

The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde motion is the apparent change in direction of a planet's motion as seen from Earth. This occurs because the Earth and the planet are both moving in their orbits around the Sun. When the Earth overtakes the planet, the planet appears to move in the opposite direction to its normal motion.

4) Explain why we see Mars and not some of the Jovian planets for this retrograde.

The Jovian planets are much farther away and their orbits take longer, so the retrograde would be harder to readily see.
