation engineering that most other books avoid including filled and contaminated sites mining and other man made conditions features a step by step procedure for the design of lightweight and flexible rafts to fill the gap in guidance in this much neglected yet extremely economical foundation solution concentrates on foundations for building structures rather than the larger civil engineering foundations includes many innovative and economic solutions developed and used by the authors practice but not often covered in other publications provides an extensive series of appendices as a valuable reference source For the Second Edition the chapter on contaminated and derelict sites has been updated to take account of the latest guidelines on the subject including BS 10175 Elsewhere throughout the book references have been updated to take account of the latest technical publications and relevant British Standards

Model Uncertainties in Foundation Design Chong Tang,Kok-Kwang Phoon,2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal

Foundation Design Allan Hodgkinson,2013-08-30 Foundation Design discusses fundamental concepts in the design of foundations As with the author s previous work the AJ Handbook of Building Structure the emphasis is on practical matters and while every architect may not aspire to more complicated designs with the aid of this book he will be able to talk with more authority to his engineer The book begins with an introduction to the properties rocks and soils including sands and gravels clays and silts and peat This is followed by discussions of the site investigation process soil mechanics and the principles of foundation design Separate chapters cover foundation types spread foundations and piles foundation hazards and construction problems and underpinning Examples of foundation design are presented such as simple bases a column on the edge of a building and examples of piling The final two chapters discuss specifications for mass bases reinforced pads and trench foundations and pile caps information to be given when inviting piling tenders and the supervision of site works

Design of Shallow and Deep Foundations Roger Frank,Fahd Cui,Sébastien Burlon,2021-08-19 Design of Shallow and Deep Foundations introduces the concept of limit state calculations before focusing on shallow and deep foundations The limit state combinations of actions are examined and

practical calculation models of the bearing capacity and of the settlement are presented particularly from the results of Ménard pressuremeter tests and cone penetration tests Attention is also given to the use of numerical methods which has been developed over the past twenty years It provides an overview of various elements of ground structure interaction that are pertinent for a refined design of both shallow and deep foundations such as allowable displacements of structures and ground structure couplings This guide will be useful to practising engineers and experts in design offices contracting companies and administrations as well as students and researchers in civil engineering Though its focus is generally on the French practice it is more widely applicable to design based on or generally in line with Eurocode 7 with references to BS ENs Roger Frank is an Honorary Professor at Ecole Nationale des Ponts et Chaussées ENPC From 1998 to 2004 he chaired the committee on Eurocode 7 on Geotechnical design Fahd Cui is the Scientific Director of Terrasol Setec group France Since 2018 he has been in charge of the course on the design of geotechnical structures at ENPC Sébastien Burlon is a Project Director at Terrasol Setec group France He is involved in the evolution of Eurocode 7 and teaches several geotechnical courses especially at ENPC
