Language Acquisition By Deaf Children:

Language Acquisition by Deaf Children Kristina Coltzau, 2011-11 Seminar paper from the year 2011 in the subject English Language and Literature Studies Other grade 1 7 Ernst Moritz Arndt University of Greifswald Anglistik Amerikanistik language English abstract Language is the most important device in means of communication between human beings all over the world We use it to ask something to complain or explain and to tell what we think about things that come into our mind But what if everything around you is silent If you are deaf You need to take advantage of one of your other organs the eyes Take advantage of facial expressions and gesticulation performed by others In this term paper we have a look on language acquisition by deaf children in comparison with the acquisition by hearing children First of all I will give information about deafness in general followed by an introduction to sign language I will concentrate on American Sign Language ASL because of the small amount of information available about the other kinds of sign language Within the comparison we need to differentiate between children growing up with hearing or deaf parents because of the impact the social environment has on language acquisition This is also relevant to state because only 10% of the deaf children actually have deaf parents Further I would like to introduce bilingualism in connection with deafness In my conclusion I will state why studies on the subject of language acquisition by deaf children are important to understand language in his whole complexity

Language Acquisition in Deaf Children Britta Wirth, 2006-04-14 Seminar paper from the year 2005 in the subject English Language and Literature Studies Linguistics grade 1 7 Ruhr University of Bochum English Department course Child Language Acquisition language English abstract Language acquisition has been studied for a long time but it is not completely understood yet Charles Darwin may have been the first to examine the development of a first language and he assumed that humans have an instinct to learn language Later on this idea was replaced by the notion that the acquisition of language is a sociocultural phenomenon In the early 1960s the linguist Chomsky presented a new explanation he said that children learn a language in the same way for example as they learn to walk upright because it is part of their nature and not because it is a form of their culture Thus language acquisition has a natural course of development 1If this theory is absolutely right or not is still being argued but shall not be the prior topic of this paper This work shall examine what happens if children are hearing impaired Are they able to follow the usual process of language acquisition or not In order to assess the consequences of language acquisition affected by physical disability one has to consider a general process of language development first There are various factors which have an influence on a child s process of language acquisition How large the impact of a specific factor is varies from theory to theory Nevertheless linguists agree that the grammatical structure the possible innate language acquisition mechanisms or biases as well as the biological or cognitive maturational factors and the nature of the language input to the child and the social context in which it takes place influence a child s language development No matter which factor has the most impressive impact on a child s speech progress by the age of

four years he or she usually has a good command of the basic vocabulary syntax and phonology This language proficiency is found in all healthy children all over the world

Sign language acquisition of deaf children

Deborah Heinen, 2014-07-03 Seminar paper from the year 2012 in the subject American Studies Linguistics grade 2 3 University of Bonn language English abstract Giving a first impression of how the system of sign language works this term paper starts off with the formal and grammatical structure of American Sign Language Subsequently a comparison with the structure of British Sign Language gives insights into similarities and differences between those two sign languages In its main part the term paper focuses on the acquisition of sign language in the deaf child The development of speech is presented chronologically and compared to the linguistic development of hearing children The vocabulary of hearing and deaf children is compared and different scientific opinions on the issue are being discussed The last chapter tries to answer the central questions of this term paper How does the acquisition of sign language differ from language acquisition of hearing children Are deaf children therefore handicapped And if yes to what extent

Language Acquisition By Eye

Charlene Chamberlain, Jill P. Morford, Rachel I. Mayberry, 1999-08-01 This book focuses on the early acquisition of signed languages and the later development of reading by children who use signed languages It represents the first collection of research papers focused solely on the acquisition of various signed languages by very young children all of whom are acquiring signed languages natively from deaf parents It is also the first collection to investigate the possible relationships between the acquisition of signed language and reading development in school aged children The underlying questions addressed by the chapters are how visual gestural languages develop and whether and how visual languages can serve the foundation for learning a second visual representation of language namely reading Language Acquisition by Eye is divided into two parts anchored in the toddler phase and the school pupil phase The central focus of Part I is on the earliest stages of signed language acquisition The chapters in this part address important questions as to what babytalk looks like in signed language and the effect it has on babies attention what early babbling looks like in signed language what babies earliest signs look like how parents talk to their babies in signed language to ensure that their babies see what s being said and what the earliest sentences in signed languages tell us about the acquisition of grammar With contrasting research paradigms these chapters all show the degree to which parents and babies are highly sensitive to one another s communicative interactions in subtle and complex ways Such observations cannot be made for spoken language acquisition because speech does not require that the parent and child look at each other during communication whereas signed language does Part II focuses on the relationship between signed language acquisition and reading development in children who are deaf All of these chapters report original research that investigates and uncovers a positive relationship between the acquisition and knowledge of signed language and the development of reading skills and as a result represents a historical first in reading research This section discusses how current theory applies to the case of deaf children s reading and presents new data that illuminates

reading theory Using a variety of research paradigms each chapter finds a positive rather than a negative correlation between signed language knowledge and usage and the development of reading skill These chapters are sure to provide the foundation for new directions in reading research *Advances in the Sign Language Development of Deaf Children* Brenda Schick, Marc Marschark, Patricia Elizabeth Spencer, 2005-09-02 The use of sign language has a long history Indeed humans first languages may have been expressed through sign Sign languages have been found around the world even in communities without access to formal education In addition to serving as a primary means of communication for Deaf communities sign languages have become one of hearing students most popular choices for second language study Sign languages are now accepted as complex and complete languages that are the linguistic equals of spoken languages Sign language research is a relatively young field having begun fewer than 50 years ago Since then interest in the field has blossomed and research has become much more rigorous as demand for empirically verifiable results have increased In the same way that cross linguistic research has led to a better understanding of how language affects development cross modal research has led to a better understanding of how language is acquired It has also provided valuable evidence on the cognitive and social development of both deaf and hearing children excellent theoretical insights into how the human brain acquires and structures sign and spoken languages and important information on how to promote the development of deaf children This volume brings together the leading scholars on the acquisition and development of sign languages to present the latest theory and research on these topics They address theoretical as well as applied questions and provide cogent summaries of what is known about early gestural development interactive processes adapted to visual communication linguistic structures modality effects and semantic syntactic and pragmatic development in sign Along with its companion volume *Advances in the Spoken Language Development of Deaf and Hard of Hearing Children* this book will provide a deep and broad picture about what is known about deaf children s language development in a variety of situations and contexts From this base of information progress in research and its application will accelerate and barriers to deaf children s full participation in the world around them will continue to be overcome *Language Learning Practices with Deaf Children* Patricia L. McAnally, Susan Rose, Stephen Patrick Quigley, 1994 *Advances in the Sign Language Development of Deaf Children* Brenda Schick, Marc Marschark, Patricia Elizabeth Spencer, 2005-09-02 The authors provide cogent summaries of what is known about early gestural development interactive processes adapted to visual communication the processes of semantic syntactic pragmatic development in sign *Sign Language Acquisition by Deaf and Hearing Children* Deborah Chen Pichler, Marlon Kuntze, Diane Lillo-Martin, Marianne Rossi Stumpf, Ronice Müller de Quadros, 2016-09-15 This digital textbook offers an accessible introduction to first second and bilingual language acquisition focusing on sign languages as the primary frame of reference Signed entirely in American Sign Language with accompanying slides and an optional English voice over this digital text provides an innovative approach to conveying the visual moving elements intrinsic to sign

language maintaining accessibility to both ASL dominant and English dominant readers Unlike most texts that rely on spoken language examples to illustrate the process of language development Sign Language Acquisition by Deaf and Hearing Children draws from a rich body of sign language research to guide the user through the major developmental milestones for language acquisition The textbook examines universal properties of first language acquisition the wide variation in language input experienced by deaf children and the impact of such variation on language development Sign language development in other contexts focusing on late exposed signers child and adult bilingual signers hearing L2 signers and atypical signers with cognitive disorders or Specific Language Impairments is addressed as well Critical terms and concepts are highlighted on slides that accompany each video chapter indicating their inclusion in a 200 item bilingual glossary which is accessible from any point in the video text Conveniently packaged on a USB flash drive the text also includes printable PDF versions of the chapter slides and a complete reference list Sign Language Acquisition by Deaf and Hearing Children is an excellent resource for language acquisition courses and early intervention training as well as for parents of deaf and hearing signing children A Brazilian edition of the text in Libras with spoken Brazilian Portuguese voice over will be available from Editora da Universidade Federal de Santa Catarina

The Resilience of Language Susan Goldin-Meadow, 2005-04-05 Imagine a child who has never seen or heard any language at all Would such a child be able to invent a language on her own Despite what one might guess the children described in this book make it clear that the answer to this question is yes The children are congenitally deaf and cannot learn the spoken language that surrounds them In addition they have not yet been exposed to sign language either by their hearing parents or their oral schools Nevertheless the children use their hands to communicate they gesture and those gestures take on many of the forms and functions of language The properties of language that we find in the deaf children's gestures are just those properties that do not need to be handed down from generation to generation but can be reinvented by a child de novo the resilient properties of language This book suggests that all children deaf or hearing come to language learning ready to develop precisely these language properties In this way studies of gesture creation in deaf children can show us the way that children themselves have a large hand in shaping how language is learned

From Gesture to Language in Hearing and Deaf Children Virginia Volterra, 1994 In 21 essays on communicative gesturing in the first two years of life this vital collection demonstrates the importance of gesture in a child's transition to a linguistic system Introductions preceding each section emphasize the parallels between the findings in these studies and the general body of scholarship devoted to the process of spoken language acquisition Renowned scholars contributing to this volume include Ursula Bellugi Judy Snitzer Reilly Susan Goldwin Meadow Andrew Lock M Chiara Levorato and many others

Language Development in Exceptional Circumstances Dorothy Bishop, Dorothy V. M. Bishop, Kay Mogford-Bevan, 1993 This book covers a range of exceptional circumstances and is written in a jargon free style including a glossary of linguistic and medical terminology This text is suitable for both students and practitioners in the fields of

psycholinguistics *Language and Deafness* Peter V. Paul, 2009 The Fourth Edition of *Language and Deafness* covers language and literacy development from preschool through adolescence Content includes the basics of language development and the relationship between language and cognition Oral communication methods and English like signing systems are also covered along with linguistics sociolinguistics of American Sign Language Multicultural aspects including bilingualism and second language learning are covered in detail **A Family-Centered Signed Language Curriculum to Support Deaf Children's Language Acquisition** Razi M. Zarchy, Leah C. Geer, 2023-08-24 Deaf children experience language deprivation at alarmingly high rates One contributing factor is that most are born to non signing hearing parents who face insurmountable barriers to learning a signed language This Element presents a case for developing signed language curricula for hearing families with deaf children that are family centered and focus on child directed language Core vocabulary functional sentences and facilitative language techniques centered around common daily routines allow families to apply what they learn immediately Additionally Deaf Community Cultural Wealth DCCW lessons build families capacity to navigate the new terrain of raising a deaf child If early intervention programs serving the families of young deaf children incorporate this type of curriculum into their service delivery survey data suggest that it is both effective and approachable for this target population so the rates of language deprivation may decline **Language Acquisition** Jill G. De Villiers, Peter A. De Villiers, 1978 The study of language acquisition has become a center of scientific inquiry into the nature of the human mind The result is a windfall of new information about language about learning and about children themselves In *Language Acquisition* Jill and Peter de Villiers provide a lively introduction to this fast growing field Their book deals centrally with the way the child acquires the sounds meanings and syntax of his language and the way he learns to use his language to communicate with others In discussing these issues the de Villiers provide a clear and insightful treatment of the classic questions about language acquisition Does the child show a genetic predisposition for speech or grammar or semantics which makes him uniquely able to learn human language What kinds of learning are involved in acquiring language and what kinds of experience with a language are necessary to support such learning Is there a critical period during the child's development which is optimal for language acquisition And what kind of psychological disabilities underlie the failure to acquire language *Sign Language Acquisition* Anne Baker, Bencie Woll, 2008 How children acquire a sign language and the stages of sign language development are extremely important topics in sign linguistics and deaf education with studies in this field enabling assessment of an individual child's communicative skills in comparison to others In order to do research in this area it is important to use the right methodological tools The contributions to this volume address issues covering the basics of doing sign acquisition research the use of assessment tools problems of transcription analyzing narratives and carrying out interaction studies It serves as an ideal reference source for any researcher or student of sign languages who is planning to do such work This volume was originally published as a Special Issue of *Sign Language*

Linguistics 8 1 2 2005 *Advances in the Spoken-Language Development of Deaf and Hard-of-Hearing Children* Patricia Elizabeth Spencer, Marc Marschark, 2005-09-01 Throughout history there have been efforts to help deaf children develop spoken language through which they could have full access to the hearing world These efforts although pursued seriously and with great care frequently proved fruitless and often only resulted in passionate arguments over the efficacy of particular approaches Although some deaf children did develop spoken language there was little evidence to suggest that this development had been facilitated by any particular education approach and moreover many even most deaf children especially those with profound loss never develop spoken language at all Recent technological advances however have led to more positive expectations for deaf children s acquisition of spoken language Innovative testing procedures for hearing allow for early identification of loss that leads to intervention services during the first weeks and months of life Programmable hearing aids allow more children to make use of residual hearing abilities Children with the most profound losses are able to reap greater benefits from cochlear implant technologies At the same time there have been great advances in research into the processes of deaf children s language development and the outcomes they experience As a result we are for the first time accruing a sufficient base of evidence and information to allow reliable predictions about children s progress that will in turn lead to further advances The contributors to this volume are recognized leaders in this research and here they present the latest information on both the new world evolving for deaf and hard of hearing children and the improved expectations for their acquisition of spoken language Chapters cover topics such as the significance of early vocalizations the uses and potential of technological advances and the cognitive processes related to spoken language The contributors provide objective information from children in a variety of programming using signs using speech only using cued speech and cutting edge information on the language development of children using cochlear implants and the innovations in service provision Along with its companion volume *Advances in Sign Language Development of Deaf Children* this book will provide a deep and broad picture of what is known about deaf children s language development in a variety of situations and contexts From this base of information progress in research and its application will accelerate and barriers to deaf children s full participation in the world around them will continue to be overcome
