Language Gesture Space Karen Emmorey:

The Meaning of Space in Sign Language Gemma Barberà Altimira, 2015-07-01 Bringing together sign language linguistics and the semantics pragmatics interface this book focuses on the use of signing space in Catalan Sign Language LSC On the basis of small scale corpus data it provides an exhaustive description of referential devices dependent on space The book provides insight into the study of meaning in the visual spatial modality and into our understanding of the discourse behavior of spatial locations

The Oxford Handbook of Cognitive Linguistics Dirk Geeraerts, Herbert Cuyckens, 2010-06-09 With 49 chapters written by experts in the field this reference volume authoritatively covers cognitive linguistics from basic concepts and models to practical applications

Simultaneity in Signed Languages Myriam Vermeerbergen, Lorraine Leeson, Onno Alex Crasborn, 2007-01-01 Signed language users can draw on a range of articulators when expressing linguistic messages including the hands torso eye gaze and mouth Sometimes these articulators work in tandem to produce one lexical item while in other instances they operate to convey different types of information simultaneously Over the past fifteen years there has been a growing interest in the issue of simultaneity in signed languages However this book is the first to offer a comprehensive treatment of this topic presenting a collection of papers dealing with different aspects of simultaneity in a range of related and unrelated signed languages in descriptive and cross linguistic treatments which are set in different theoretical frameworks This volume has relevance for those interested in sign linguistics in teaching and learning signed languages and is also highly recommended to anyone interested in the fundamental underpinnings of human language and the effects of signed versus spoken modality

Quotatives Isabelle Buchstaller, Ingrid van Alphen, 2012 Research on quotation has yielded a rich and diverse knowledge base Scientific interest has been sparked particularly by the recent emergence of new quotative forms in typologically related and unrelated languages i e English be like Hebrew kaz Japanese mitai na The present collection gives a platform to research conducted within different linguistic sub disciplines and on the basis of a variety of Western and non Western languages The introduction presents an overview of forms and functions of old and new quotative constructions The nine chapters investigate quotation from different perspectives from conversation analysis over grammaticalization and language variation and change to typological and formal approaches The collection advocates a comprehensive approach to the phenomenon quotation seeking a more nuanced knowledge base as regards the linguistic properties social uses and pragmatic functions than monolingual or single disciplinary approaches deliver The cross disciplinary nature and the wealth of data make the findings broadly available and relevant

Reference in Discourse A. A. Kibrik, 2011-09 This is the first full study of how people refer to entities in natural discourse It contributes to the understanding of both linguistic diversity and the cognitive underpinnings of language and it provides a framework for further research in both fields Andrej Kibrik focuses on the way specific entities are mentioned in natural discourse during which about every third word usually depends on referential

choice He considers reference as an overt representation of underlying cognitive processes and combines a theoretically oriented cognitive approach with empirically based cross linguistic analysis He begins by introducing the cognitive approach to discourse analysis and by examining the relationship between discourse studies and linguistic typology He discusses reference as a linguistic phenomenon in connection with the traditional notions of deixis anaphora givenness and topicality and describes the way his theoretical approach is centered on notions of referent activation in working memory He argues that the speaker is responsible for the shape of discourse and that referential expressions should be understood as choices made by speakers rather than as puzzles to be solved by addressees Kibrik examines the cross linguistic aspects of reference and the typology of referential devices including referring expressions per se such as free and bound pronouns and referential aids that help to tell apart the concurrently activated entities This discussion is based on the data from about 200 languages from around the world He then proposes a comprehensive model of referential choice in which he draws on concepts from cognitive linguistics psycholinguistics cognitive psychology and cognitive neuroscience and applies this to Russian and English He also draws together his empirical analyses in order to examine what light his analysis of discourse can shed on the way information is processed in working memory In the final part of the book Andrej Kibrik offers a wider perspective including deixis referential aspects of gesticulation and signed languages This pioneering work will interest linguists and cognitive scientists interested in discourse reference typology and the operations of working memory in linguistic communication

Viewpoint in Language Barbara Dancygier,Eve Sweetser,2012-04-12 What makes us talk about viewpoint and perspective in linguistic analyses and in literary texts as well as in landscape art Is this shared vocabulary marking real connections between the disparate phenomena This volume argues that human cognition is not only rooted in the human body but also inherently viewpointed as a result consequently so are language and communication Dancygier and Sweetser bring together researchers who do not typically meet on common ground analysts of narrative and literary style linguists examining the uses of grammatical forms in signed and spoken languages and analysts of gesture accompanying speech Using models developed within cognitive linguistics the book uncovers surprising functional similarities across various communicative forms arguing for specific cognitive underpinnings of such correlations What emerges is a new understanding of the role and structure of viewpoint and a groundbreaking methodology for investigating communicative choices across various modalities and discourse contexts

Exploring Discourse Strategies in Social and Cognitive Interaction Manuela Romano,Maria Dolores Porto,2016-03-31 This volume offers readers interested in Discourse Analysis and or Socio Cognitive models of language a closer view of the relationship between discourse cognition and society by disclosing how the cognitive mechanisms of discourse processing depend on shared knowledge and situated cognition An inter and multidisciplinary approach is proposed that combines theories and methodologies coming from Conceptual Metaphor Theory Multimodal Metaphor Theory Critical Discourse Analysis Narratology Systemic Functional Linguistics

Appraisal Theory together with the most recent developments of Socio Cognitive Linguistics for the analysis of real communicative events which range from TV reality shows commercials digital stories or political debates to technical texts architectural memorials newspapers and autobiographical narratives Still several key notions are recurrent in all contributions embodiment multimodality conceptual integration metaphor and creativity as the fundamental constituents of discourse processing It is only through this wide ranging epistemological and empirical approach that the complexity of discourse strategies in real contexts i e human communication can be fully comprehended and that discourse analysis and cognitive linguistics can be brought closer together

Pragmatics of Space Andreas H. Jucker, Heiko Hausendorf, 2022-09-20 This handbook provides a comprehensive overview of spatial configurations of language use and of language use in space It consists of four parts The first part covers the various practices of describing space through language including spatial references in spoken interaction or in written texts the description of motion events as well as the creation of imaginative spaces in storytelling The second part surveys aspects of the spatial organization of face to face communication including not only spatial arrangements of small groups in interaction but also the spatial dimension of sign language and gestures The third part is devoted to the communicative resources of constructed spaces and the ways in which these facilitate and shape communication Part four finally is devoted to pragmatics across space and cultures i e the ways in which language use differs across language varieties languages and cultures

Modality and Structure in Signed and Spoken Languages Texas Linguistics Society. Conference, 2002-10-24 Publisher Description

Morphosyntactic Expression in Functional Grammar Casper de Groot, Kees Hengeveld, 2012-05-02 Morphological and syntactic issues have received relatively little attention in Functional Grammar due to the fact that this grammatical model given its functional orientation was primarily concerned with developing its pragmatic and semantic components Now that these have been solidly developed this book turns to the further development of the syntactic and morphological components of the model Two recent developments receive pride of place Bakker's Dynamic Expression Model and Hengeveld and Mackenzie's Functional Discourse Grammar The first model aims at accounting for the complex interactions that one finds in many languages between the sets of expression rules that have to account for form on the one hand and those that establish order on the other The second model takes a further step by considering morphosyntactic and phonological representations to be part of the underlying structure of the grammar rather than as the output of that grammar contrary to the original assumptions in FG The book accordingly contains synopses of these two proposals as well as applications of these to a variety of linguistic phenomena Further articles

provide detailed analyses of a range of semantic and pragmatic categories and their morphosyntactic expression in a wide variety of languages The articles in this book contain data on some 60 different languages including focused articles on phenomena in Arabic Danish English Lengua de Se as Espa ola Mapudungun Plains Cree and Tanggu In all the contributions to this volume show that the issue of morphosyntactic expression in Functional Grammar is very much alive and moving into promising new directions while at the same time contributing to a better understanding of a large number of morphosyntactic phenomena in a wide variety of languages

Sign Language Research, Uses and Practices Laurence Meurant,Aurélie Sinte,Mieke Van Herreweghe,Myriam Vermeerbergen,2013-06-26 The uses and practices of sign languages are strongly related to scientific research on sign languages and vice versa Conversely sign linguistics cannot be separated from Deaf community practices including practices in education and interpretation Therefore the current volume brings together work on sign language interpreting the use of spoken and sign language with deaf children with cochlear implants and early language development in children exposed to both a spoken and sign language and reports on recent research on aspects of sign language structure It also includes papers addressing methodological issues in sign language research The book presents papers by more seasoned researchers and new kids on the block as well as papers in which the two collaborate The contributions will be of interest to all those interested in linguistics sociolinguistics cultural studies interpreting and education It will have particular relevance to those interested in sign linguistics sociolinguistics of deaf communities Deaf studies Deaf culture sign language interpretation sign language teaching and spoken signed bilingualism Given the scarcity of literature on Deaf studies the book will also appeal widely beyond the traditional academic milieu As a result it has relevance for those teaching and learning sign languages for professional and student interpreters and for teachers of the deaf

Word-Formation Peter O. Müller,Ingeborg Ohnheiser,Susan Olsen,Franz Rainer,2015-09-14 This handbook comprises an in depth presentation of the state of the art in word formation The five volumes contain 207 articles written by leading international scholars The XVI chapters of the handbook provide the reader in both general articles and individual studies with a wide variety of perspectives word formation as a linguistic discipline history of science theoretical concepts units and processes in word formation rules and restrictions semantics and pragmatics foreign word formation language planning and purism historical word formation word formation in language acquisition and aphasia word formation and language use tools in word formation research The final chapter comprises 74 portraits of word formation in the individual languages of Europe and offers an innovative perspective These portraits afford the first overview of this kind and will prove useful for future typological research This handbook will provide an essential reference for both advanced students and researchers in word formation and related fields within linguistics

Morphological Complexity within and across Boundaries Aslı Güner,Dilek Uygun-Gökmen,Balkız Öztürk,2020-07-15 This volume brings together a collection of original articles investigating state of the art themes in morphology The papers in the volume provide an in depth analysis for spoken

and sign languages within morphological word domain morphosyntax and morphophonology Bringing data from a variety of languages including Turkish some understudied ones e g Turkish Sign Language Late Ottoman Turkish and also endangered languages e g Karachay Balkar Sauzini Cappadocian Aivaliot and Phrasiot Greek the volume will be of special interest to a wide audience ranging from typologists to theoretical linguists and graduate students in linguistics and is expected to generate further research on the above mentioned languages as well as to contribute to the cross linguistic literature on the themes explored in the volume *A Matter of Complexity* Roland Pfau, Markus Steinbach, Annika Herrmann, 2016-03-07

Since natural languages exist in two different modalities the visual gestural modality of sign languages and the auditory oral modality of spoken languages it is obvious that all fields of research in modern linguistics will benefit from research on sign languages Although previous studies have provided important insights into a wide range of phenomena of sign languages there are still many aspects of sign languages that have not yet been investigated thoroughly The structure of subordinated clauses is a case in point The study of these complex syntactic structures in the visual gestural modality adds to our understanding of linguistic variation in the domain of subordination Moreover it offers new empirical and theoretical evidence concerning possible structures and functions of subordination in natural languages And last but not least it answers the question to what extent the corresponding morphosyntactic and prosodic strategies depend on the modality of articulation and perception This volume represents the first collection of papers by leading experts in the field investigating topics that go beyond the analysis of simple clauses It thus contributes in innovative ways to recent debates about syntax prosody semantics discourse structure and information structure and their complex interrelation *The Handbook of Historical Linguistics, Volume II* Richard D. Janda, Brian D. Joseph, Barbara S. Vance, 2020-09-15

An entirely new follow up volume providing a detailed account of numerous additional issues methods and results that characterize current work in historical linguistics This brand new second volume of *The Handbook of Historical Linguistics* is a complement to the well established first volume first published in 2003 It includes extended content allowing uniquely comprehensive coverage of the study of language s over time Though it adds fresh perspectives on several topics previously treated in the first volume this Handbook focuses on extensions of diachronic linguistics beyond those key issues This Handbook provides readers with studies of language change whose perspectives range from comparisons of large open vs small closed corpora via creolistics and linguistic contact in general to obsolescence and endangerment of languages Written by leading scholars in their respective fields new chapters are offered on matters such as the origin of language evidence from language for reconstructing human prehistory invocations of language present in studies of language past benefits of linguistic fieldwork for historical investigation ways in which not only biological evolution but also field biology can serve as heuristics for research into the rise and spread of linguistic innovations and more Moreover it offers novel and broadened content complementing the earlier volume so as to provide the fullest available overview of a wholly engrossing field includes 23 all

new contributed chapters treating some familiar themes from fresh perspectives but mostly covering entirely new topics features expanded discussion of material from language families other than Indo European provides a multiplicity of views from numerous specialists in linguistic diachrony The Handbook of Historical Linguistics Volume II is an ideal book for undergraduate and graduate students in linguistics researchers and professional linguists as well as all those interested in the history of particular languages and the history of language more generally

Signs and Structures Paweł Rutkowski, 2015-09-15 As sign language linguistics has become an important and prodigious field of research in the last few decades it comes as no surprise that the repertoire of methodological approaches to the study of the communication of the Deaf has also expanded considerably While earlier work on sign languages was often focused on providing arguments for them being full fledged linguistic systems current debates do no longer center on whether visual spatial grammars are worth being researched but on how this type of research should be conducted This book contains a selection of papers that could be thought of as a good representative sample of current trends in formal approaches to the study of sign language syntax It illustrates how generative research on the communication of the Deaf may contribute to our understanding of the syntax of natural languages in general and indicates to what extent it is possible to integrate advances in the analysis of visual spatial grammar with current spoken language research Originally published in Sign Language Linguistics 16 2 2013

Viewpoint and the Fabric of Meaning Barbara Dancygier, Wei-lun Lu, Arie Verhagen, 2016-03-21 This volume explores the cross linguistic diversity and possibly inconsistency of the span of linguistic means that signal reported speech and thought The integration of broad linguistic viewpoint in conversation and narrative and cognitive theory of mind and understanding the inner life and thought of others strategies for handling mixed points of view will be considered
