Landscapes And Cycles An Environmentalists Journey To Climate Skepticism:

Landscapes & Cycles Jim Steele, 2013-06-01 *Landscapes and cycles* demonstrates why landscape change far more than the levels of carbon dioxide deserve our full attention. *Landscapes and cycles* is easily understood by the layperson. It outlines how to build a more resilient environment and provides the perspective method needed to critically appraise the overzealous catastrophic predictions that dominate the media. It will enlighten anyone concerned about climate change and the fate of endangered species. Page 4 of cover

Doubt and Certainty in Climate Science Alan Longhurst, 2023-03-15 In *Doubt and Certainty in Climate Science* well known oceanographer Alan Longhurst offers a unique vision of climate change and its scientific study. His deep knowledge of oceanographic research, fishery productivity and marine ecological changes over several centuries made him doubt some of the postulates of climate science by scientists working on computers with only a few decades of data. In this book the author reviews what scientists know about climate change, the known unknowns and the unknown unknowns that give rise to uncertainties about future climate change that is causing far reaching social and political change. Longhurst provides an incisive critical review of numerous topics in climate change. Beginning with a review of some regional temperature measurements, he questions the robustness of the leading indicator of climate change, a global average of widely differing measurements of sea and land surface temperature. The book offers unique insights worthy of consideration by those seeking to understand climate change, particularly the important role of the oceans in climate.

CLIMATE CHANGE Jim Hollingsworth, 2020-01-10 Will the World Really End Unless We Spend Billions on Climate Change Policy? The people around us are somehow convinced that the world is about to end unless we stop using fossil fuels. There is no scientific evidence to support this. This book explains why this belief is simply not true in terms anyone can understand. Fossil fuels have made America great. This book explains why we need to keep it that way. **Living**

Dangerously Rick Joyner, 2014-10-16 The issue of climate change is an ongoing debate and it is a crucial issue that will affect us all. *Living Dangerously* is about Rick Joyner's journey to understand climate change and determine if it is real. He learned far more than he expected and the implications are more far reaching than imagined. **Hubris: The Troubling Science, Economics, and Politics of Climate Change** Michael Hart, 2015-09-29 The book explores problems and issues that have emerged in national and international discussion of policies to address climate change. It concludes that every solution put forward by the UN and activists poses more problems than might ever emerge from the marginal human impact on natural climate change. Rather than mitigation, governments should focus on adaptation. As is climate change discussions have become captive of a utopian agenda that is using climate change as a stalking horse to drive alarm in the hope that it will convince governments to act.

Madlands Anna Rose, 2012 The co founder of the Australian Youth Climate Coalition recounts her journey around the world with arch climate skeptic Nick Minchin as they challenged each other's views and provoked each other to confront closely held assumptions

The Power of Narrative Raul P. Lejano, Shondel J. Nero, 2020-09-18 There is an ideological war of words waging in America one that speaks to a new fundamentalism rising not just within the American public but across other ideologically torn nations around the globe as well At its heart is climate skepticism an ideological watershed that has become a core belief for millions of people despite a large scientific consensus supporting the science of anthropogenic climate change While many scholars have examined the role of lobbyists and conservative think tanks in fueling the climate skepticism movement there has not yet been a systematic analysis of why the narrative itself has resonated so powerfully with the public Pulling from science and technology studies narrative and discourse theory and public policy *The Power of Narrative* examines the strength of climate skepticism as a story offering a thoughtful analysis and comparison of anti climate science narratives over time and across geographic boundaries This book provides fresh insight into the rhetorical and semantic properties on both sides of the climate change debate that preclude dialogue around climate science and proposes a means for moving beyond ideological entrenchment through language mediation further ethnographic study and research informed teaching *The Power of Narrative* culminates in the revelation of a parallel between narratives about climate skepticism and those in other issue areas e.g. gun rights immigration health crises exposing a genetic meta narrative of public distrust and isolation Ultimately *The Power of Narrative* is not a book about climate change in itself it is instead a book about how our society understands and interacts with science how a social narrative becomes ideology and how we can move beyond personal and political dogma to arrive at a sense of collective rapprochement

A Hole in the Wind David Goodrich, 2017-06-06 An epic bicycle journey across the American hinterland that explores the challenges of climate change alongside a diverse array of American voices After a distinguished career in climate science as the Director of the UN Global Climate Observing System in Geneva David Goodrich returned home to the United States to find a nation and a people in denial Concerned that the American people are willfully deluded by the misinformation about climate that dominates media and politics David thought a little straight talk could set things right As they say in Animal House he decided that this calls for a stupid and futile gesture on someone's part and I'm just the guy to do it Starting on the beach in Delaware David rode his bike 4 200 miles to Oregon talking with the people he met on the ultimate road trip Along the way he learned a great deal about why climate is a complicated issue for many Americans and even more about the country we all share Climate change is the central environmental issue of our time But *A Hole in the Wind* is also about the people Dave met and the experiences he had along the way like the toddler's beauty pageant in

Delaware the tornado in Missouri rust belt towns and their relationship with fracking and the mined out uranium ghost town in Wyoming As he rides David will discuss the climate with audiences varying from laboratories to diners to elementary schools Beautifully simple direct and honest *A Hole in the Wind* is a fresh refreshing ride through a difficult and controversial topic and a rich read that makes you glad to be alive

Climate Charles Eisenstein, 2018-09-18 A stirring case for a wholesale reimagining of the framing tactics and goals we employ in our journey to heal from ecological destruction With research and insight Charles Eisenstein details how the quantification of the natural world leads to a lack of integration and our fight mentality With an entire chapter unpacking the climate change denier s point of view he advocates for expanding our exclusive focus on carbon emissions to see the broader picture beyond our short sighted and incomplete approach The rivers forests and creatures of the natural and material world are sacred and valuable in their own right not simply for carbon credits or preventing the extinction of one species versus another After all when you ask someone why they first became an environmentalist they re likely to point to the river they played in the ocean they visited the wild animals they observed or the trees they climbed when they were a kid This refocusing away from impending catastrophe and our inevitable doom cultivates meaningful emotional and psychological connections and provides real actionable steps to caring for the earth Freeing ourselves from a war mentality and seeing the bigger picture of how everything from prison reform to saving the whales can contribute to our planetary ecological health we resist reflexive postures of solution and blame and reach toward the deep place where commitment lives

Climate Change Scepticism Greg Garrard, Axel Goodbody, George B. Handley, Stephanie Posthumus, 2019-02-07 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com *Climate Change Scepticism* is the first ecocritical study to examine the cultures and rhetoric of climate scepticism in the UK Germany the USA and France Collaboratively written by leading scholars from Europe and North America the book considers climate skeptical texts as literature teasing out differences and challenging stereotypes as a way of overcoming partisan political paralysis on the most important cultural debate of our time

Leaving the Suburbs John Duke, 2021-10-18 In this adventure story the author rides a bicycle back home nearly 3 300 miles in order to witness firsthand how the landscape slowly changes across the vast and diverse North American continent It took two weeks to navigate across one continental watershed that had been entirely covered by a mile thick ice sheet a mere 20 000 years ago One massive glacier had lain right there on the path with if you were paying attention the telltale signs of the earthen scars the piles of rock left behind and the erratic boulder here and there It then took 7 000 years for Earth s temperature to slowly rise 9 degrees while that ice sheet retreated to the North Pole And it took us less than a generation to raise it another 2 degrees from the burning of mined fossil lightning speed compared to geological time This first person narrative briefly paints the climate story along the way the past present and future with over 60 references from scientific journals news reports interviews films videos university data and governmental

agencies It attempts to answer two of the most important questions of our time What does the path forward look like and who will lead us out of the most daunting environmental challenge humanity has ever faced Be surprised and enjoy the ride

The Skeptical Environmentalist Bjørn Lomborg,2001 The Skeptical Environmentalist challenges widely held beliefs that the environmental situation is getting worse and worse The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems The Skeptical Environmentalist offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media

Environmentalism Gone Mad Alan Carlin,2015-04-28 Dr Alan Carlin is an economist and physical scientist with degrees from Caltech and MIT and publications in both economics and climate energy who became actively involved in the environmental movement in the 1960s This led to an almost 39 year career as a manager and senior analyst at the U S Environmental Protection Agency In the mid 2000s he began researching the claims by the environmental movement and the UN that the release of carbon dioxide by modern civilization will lead to catastrophic global warming This book is an account of his personal journey of discovery In Environmentalism Gone Mad Dr Carlin documents the dysfunction of the modern environmental movement demonstrating the need of a major course correction to steer it back to reality

Protecting the Planet Budd Titlow,Mariah Tinger,2016 An inspirational story of pioneering environmentalists who heightened awareness regarding nature s value and heroes of today who are working to secure a sustainable future

Inside the World of Climate Change Skeptics Kristin Haltinner,Dilshani Sarathchandra,2023-03-21 As wildfires rip across the western United States and sea levels rise along coastal cities from Louisiana to Alaska some people nevertheless reject the mainstream scientific consensus on anthropogenic climate change What leads people to doubt or outright denial What leads skeptics to change their minds Drawing from a rich collection of interviews and surveys with self identified climate change skeptics and some former ones sociologists Kristin Haltinner and Dilshani Sarathchandra delve into the underlying dynamics of climate skepticism in the United States In probing how ideas about science religion politics and media affect perceptions of climate change they find a far greater diversity of attitudes and beliefs than one might expect including some pro environmental views With this nuanced understanding of climate change skepticism Inside the World of Climate Change Skeptics offers much needed insights on improving communication in ways that can move us toward a better future while advancing environmental policies with widespread political support

Walking to the Sun Tom Haines,2018-10-02 On a winter day in 2013 Tom Haines stood in front of his basement furnace and wondered about the source of the natural gas that fueled his insulated life During the next four years Haines an award winning journalist and experienced wanderer walked hundreds of miles through landscapes of fuel oil gas and coal and water wind and sun on a crucial exploration of how we live on Earth in the face of a growing climate crisis Can we get from the fossil fuels of today to the renewables of tomorrow The story Haines tells in Walking to the Sun is full not only of human encounters with roustabouts working on an oil rig farmers tilling fields beneath wind turbines and many others but also of the meditative range that arrives with solitude far from home Walking to the Sun overcomes the dislocation of our industrial times to look closely at the world around us and to consider what might come next
