Landscape Ecology Of Small Mammals:

Landscape Ecology of Small Mammals Gary W. Barrett, John D. Peles, 1999-06-04 A summary of much of the experimental work on the spatial ecology of small mammals This field has entered an exciting stage with such new techniques as GIS and systems modeling becoming available Leading contributors describe and analyze the most well known case studies and provide new insights into how landscape patterns and processes have had an impact on small mammals and how small mammals have in turn affected landscape structure and composition

Landscape Ecology of Small Mammals Gary W. Barrett, John D. Peles, 2013-03-19 Small mammals can be regarded as excellent subjects to test suppositions about population growth migration and reproduction and in particular on how the complex physical structure of the environment affects the ecology of populations and communities In other words these small mammal studies can help formulate landscape ecological principles This book summarizes a great deal of experimental work on the spatial ecology of small mammals The field has entered an exciting stage with several new techniques such as GIS and systems modeling becoming available Leading contributors describe and analyze the most well known case studies and provide new insights into how landscape patterns and processes have had an impact on small mammals and how small mammals have in turn affected landscape structure and composition

Landscape Approaches in Mammalian Ecology and Conservation William Zander Lidicker, 1995 This book explores the latest ideas about landscapes as they apply to mammalian ecology and conservation The Contributors examine mammalian field studies and experimental model systems to landscape ecology and then present data on the use of such experimental protocols With its international perspective and incisive coverage this volume will be an essential resource for anyone concerned with mammalian and landscape ecology

Small Mammals in Their Environment Jessemine Lee-Saa Fung, 2000 We report on the status and behaviors of grasslands small mammals existing in Camp Dodge Iowa Although Camp Dodge is one of the few places left in central Iowa containing relatively large intact pieces of grasslands it is still affected by direct and indirect human interference Pressure to clear and row crop so much for the agricultural practices increases stress on the native flora and fauna Unless we pay attention to Iowa's rapidly diminishing natural habitats the state's unique blend of flora and fauna will be lost forever Because the world is composed of landscapes spatial mosaics are the focus of landscape ecology From an ecological perspective landscape ecology offers a way to consider environmental heterogeneity or patchiness in spatially explicit terms As we lose more contiguous natural habitats through anthropogenic processes analyzing species movement patterns and behaviors is essential to interpreting their response to habitat fragmentation We use the landscape ecology approach to look at the behavioral ecology of small grassland mammals in a fragmented landscape

Ecology, Cognition and Landscape

Almo Farina,2009-11-23 It is more and more evident that our living system is completely disturbed by human intrusion Such intrusion affects the functioning of entire systems in ways we do not yet fully understand We use paradigms such as the disturbance to cover large and deep gaps in our scientific knowledge Human ecology is an uncertain terrain for anthropologists geographers and ecologists and rarely is expanded to include the social and economic realms The integration of different disciplines and the application of their many paradigms to problems of environmental complexity remains a distant goal despite the many efforts that have been made to achieve it Philosophical and semantic barriers are erected when such integration is pursued by pioneering scientists Recently evolutionary ecology has shown great interest in the spatial processes well described by the emerging discipline of landscape ecology But this interest takes the form of pure curiosity or at worst of skepticism toward the real capacity of landscape ecology to contribute to the advancement of ecological science The past two centuries have been characterized by huge changes occurring in the entire ecosphere Global changes are the effects of human intervention at a planetary scale with consequent degradation of the environment creating an ecological debt for future generations On the other side of the issue new technologies have improved the welfare of billions of people and have given hope to many other billions that they may also see such improvement in the near future Living Rivers: Trends and Challenges in Science and Management R.S.E.W. Leuven,A.M.J. Ragas,A.J.M. Smits,G.van der Velde,2007-12-20 All over the world sustainable river basin management is a leading principle of policy plans and legal instruments for water management e.g the European Water Framework Directive The evidence however to underpin the full scope of sustainability is rather scanty In this book an integrative perspective on trends and challenges in river science and management is demonstrated The three pillars underneath sustainable water management ecology economy and sociology are elaborated by experts in their fields A number of papers integrate the current knowledge on the structure functioning and management of living rivers The book includes data and experiences concerning the rivers Allier Meuse Rhine Sava and Tagliamento in Europe and the river Illinois in the USA Sustainable river basin management asks for an orthodox rehabilitation programmes and ecosystem based and transboundary management approaches **How Landscapes Change** Gay A. Bradshaw,Pablo A. Marquet,2013-03-09 North and South America share similar human and ecological histories and increasingly economic and social linkages As such issues of ecosystem functions and disruptions form a common thread among these cultures This volume synthesizes the perspectives of several disciplines such as ecology anthropology economy and conservation biology The chief goal is to gain an understanding of how human and ecological processes interact to affect ecosystem functions and species in the Americas Throughout the text the emphasis is placed on habitat fragmentation At the same time the book provides an overview of current theory methods and approaches used in the analysis of ecosystem disruptions and fragmentation
