Is the Language Faculty Non Linguistic? Umberto Ansaldi, N. J. Enfield,2016-08-15 A line of research in cognitive science over several decades has been dedicated to finding an innate language specific cognitive system a faculty which allows human infants to acquire languages natively without formal instruction and within short periods of time In recent years this search has attracted significant controversy in cognitive science generally and in the language sciences specifically Some maintain that the search has had meaningful results though there are different views as to what the findings are ranging from the view that there is a rich and rather specific set of principles to the idea that the contents of the language faculty are while specifiable in fact extremely minimal But other researchers rigorously oppose the continuation of this search arguing that decades of effort have turned up nothing The fact remains that the proposal of a language specific

faculty was made for a good reason namely as an attempt to solve the vexing puzzle of language in our species Much work has been developing to address this and specifically to look for ways to characterize the language faculty as an emergent phenomenon i e not as a dedicated language specific system but as the emergent outcome of a set of uniquely human but not specifically linguistic factors in combination A number of theoretical and empirical approaches are being developed in order to account for the great puzzles of language language processing language usage language acquisition the nature of grammar and language change and diversification This research topic aims at reviewing and exploring these recent developments and establishing bridges between these young frameworks as well as with the traditions that have come before The goal of this Research Topic is to focus on current developments in what many regard as a paradigm shift in the language sciences In this Research Topic we want to ask If current explicit proposals for an innate dedicated faculty for language are not supported by data or arguments how can we solve the problems that UG was proposed to solve Is it possible to solve the puzzles of language in our species with an appeal to causes that are not specifically linguistic Approaches to Language: Data, Theory, and Explanation Ángel J. Gallego, Aritz Irurtzun, 2020-12-24 The study of language has changed substantially in the last decades In particular the development of new technologies has allowed the emergence of new experimental techniques which complement more traditional approaches to data in linguistics like informal reports of native speakers judgments surveys corpus studies or fieldwork This move is an enriching feature of contemporary linguistics allowing for a better understanding of a phenomenon as complex as natural language where all sorts of factors internal and external to the individual interact Chomsky 2005 This has generated some sort of divergence not only in research approaches but also in the phenomena studied with an increasing specialization between subfields and accounts At the same time it has also led to subfield isolation and methodological a priori with some researchers even claiming that theoretical linguistics has little to offer to cognitive science see for instance Edelman Phillips den Dikken Bernstein Tortora Sprouse Sch tze Phillips 2013

by a key example from the recent literature The volume is divided into three parts Part I showcases the many ways in which humans can shed light on the evolution of language when placed in specific experimental settings as well as discussing the use of clinical genetic observational and historical data Part II is devoted to simulations and models that enable the careful control of biases mechanisms and environments while Part III revolves around the idea that the study of non human animals can provide valuable insights into the evolution of human language The handbook as a whole demonstrates that multiple complimentary approaches are necessary to do justice to the complexity of language evolution

Formal Linguistics and Language Education Andreas Trotzke,Tanja Kupisch,2020-06-10 This volume focuses on work that has its origin and motivation in formal linguistics and theory driven research on the acquisition of grammar and on this basis tries to establish links to language pedagogy including students and teachers beliefs about what grammar actually is The contributions to this volume cover a wide range of empirical linguistic domains and concern aspects of morphosyntax including word order inflectional morphology article systems pronouns compounding patterns as well as orthography and students general beliefs about grammar There are very few volumes which include work for language education by researchers in formal linguistics This volume does just that looking at grammar both in terms of the teaching of grammar in general and with treatment of specific areas of grammar As such it is a welcome contribution to our understanding of language education and the role of grammar in language teaching Melinda Whong The Hong Kong University of Science and Technology Hong Kong

Functional Approaches to Language Shannon Bischoff,Carmen Jany,2013-10-29 Functionalism as characterized by Allen 2007 254 holds that linguistic structures can only be understood and explained with reference to the semantic and communicative functions of language whose primary function is to be a vehicle for social interaction among human beings Since the 1970s inspired by the work of Jespersen Bolinger Dik Halliday and Chafe functionalism has been attached to a variety of movements and models making major contributions to linguistic theory and to various subfields within linguistics such as syntax discourse language acquisition cognitive linguistics typology and documentary linguistics Further functional approaches have had a major impact outside linguistics in fields such as psychology and education both in terms of theory and application The main goal of functionalist approaches is to clarify the dynamic relationship between form and function Thompson 2003 53 Functionalist perspectives have gained more ground over the past decades with more linguists resorting to functional explanations to account for linguistic structure The authors in this volume present the current state of functional approaches to linguistic inquiry expanding our knowledge of language and linguistics

Cognitive Aphasiology - A Usage-Based Approach to

Language in Aphasia Rachel Hatchard, 2021-10-15 Aphasia is the most common acquired language disorder in adults resulting from brain damage usually stroke This book firstly explains how aphasia research and clinical practice remain heavily influenced by rule based generative theory and summarizes key shortcomings with this approach Crucially it demonstrates how an alternative the constructivist usage based approach can provide a more plausible theoretical perspective for characterizing language in aphasia After detailing rigorous transcription and segmentation methods it presents constructivist usage based analyses of spontaneous speech from people with various aphasia types challenging a clear cut distinction between lexis and grammar emphasizing the need to consider whole form storage and frequency effects beyond single words and indicating that individuals fall along a continuum of spoken language capability rather than differing categorically by aphasia type It provides original insight into aphasia with wide reaching implications for clinical practice while equally highlighting how the study of aphasia is important for the development of Cognitive Linguistics

Language as an Ecological Phenomenon Sune Vork Steffensen, Stephen Cowley, Martin Döring, 2024-05-30 Moving beyond a more traditional view of language as a discrete sociocultural and cognitive entity that distorts our understanding of surrounding ecologies this book argues that the starting point for ecolinguistics is an appreciation of language as not just about nature but of nature Exploring this conceptual change in the field the book presents a process view in which language is substituted by languaging emphasising the bioecologies that we cohabit with numerous other species It puts forward this perspective by looking at the theoretical considerations behind the understanding of languaging as bioecological and through examining languaging in various contexts and places Drawing on examples from across the world it addresses topics such as climate catastrophes corporate narratives questions of ecological leadership the bioecological implications of the COVID pandemic and relational landscapes It also makes use of data from across multiple bioecological settings including the dairy and agricultural industries
