The Meme Machine Susan J. Blackmore,1999 Memes are ideas behaviours or skills that are transferred from one person to another by imitation The term was coined by Richard Dawkins in his bestselling The Selfish Gene OUP 1976 in which he described how biological design arises as genes compete selfishly to replicate themselves In his final chapter Dawkins suggested that memes are also replicators and that they compete to get themselves copied into as many brains as possible Examples include tunes catch phrases clothes fashions and new ways of building arches If memes are true replicators then our minds are fashioned by memes just as our bodies are fashioned by genes After twenty years the word meme is to be included in the next edition of the Oxford English Dictionary However most academics avoid the word and a true science of memetics has not yet developed This book will lay the foundations for such a science starting with a clear definition of the meme and applying the principles of general evolutionary theory to understanding memetic selection This approach provides new theories of memetic altruism the development of language and the origins of the enormous human brain
