Large Carnivores And The Conservation Of Biodiversity:

Large Carnivores and the Conservation of Biodiversity Justina Ray, Kent H. Redford, Robert Steneck, Joel Berger, 2013-04-09 Large Carnivores and the Conservation of Biodiversity brings together more than thirty leading scientists and conservation practitioners to consider a key question in environmental conservation Is the conservation of large carnivores in ecosystems that evolved with their presence equivalent to the conservation of biological diversity within those systems Building their discussions from empirical long term data sets contributors including James A Estes David S Maehr Tim McClanahan Andr s J Novaro John Terborgh and Rosie Woodroffe explore a variety of issues surrounding the link between predation and biodiversity What is the evidence for or against the link Is it stronger in marine systems What are the implications for conservation strategies Large Carnivores and the Conservation of Biodiversity is the first detailed broad scale examination of the empirical evidence regarding the role of large carnivores in biodiversity conservation in both marine and terrestrial ecosystems It contributes to a much more precise and global understanding of when where and whether protecting and restoring top predators will directly contribute to the conservation of biodiversity Everyone concerned with ecology biodiversity or large carnivores will find this volume a unique and thought provoking analysis and synthesis

Large Carnivore Conservation and Management Tasos Hovardas, 2018-07-11 Large carnivores include iconic species such as bears wolves and big cats Their habitats are increasingly being shared with humans and there is a growing number of examples of human carnivore coexistence as well as conflict Next to population dynamics of large carnivores there are considerable attitude shifts towards these species worldwide with multiple implications This book argues and demonstrates why human dimensions of relationships to large carnivores are crucial for their successful conservation and management It provides an overview of theoretical and methodological perspectives heterogeneity in stakeholder perceptions and behaviour as well as developments in decision making stakeholder involvement policy and governance informed by human dimensions of large carnivore conservation and management The scope is international with detailed examples and case studies from Europe North and South America Central and South Asia as well as debates of the challenges faced by urbanization agricultural expansion national parks and protected areas The main species covered include bears wolves lynx and leopards The book provides a novel perspective for advanced students researchers and professionals in ecology and conservation wildlife management human wildlife interactions environmental education and environmental social science Coexisting with Large Carnivores Tim Clark, Murray Rutherford, Denise Casey, 2013-04-10 As in the rest of the United States grizzly bears wolves and mountain lions in and around Yellowstone National Park were eliminated or reduced decades ago to very low numbers In recent years however populations have begun to recover leading to encounters between animals and people and more significantly to conflicts among people about what to do with these often controversial neighbors Coexisting with Large Carnivores presents a close up look at the socio political context of large carnivores and their management in western

Wyoming south of Yellowstone National Park including the southern part of what is commonly recognized as the Greater Yellowstone Ecosystem The book brings together researchers and others who have studied and worked in the region to help untangle some of the highly charged issues associated with large carnivores their interactions with humans and the politics that arise from those interactions This volume argues that coexistence will be achieved only by a thorough understanding of the human populations involved their values attitudes beliefs and the institutions through which carnivores and humans are managed Coexisting with Large Carnivores offers important insights into this complex dynamic issue and provides a unique overview of issues and strategies for managers researchers government officials ranchers and everyone else concerned about the management and conservation of large carnivores and the people who live nearby **Large Carnivore Conservation**

Cherney, Christina Milloy, 2020-03-04 Strategies for protecting wolves mountain lions and more by taking the human species into account as well Very valuable Journal of Wildlife Management Drawing on six case studies of wolf grizzly bear and mountain lion conservation in habitats stretching from the Yukon to Arizona Large Carnivore Conservation argues that conserving and coexisting with large carnivores is as much a problem of people and governance of reconciling diverse and sometimes conflicting values perspectives and organizations and of effective decision making in the public sphere as it is a problem of animal ecology and behavior By adopting an integrative approach editors Susan G Clark and Murray B Rutherford seek to examine and understand the interrelated development of conservation science law and policy as well as how these forces play out in courts other public institutions and the field In combining real world examples with discussions of conservation and policy theory Large Carnivore Conservation not only explains how traditional management approaches have failed to meet the needs of all parties but also highlights examples of innovative successful strategies and provides practical recommendations for improving future conservation efforts Building on decades of work this book integrates biological knowledge with human dimensions study and charts a course for coexistence with large carnivores Douglas W Smith Senior Wildlife Biologist Yellowstone National Park **Conservation and Management of Large Carnivores - Local Insights for Global Challenges**

Tasos Hovardas, Stephen Redpath, José Vicente López-Bao, Vincenzo Penteriani, Arie Trouwborst, 2021-06-29 **Sustainable Development Research at Universities in the United Kingdom**

Walter Leal Filho, 2016-12-28 This book gathers inputs from a variety of researchers in the field of sustainable development in the widest sense across the UK from business and economics to arts and fashion administration environment and media studies The book also describes research curriculum innovation and campus greening in a comprehensive way Many universities in the United Kingdom are currently engaged in high quality research on matters related to sustainable development Yet there are relatively few publications that provide a multidisciplinary overview of these

efforts and projects and in which researchers from across the spectrum of the natural and social sciences have the opportunity to present their research methods the results of their empirical research or exchange ideas about on going and future research initiatives focusing on sustainable development Addressing this important gap in the literature this book contributes to the further development of this rapidly growing field in the United Kingdom and beyond

Ecology of Predation and Scavenging and the Interface Marcos Moleón, 2021-07-01 Predation and scavenging are pervasive ecological interactions in both terrestrial and aquatic environments The ecology evolution and conservation of predators and scavengers have received wide scientific attention and public awareness However the close connection that exists between predation and scavenging has not been emphasized until very recently The recognition that carnivorous animals may obtain meat by either hunting prey or scavenging their carcasses has profound implications from individual behavior to population community and ecosystem levels However many relevant questions still remain unexplored This book deals with some of these questions with the final aim to definitively dismiss the traditional view that predation and scavenging are disconnected ecological processes This compendium of science may help to inspire ecologists evolutionary biologists paleontologists anthropologists epidemiologists forensic scientists anatomists and of course conservation biologists in their stimulating and promising endeavor of achieving a more comprehensive understanding of carnivory in a rapidly changing world

Action Plan for the Conservation of the Iberian Lynx in Europe (Lynx Pardinus) Miguel Delibes, Alejandro Rodríguez, Pablo Ferreras, Council of Europe, 2000-01-01 The action plan for the conservation of the Iberian lynx *Lynx pardinus* in Europe was prepared for the Large Carnivore Initiative in Europe a voluntary organisation supported by the World Wide Fund for Nature The plan was discussed and endorsed in the framework of the Council of Europe's Wildlife Convention Bern Convention It contains valuable information on the status of the species and useful recommendations and guidelines for its conservation and management

Recovery of Gray Wolves in the Great Lakes Region of the United States Adrian P. Wydeven, Timothy R. van Deelen, Edward Heske, 2009-02-27 In this book we document and evaluate the recovery of gray wolves *Canis lupus* in the Great Lakes region of the United States The Great Lakes region is unique in that it was the only portion of the lower 48 states where wolves were never completely extirpated This region also contains the area where many of the first modern concepts of wolf conservation and research were developed Early proponents of wolf conservation such as Aldo Leopold Sigurd Olson and Durward Allen lived and worked in the region The longest ongoing research on wolf prey relations see Vucetich and Peterson Chap 3 and the first use of radio telemetry for studying wolves see Mech Chap 2 occurred in the Great Lakes region The Great Lakes region is the first place in the United States where Endangered wolf populations recovered All three states Minnesota Wisconsin and Michigan developed ecologically and socially sound wolf conservation plans and the federal government delisted the population of wolves in these states from the United States list of endangered and threatened species on March 12 2007 see Refsnider Chap 21 Wolf management reverted to the individual states at that time

Although this delisting has since been challenged we believe that biological recovery of wolves has occurred and anticipate the delisting will be restored This will be the first case of wolf conservation reverting from the federal government to the state conservation agencies in the United States

Opportunities and Challenges for Environmental Sustainability: A Socioeconomic and Political Analysis Fritz Dufour, 2019-05-26 This report is a socioeconomic and political analysis of environmental sustainability in terms of the present state of the environment what we can do to reverse the negative trends and what the current and potential barriers are First it offers a background of the issue through a historical perspective How we got here has a lot to do with how previous generations behaved towards the environment Similarly how we behave will determine the kind of environment future generations will have to contend with It looks at the dynamics likely to impact the balance of nature Also because understanding what is biodiversity and why is it important are essential in order to grasp the concept of sustainability this report looks at the types of ecosystems that form the biosphere and brings an answer to this important question Is the Maximum sustainable yield MSY concept a fallacy Moreover the importance of cities is a key factor in environmental sustainability So the report shows the pros and cons of cities in both the preservation of the environment and the conservation of its biodiversity The social economic and political analyses use the latest data and views from experts scientists and scholars alike and also the views of the common people The result is that all three levels have positives and negatives and so none of them should be individually prioritized over the other two To tackle this dilemma the report offers an alternative an inclusive pluralistic and global approach which aims at motivating all stakeholders from rich and poor countries and people from all walks of life to work together towards a common goal and common interests Such an approach says the report should be bottom up instead of top down that is the needs of local populations especially those closer to biodiversity must come first before those of large corporations However while in the present and short terms this approach may be successful in the long term or a distant future there are reasons to be skeptical for the environment is constantly changing and generations are different from one another And that is very important because what constitutes the cornerstone of environmental sustainability is this the present use of natural resources should not be harmful to future generations Therefore the report looks into the future While acknowledging that in terms of environmental sustainability predicting the future is a daunting task because it is better to think that the future is now the report shows how we can prepare a soft landing for our great grand children by laying the groundwork for them We can accomplish this last task because we still have time

Yellowstone Cougars Toni K. Ruth, Polly C. Buotte, Maurice G. Hornocker, 2019-09-23 **Yellowstone Cougars** examines the effect of wolf restoration on the cougar population in Yellowstone National Park one of the largest national parks in the American West No other study has ever specifically addressed the theoretical and practical aspects of competition between large carnivores in North America The authors provide a thorough analysis of cougar ecology how they interact with and are influenced by wolves their main competitor and how this knowledge informs management and conservation of both species across the West Of practical importance **Yellowstone Cougars** addresses the management and conservation of multiple carnivores in increasingly human dominated landscapes The authors move beyond a single species approach to cougar management and conservation to one that considers multiple species which was impossible to untangle before wolf reestablishment in the Yellowstone area provided biologists with this research opportunity **Yellowstone Cougars** provides objective scientific data at the forefront of understanding cougars and large carnivore community structure and

management issues in the Greater Yellowstone Ecosystem as well as in other areas where wolves and cougars are reestablishing. Intended for an audience of scientists, wildlife managers, conservationists, and academics, the book also sets a theoretical precedent for writing about competition between carnivorous mammals.
