1. The first step in the process of the cell cycle is the G<sub>1</sub> phase, during which the cell grows and prepares for division. This phase is characterized by the synthesis of proteins and the replication of DNA.
2. The second step is the S phase, where DNA replication occurs. The cell's DNA is duplicated, resulting in two identical copies of the genome.
3. The third step is the G<sub>2</sub> phase, where the cell continues to grow and prepares for the final division. This phase is characterized by the synthesis of more proteins and the replication of organelles.
4. The final step is the M phase, where the cell divides into two daughter cells. This process is called mitosis and involves the separation of the replicated DNA and the division of the cytoplasm.
