Wallis,1985 **Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome** Sergio Salvatore,Wolfgang Tschacher,Omar Carlo Gioacchino Gelo,Sabine C Koch,2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology s understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena

such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences Scientific and Technical Aerospace Reports ,1988 **Overexploitation and Contamination of Shared Groundwater Resources** Christophe J.G.
