   Luigi Moretti Roberto Podda,2024-08-01 Luigi Moretti Lessons of SPAZIO focuses on the theoretical work of the Italian architect Luigi Moretti Rome 1906 1973 It does so selectively focusing on the editorials he published between 1950 and 1953 as editor in chief of the magazine SPAZIO as well as a further essay on parametric architecture published in 1971 1972 in the first issue of the magazine MOEBIUS directed by his friend Giulio Roisecco This book rediscovers Moretti s personal impact

on international architectural theory through thoughtful comments that shed light on the architect s modernity and original approach Although Moretti is an architect renowned for his projects and buildings his theoretical essays are less well known The aim of this book is therefore to explore Moretti s theoretical work which covers many topics including pictorial art sculpture architecture urban planning music cinema poetry mathematics computer science parametricity In addition to the translation from Italian to English the book contains reproductions of the original articles accompanied by a series of essays of critical commentary and updated interpretations that show new ways of approaching reading and understanding the foundations of current architectural theory and its progress over the last 50 years This book approaches Moretti s thought from a new perspective with the aim of reconsidering the originality of this brilliant and visionary architect who was intellectually ostracised for many years due to political and ideological contingencies even though he personified the ideal of the Renaissance man in modern times A re reading of Moretti s work is more justified today than has ever been before both to reconnect the threads with contemporaneity and to make his intensity and farsightedness of vision known to researchers teachers and students working in the areas of architecture and design theory technology and art today **Historic Zuni Architecture and Society** Thomas John Ferguson,1996-03 A unique approach to the Zuni Pueblo s history applying the architectural method of space syntax linking the structure of Zuni society to the structure of the architecture housing it Drawing heavily on archeological findings the volume nonetheless disputes the traditional archeological theory of population change as a basis for the changes in Zuni society but does not offer any clear theories of its own However Ferguson adjunct curator of archeology Arizona State U does create a vivid historical architectural analysis of the Zuni culture society and social and architectural structure from 1540 to the 1980s Includes numerous diagrams illustrations and photographs

Shape Grammar and Space Syntax Approach in Contextual Design Neeta Lambe,2024-02-06 The book is an attempt to present a logical approach to contextual design With a lot of buzz around sustainability architects analyze contexts in detail to propose sustainable designs Hence the contextual design approach is gaining importance in architectural practice Architects and designers are always inclined to adopt an intuitive approach to design in historical contexts or surroundings with peculiar characteristics There is no specific methodical approach to design in such contexts apart from the ability to identify cues from the surrounding through experience This book presents a sequential framework wherein one can analyze synthesize and generate design genotypes based on the inbuilt spatial grammar of the context The shape grammar concept as a generative tool is presented to identify the spatial construct s grammar which acts as a cue for design genotypes Space syntax is explored as an analysis tool to evaluate the sympathetic spatial fitness of generated design genotypes The book establishes that the framework is logical in its methodical approach and would generate design genotypes which would help architects and designers have design interventions in in fill development to achieve congruence with the surrounding environment Space and Language in Architectural Education Kasia Nawratek,2022-05-02 Architects habitually disregard

disciplinary boundaries of their profession in search for synergies and inspiration The realm of language although not considered to be architects natural environment opens opportunities to further stretch and expand the architectural imagination and the set of tools used in the design process When used in the context of architectural pedagogy the exploration of the relationship between space and language opens the discussion further to include the reflection on the design studio structure the learning process in creative subjects and the ethical dimension of architectural education This book offers a glimpse into architectural pedagogies exploring the relationship between space and language using literary methods and linguistic experiments The examples discuss a wide range of approaches from international perspective exploring opportunities and challenges of engaging literary methods and linguistic experiments in architectural education The theme of Catalysts discusses the use of literary methods in architectural pedagogy where literary texts are used to jumpstart and support the design process resulting in deeply contextual approaches capable of subverting embedded hierarchies of the design studio Tensions explore the gap between the world and its description employing linguistic experiments and literary methods to enrich and expand the architectural vocabulary to include the experience of space in its infinite complexity This book will be useful for innovators in architectural education and those seeking to expand their teaching practice to incorporate literary methods and to creatives interested in making teaching a part of their practice It may also appeal to students from design based disciplines with an established design studio culture demonstrating how to use narrative poetry and literature to expand and feed your imagination   *Prompt Engineering for Generative AI* James Phoenix,Mike Taylor,2024-05-16 Large language models LLMs and diffusion models such as ChatGPT and Stable Diffusion have unprecedented potential Because they have been trained on all the public text and images on the internet they can make useful contributions to a wide variety of tasks And with the barrier to entry greatly reduced today practically any developer can harness LLMs and diffusion models to tackle problems previously unsuitable for automation With this book you ll gain a solid foundation in generative AI including how to apply these models in practice When first integrating LLMs and diffusion models into their workflows most developers struggle to coax reliable enough results from them to use in automated systems Authors James Phoenix and Mike Taylor show you how a set of principles called prompt engineering can enable you to work effectively with AI Learn how to empower AI to work for you This book explains The structure of the interaction chain of your program s AI model and the fine grained steps in between How AI model requests arise from transforming the application problem into a document completion problem in the model training domain The influence of LLM and diffusion model architecture and how to best interact with it How these principles apply in practice in the domains of natural language processing text and image generation and code   *The Generative AI Practitioner's Guide* Arup Das,David Sweenor,2024-07-20 Generative AI is revolutionizing the way organizations leverage technology to gain a competitive edge However as more companies experiment with and adopt AI systems it becomes challenging for data and analytics

or social formations Architecture and Spatial Culture argues that architecture matters because it makes the settings of our life intelligible so that we can sustain or creatively transform them As technological and social innovations allow us to overcome spatial constraints to communication cooperation and exchange so the architecture of embodied experience reflects independent cultural choices and human values The analysis of a wealth of examples from urban environments to workplaces and museums shows that built space functions pedagogically inducing us to specific ways of seeing understanding and feeling and supporting distinct patterns of cooperation and life in common Architecture and Spatial Culture is about the principles that underpin the design and inhabitation of space It also serves as an introduction to Space Syntax a descriptive theory used to model the human functions of layouts Thus it addresses architects students of architecture and all those working in disciplines that engage the design of the built environment and its social effects

The Semantics of Dynamic Space in French Michel Aurnague,Dejan Stosic,2019-07-29 Research on the semantics of spatial markers in French is known mainly through Vandeloise s 1986 1991 work on static prepositions However interest in the expression of space in French goes back to the mid 1970s and focused first on verbs denoting changes in space whose syntactic properties were related to specific semantic distinctions such as the opposition between movement and displacement This volume provides an overview of recent studies on the semantics of dynamic space in French and addresses important questions about motion expression among which goal bias and asymmetry of motion the status of locative PPs the expression of manner fictive or non actual motion Descriptive experimental and formal or computational analyses are presented providing complementary perspectives on the main issue The volume is intended for researchers and advanced students wishing to learn about both spatial semantics in French and recent debates on the representation of motion events in language and cognition *Image Generation* Hamza Shaikh,2025-09-01 How will AI transform the future of architecture and design Is it a tool triggering creativity or a threat to human artistry As AI image generation reshapes the creative world architects and designers face a critical choice embrace these new applications or risk being left behind By exploring the impact of generative AI on design process this book showcases how these tools can enhance the value of human creativity Can AI help designers push the boundaries of their craft or will it replace and automate the very skills that define us Looking at some of the early experimental workflows it reveals emerging theories and provides step by step practical guidance from leaders in the field You ll discover how AI can be used meaningfully in design workflows and gain unique inspiration to develop your own approach to harnessing the hybrid creative powers of generative AI For architects designers and students alike this is a roadmap to understanding and leveraging the power of AI Will you embrace this evolution and stay ahead of the curve **Human Factors in Architecture, Sustainable Urban Planning and Infrastructure** Alicja Maciejko,2022-07-24 Human Factors in Architecture Sustainable Urban Planning and Infrastructure Proceedings of the 13th International Conference on Applied Human Factors and Ergonomics AHFE 2022 July 24 28 2022 New York USA **Masted**

Butler,Francisco Gonzálvez-García,2014-08-28 This book intended primarily for researchers and advanced students expands greatly on previous work by the authors exploring the topography of the multidimensional functional cognitive space within which functional cognitive and or constructionist approaches to language can be located The analysis covers a broad range of 16 such approaches with some additional references to Chomskyan minimalism and is based on 58 questionnaire items each rated by 29 experts on particular models for their importance in the model concerned These ratings are analysed statistically to reveal overall patterns of dis similarity across models The questionnaire ratings and experts comments are then used together with the authors close reading of the literature in detailed discussion leading to a final dichotomous rating for each feature in each model the results again being analysed statistically The final chapter presents the overall conclusions and suggests how existing collaborations between approaches could be strengthened and new ones created in future research Exploring Functional Cognitive Space has been awarded the 2016 prize of the Spanish Association for Applied Linguistics Asociaci n Espa ola de Ling stica Aplicada AESLA for work by experienced researchers   **Lessons for Students in Architecture** Herman Hertzberger,2005 Gives a broad insight into Hertzberger s library and a stimulating impression of one of the most important Dutch architects alive today Rather than supplying the reader with design recipes Hertzberger has provided an essential source of inspiration to everyone involved with the design process
