Large-Scale Landscape Experiments David Lindenmayer, 2009-03-05 An overview of relationships between landscape change habitat fragmentation and biodiversity conservation using key lessons from the Tumut Fragmentation Study

Large-Scale Landscape Experiments David B. Lindenmayer, 2009-03-05 Landscape change and habitat fragmentation are key factors impacting biodiversity worldwide These processes have many facets each of which is usually studied in isolation The Tumut Fragmentation Study has run for over 11 years and yielded extensive data on changes in both plant and animal populations in areas of native forest and pine plantation The study is unique in the way that many different factors and processes influencing a wide range of species groups have been studied in the one large scale natural experiment Writing for academic researchers professionals and graduate students David Lindenmayer uses the study and other relevant research to provide an overview of the relationships between landscape change habitat fragmentation and biodiversity conservation Key lessons are drawn on throughout the book on the design and implementation of large scale ecological studies biodiversity conservation in fragmented landscapes and the management of plantation landscapes for enhanced nature conservation

Zoo Conservation Biology John E. Fa, Stephan M. Funk, Donnamarie O'Connell, 2011-08-18 In the face of ever declining biodiversity zoos have a major role to play in species conservation Written by professionals involved in in situ conservation and restoration projects internationally this is a critical assessment of the contribution of zoos to species conservation through evidence amassed from a wide range of sources The first part outlines the biodiversity context within which zoos should operate introducing the origins and global spread of zoos and exploring animal collection composition The second part focuses on the basic elements of keeping viable captive animal populations It considers the consequences of captivity on animals the genetics of captive populations and the performance of zoos in captive breeding The final part examines ways in which zoos can make a significant difference to conservation now and in the future Bridging the gap between pure science and applied conservation this is an ideal resource for both conservation biologists and zoo professionals **Why Conserve**

Nature? Stephen Trudgill, 2022-02-24 How we view nature transforms the world around us People rehearse stories about nature which make sense to them If we ask the question why conserve nature and the answers are based on myths then are these good myths to have Scientific knowledge about the environment is fundamental to ideas about how nature works It is essential to the conservation endeavour However any conservation motivation is nested within a society's meanings of nature and the way society values it Given the therapeutic and psychological significance of nature for us and our culture this book considers the meanings derived from the poetic and emotional attachment to a sense of place which is arguably just as important as scientific evidence The functional significance of species is important but so too is the therapeutic value of

nature together with the historic and spiritual meanings entwined in a human feeling for landscape and wildlife **Hunting Wildlife in the Tropics and Subtropics** Julia E. Fa, Stephan M. Funk, Robert Nasi, 2022-09 Provides a comprehensive review of all topics related to the use and overuse of wildlife for their meat **Landslide Ecology** Lawrence R. Walker, Aaron B. Shiels, 2013 Landslides are dangerous fascinating phenomena understanding their biological and ecological aspects is essential for achieving slope stability and habitat restoration *Conservation Translocations* Martin J. Gaywood, John G. Ewen, Peter M. Hollingsworth, Axel Moehrenschrager, 2022-12-22 Conservation translocation the movement of species for conservation benefit includes reintroducing species into the wild reinforcing dwindling populations helping species shift ranges in the face of environmental change and moving species to enhance ecosystem function Conservation translocation can lead to clear conservation benefits and can excite and engage a broad spectrum of people However these projects are often complex and involve careful consideration and planning of biological and socio economic issues This volume draws on the latest research and experience of specialists from around the world to help provide guidance on best practice and to promote thinking over how conservation translocations can continue to be developed The key concepts cover project planning biological and social factors influencing the efficacy of translocations and how to deal with complex decision making This book aims to inspire inform and help practitioners maximise their chances of success and minimise the risks of failure History of Landscape Ecology in the United States Gary W. Barrett, Terry L. Barrett, Jianguo Wu, 2015-06-23 This book describes the emergence of landscape ecology its current status as a new integrative science and how distinguished scholars in the field of landscape ecology view the future regarding new challenges and career opportunities Over the past thirty years landscape ecology has utilized development in technology and methodology e g satellites GIS and systems technologists to monitor large temporal spatial scale events and phenomena These events include changes in vegetative cover and composition due to both natural disturbance and human cause changes that have academic economic political and social manifestations There is little doubt due to the temporal spatial scale of this integrative science that scholars in fields of study ranging from anthropology to urban ecology will desire to compare their fields with landscape ecology during this intellectually and technologically fertile time History of Landscape Ecology in the United States brings to light the vital role that landscape ecologists will play in the future as the human population continues to increase and fragment the natural environment Landscape ecology is known as a synthesized intersection of disciplines but new theories concepts and principles have emerged that form the foundation of a new transdiscipline *Plant Conservation Science and Practice* Stephen Blackmore, Sara Oldfield, 2017-08-03 This book focuses on global efforts to protect plant diversity and the role that botanic gardens play in conserving plant species Soil Fauna Assemblages Uffe N. Nielsen, 2019-03-28 A holistic overview of soil fauna their contributions to ecosystem function and implications of global change belowground **Habitat Suitability and Distribution Models** Antoine Guisan, Wilfried Thuiller, Niklaus E. Zimmermann, 2017-09-14 This book

introduces the key stages of niche based habitat suitability model building evaluation and prediction required for understanding and predicting future patterns of species and biodiversity Beginning with the main theory behind ecological niches and species distributions the book proceeds through all major steps of model building from conceptualization and model training to model evaluation and spatio temporal predictions Extensive examples using R support graduate students and researchers in quantifying ecological niches and predicting species distributions with their own data and help to address key environmental and conservation problems Reflecting this highly active field of research the book incorporates the latest developments from informatics and statistics as well as using data from remote sources such as satellite imagery A website at www.unil.ch/hsdm contains the codes and supporting material required to run the examples and teach courses

Natural Resource Management Reimagined Robert G. Woodmansee, John C. Moore, Dennis S. Ojima, Laurie Richards, 2021-03-11 The Systems Ecology Paradigm SEP incorporates humans as integral parts of ecosystems and emphasizes issues that have significant societal relevance such as grazing land forestland and agricultural ecosystem management biodiversity and global change impacts Accomplishing this societally relevant research requires cutting edge basic and applied research This book focuses on environmental and natural resource challenges confronting local to global societies for which the SEP methodology must be utilized for resolution Key elements of SEP are a holistic perspective of ecological social systems systems thinking and the ecosystem approach applied to real world complex environmental and natural resource problems The SEP and ecosystem approaches force scientific emphasis to be placed on collaborations with social scientists and behavioral learning and marketing professionals The SEP has given environmental scientists decision makers citizen stakeholders and land and water managers a powerful set of tools to analyse integrate knowledge and propose adoption of solutions to important local to global problems

Invading Ecological Networks Cang Hui, David Richardson, 2022-01-13 Until now biological invasions have been conceptualised and studied mainly as a linear process from introduction to establishment to spread This volume charts a new course for the field drawing on key developments in network ecology and complexity science It defines an agenda for Invasion Science 2.0 by providing new framings and classification of research topics and by offering tentative solutions to vexing problems In particular it conceptualises a transformative ecosystem as an open adaptive network with critical transitions and turnover with resident species heuristically learning and fine tuning their niches and roles in a multiplayer eco evolutionary game It erects signposts pertaining to network interactions structures stability dynamics scaling and invasibility It is not a recipe book or a road map but an atlas of possibilities a hitchhiker's guide

Comparative Plant Succession Among Terrestrial Biomes of the

World Karel Prach, Lawrence R. Walker, 2020-05-14 Provides a comparative approach to plant succession among all terrestrial biomes and disturbances helping to reveal generalizable patterns

The Species-Area Relationship Thomas J. Matthews, Kostas A. Triantis, Robert J. Whittaker, 2021-03-18 Provides a comprehensive synthesis of a fundamental

phenomenon the species area relationship addressing theory evidence and application **Joint Species Distribution Modelling** Otso Ovaskainen, Nerea Abrego, 2020-06-11 A comprehensive account of joint species distribution modelling covering statistical analyses in light of modern community ecology theory **Conserving Africa's Mega-Diversity in the Anthropocene** Joris P. G. M. Cromsigt, Sally Archibald, Norman Owen-Smith, 2017-03-02 This book synthesises key insights from a century of ecological research and monitoring efforts in one of Africa's oldest protected areas **Ecosystem Collapse and Recovery** Adrian C. Newton, 2021-04-22 There is a growing concern that many important ecosystems such as coral reefs and tropical rain forests might be at risk of sudden collapse as a result of human disturbance At the same time efforts to support the recovery of degraded ecosystems are increasing through approaches such as ecological restoration and rewilding Given the dependence of human livelihoods on the multiple benefits provided by ecosystems there is an urgent need to understand the situations under which ecosystem collapse can occur and how ecosystem recovery can best be supported To help develop this understanding this volume provides the first scientific account of the ecological mechanisms associated with the collapse of ecosystems and their subsequent recovery After providing an overview of relevant theory the text evaluates these ideas in the light of available empirical evidence by profiling case studies drawn from both contemporary and prehistoric ecosystems Implications for conservation policy and practice are then examined Curious About Nature Tim Burt, D. B. A. Thompson, Des Thompson, 2020-02-20 Proclaims the enjoyment of teaching studying and learning outdoors via the inspirational stories of some remarkable people
