The user has always been able to read important signs off his **CLOCK** pistol at a glance. Trigger forward = safety activated. Trigger pulled = safety deactivated. Under all circumstances, the pistol must be treated as if it is loaded.

The pistol also indicates to GLOCK users that a round may be in the chamber of the pistol. The extractor of the pistol provides a visual and tactile indication of a loaded chamber. When the chamber is unloaded the extractor is depressed (Fig. 1) and when the chamber is loaded the extractor pivots out from the slide (Fig. 2).

SAFETY WARNING:

GLOCK users must not rely only upon a protruding extractor to confirm that a round is in the chamber. In addition, GLOCK users must not rely only upon the fact that the extractor is not protruding from the slide to confirm an empty chamber to the exclusion of manually checking the chamber. The surest method to determine the absence of a round in the chamber is to visually and manually check the chamber of the pistol by pulling and locking the slide to the rear as indicated in the Instructions for Use Manual provided with every GLOCK pistol unit.²

It's the first study to demonstrate that in those who do not exhibit symptoms of a viral infection, there can be antibodies to either the IgG or IgM of the disease. This new research suggests to the physicians and general public, at least in some cases, that the virus negative will not mean in people can fight off the infectious disease.
