**Gloster Aircraft Since 1917** Derek N. James, 1971 Fort ller om Glosterfabrikkernes start og udvikling samt om alle de forskellige fly der har været produceret og om resultater opnået med disse *Aircraft* David Pascoe, 2004-09-03 In his celebrated manifesto *Aircraft* 1935 the architect Le Corbusier presented more than 100 photographs celebrating airplanes either in imperious flight or elegantly at rest Dwelling on the artfully abstracted shapes of noses wings and tails he declared Ponder a moment on the truth of these objects Clearness of function In *Aircraft* David Pascoe follows this lead and offers a startling new account of the form of the airplane an object that in the course of a hundred years has developed from a flimsy contraption of wood wire and canvas into a machine compounded of exotic materials whose wings can touch the edges of space Tracing the airplane through the twentieth century he considers the subject from a number of perspectives as an inspiration for artists architects and politicians as a miracle of engineering as a product of industrialized culture as a device of military ambition and finally in its clearness of function as an instance of sublime technology Profusely illustrated and authoritatively written *Aircraft* offers not just a fresh account of aeronautical design documenting in particular the forms of earlier flying machines and the dependence of later projects upon them but also provides a cultural history of an object whose very shape contains the dreams and nightmares of the modern age *The RAF and Aircraft Design, 1923-1939* Colin Sinnott, 2001 This work describes the vital role of the Air Ministry in the development of the RAF's fighters and bombers before WWII *The Jet Race and the Second World War* S. Mike Pavelec, 2007-02-28 In the 1930s as nations braced for war the German military build up caught Britain and the United States off guard particularly in aviation technology The unending quest for speed resulted in the need for radical alternatives to piston engines In Germany Dr Hans von Ohain was the first to complete a flight worthy turbojet engine for aircraft It was installed in a Heinkel designed aircraft and the Germans began the jet age on August 27 1939 The Germans led the jet race throughout the war and were the first to produce jet aircraft for combat operations In England the doggedly determined Frank Whittle also developed a turbojet engine but without the support enjoyed by his German counterpart The British came second in the jet race when Whittle's engine powered the Gloster Pioneer on May 15 1941 The Whittle Gloster relationship continued and produced the only Allied combat jet aircraft during the war the Meteor which was relegated to Home Defense in Britain In America General Electric copied the Whittle designs and Bell Aircraft contracted to build the first American jet plane On October 1 1942 a lackluster performance from the Bell Airacomet ushered in the American jet age The Yanks forged ahead and had numerous engine and airframe programs in development by the end of the war But the Germans did it right and did it first while the Allies lagged throughout the war only rising to technological prominence on the ashes of the German defeat Pavelec's analysis of the jet race uncovers all the excitement in the high stakes race to develop effective jet engines for warfare and transport **Bristol and Gloucestershire Aerospace Industry** Steph Gillett, 2017-10-15 Steph Gillett explores the fascinating history of aviation

in the Bristol and Gloucestershire area

**The RAF and Aircraft Design** Colin S Sinnott, 2014-05-22 This work examines the evolution of the RAF's operational requirements for its home defence air force for bombers to mount a deterrent counter offensive and for fighters to provide direct defence of Britain. It discusses the management processes, policies and decisions relevant to operational requirements on the basis of a detailed study of Air Ministry papers of the time. By tracing the development of operational requirements, the author exposes the thinking behind the RAF's quest for effective fighter and bomber aircraft. He describes the ideas and concepts of air warfare that were adopted in the 1920s and shows how these evolved into the Air Staff's requirements for the aircraft which the RAF entered and fought in World War II.

**The History of Air Intercept Radar & the British Nightfighter 1935-1959** Ian White, 2007-05-30 This detailed history of Air Intercept radar traces the development of this vital military technology with the Royal Air Force during WWII. In the years after World War I, the United Kingdom was desperate to develop some form of protection from an enemy air strike. As early as 1923, the British Army had devised sound mirrors that could detect aircraft up to twelve miles away. This technical history traces the development of military radar technology from this early experimental phase to the creation of the first air-to-air radar systems and their uses in battle. Historian Ian White sets this fascinating narrative within the larger political, military, economic and technological context of the era. Through World War II, Air Intercept radar was a vital asset in protecting RAF bomber forces as well as the country itself. But developing the technology required the tireless work of physicists and engineers in the Air Ministry Research Establishment, particularly members of the Establishment's Airborne Group working under Dr Edward Bowen. Their Airborne Interception radars, such as the AI Mk IV, were used in Blenheim night fighters during the winter Blitz and by Mosquito during the Baedeker Raids. This in-depth history covers the introduction of centimetric technology at the Telecommunications Research Establishment, the creation of centimetric AI and their installation in the Beaufighter and later marks of the Mosquito. It describes the creation of the Radiation Laboratory at MIT and concludes with a section on further developments during the Cold War.

**From Nighthawk to Spitfire** John K. Shelton, 2015-07-06 R. J. Mitchell was virtually self-taught and almost all his aircraft were slow flying seaplanes. The story of how this man from the landlocked Midlands, apprenticed to a locomotive works, became responsible for the Spitfire is a great tale in itself. This detailed book tells us how Mitchell learned his trade, contributing to the production of the cumbersome Nighthawk designed to combat the German Zeppelin threat and gradually coming to produce record-breaking racing floatplanes that won outright the prestigious international Schneider Trophy. Mitchell was thus well placed to design a high speed aircraft when war was imminent, however, as John K. Shelton reveals, the production of the famous fighter was by no means a certainty and its vital contribution to winning the Battle of Britain was a very close-run thing.

**British Military Test and Evaluation Aircraft** Malcolm V. Lowe, 2019-09-30 An attractive book chock full with photos and drawings of all the planes that have been drawn and built in these years in the UK. AviationBookReviews.com. It could be argued that the heyday

of British military aircraft flight testing began in the 1940s and continued throughout the three decades that followed during the so called Cold War period As such the authors have purposely chosen to focus on the first 30 years The Golden Years 1945 to 1975 from the end of World War Two until the mid 1970s This was arguably the most exciting period with many wonderful and new types rubbing shoulders with wartime and immediate postwar designs that were utilized for development purposes making for an eclectic mix of shapes and color schemes Alongside the technical aspects of military testing and development are the many and varied color schemes and markings carried by the aircraft themselves not only by the brand new experimental designs but by existing production machines suitably modified to greater or lesser degrees to develop the technical advances in systems and weaponry Scores of different aircraft types are covered in British Military Test and Evaluation Aircraft The Golden Years 1945 1975 with over 65 rarely seen contemporary photographs from private collections and differing slightly from previous Flight Craft book formats over 50 pages of specially commissioned full color profiles and plan views visually chronicling the diverse range of color schemes and markings applied to these fascinating airplanes The development of British military aircraft is examined in extraordinary and fascinating detail in Malcolm Lowe s spectacular book Books Monthly *International Warbirds* John C. Fredriksen,2001-08-01 In depth descriptions and photographs of the aircraft of 21 nations presented with a unique human dimension that goes behind the machines to the people involved Invaluable for specialists accessible to enthusiasts *International Warbirds An Illustrated Guide to World Military Aircraft 1914 2000* puts the most legendary fighter aircraft of the 20th century developed outside the United States on vivid display It offers 336 illustrated biographies of the most significant warplanes used in squadron service from World War I to the Balkan conflict including numerous models from Great Britain France Russia and Japan as well as notable machines from Israel Canada China India Brazil and other nations Entries span the history and scope of military aircraft from bombers and fighters to transports trainers reconnaissance craft sea planes and helicopters with each capsule history combining nuts and bolts technical data with the story of that model s evolution and use Together these portraits offer an exciting well researched tribute to visionary designers and builders as well as courageous pilots and crews across the globe and tell a vivid tale of how air power became such a decisive factor in modern warfare *Airplane Design: Preliminary configuration design and integration of the propulsion system* Jan Roskam,1985 *British Imperial Air Power* Alex M Spencer,2020-06-15 *British Imperial Air Power* examines the air defense of Australia and New Zealand during the interwar period It also demonstrates the difficulty of applying new military aviation technology to the defense of the global Empire and provides insight into the nature of the political relationship between the Pacific Dominions and Britain Following World War I both Dominions sought greater independence in defense and foreign policy Public aversion to military matters and the economic dislocation resulting from the war and later the Depression left little money that could be provided for their respective air forces As a result the Empire s air services spent the entire interwar period attempting to create a strategy in the face of these

handicaps In order to survive the British Empire's military air forces offered themselves as a practical and economical third option in the defense of Britain's global Empire intending to replace the Royal Navy and British Army as the traditional pillars of imperial defense

**Gloster Aircraft Company** Derek James,2014-03-24 The Gloster Aircraft Company had its foundation in 1917 and in 1934 the company was taken over by Hawker Aircraft though it continued to produce aircraft under its own name In that same year the company produced the famous Gladiator biplane Having no modern designs of its own in production Gloster undertook manufacture for the parent company Hawker During the Second World War it built more than 6 000 Hurricanes and Typhoons The Gloster Meteor was the first operational Allied jet fighter aircraft of the Second World War commencing operations in mid 1944 only some weeks later than the world's first operational jet the German Messerschmitt Me 262 In 1945 a Meteor gained a World Airspeed Record of 606 mph Meteors remained in service with several air forces and saw action in the Korean War In 1952 the two seat delta winged Gloster Javelin was developed as an all weather fighter that could fly above 50 000 feet In 1961 the company was merged with Sir W G Armstrong Whitworth Aircraft Limited to form Whitworth Gloster Aircraft Limited Following re organisation the firm became part of the Avro Whitworth Division of Hawker Siddeley Aviation in 1963 and the name Gloster disappeared

*Reinventing the Propeller* Jeremy R. Kinney,2017-03-24 An international community of specialists reinvented the propeller during the Aeronautical Revolution a vibrant period of innovation in North

America and Europe from World War I to the end of World War II They experienced both success and failure as they created competing designs that enabled increasingly sophisticated and modern commercial and military aircraft to climb quicker and cruise faster using less power Reinventing the Propeller nimbly moves from the minds of these inventors to their drawing boards workshops research and development facilities and factories and then shows us how their work performed in the air both commercially and militarily Reinventing the Propeller documents this story of a forgotten technology to reveal new perspectives on engineering research and development design and the multi layered social cultural financial commercial industrial and military infrastructure of aviation

**Rearming the RAF for the Second World War** Adrian Phillips,2022-07-28 When the RAF rearmed to meet the growing threat from Nazi Germany s remorseless expansion in the late 1930s it faced immense challenges It had to manage a huge increase in size as well as mastering rapid advances in aviation technology To protect Britain from attack the RAF s commanders had to choose the right strategy and the right balance in its forces The choices had to be made in peacetime with no guidance from combat experience These visions then had to be translated into practical reality A shifting cast of government ministers civil servants and industrialists with their own financial political and military agendas brought further dynamics into play The RAF s readiness for war was crucial to Britain s ability to respond to Nazi aggression before war broke out and when it did the RAF

s rearmament was put to the acid test of battle Adrian Phillips uses the penetrating grasp of how top level decisions are made that he honed in his inside accounts of the abdication crisis and appeasement to dissect the process which shaped the RAF of 1940 He looks beyond the familiar legends of the Battle of Britain and explores in depth the successes and failures of a vital element in British preparations for war
