## **Laser Induced Damage Of Optical Materials Series In Optics And Optoelectronics:**

*Laser Damage in Optical Materials*, Roger M. Wood, 1986 Emphasizes a morphological and phenomenological approach to the study of laser induced damage Presents a pictorial record of many of the different phenomena observed as well as a discussion of scaling laws cumulative damage and measurement techniques Helpful appendices provide typical damage thresholds for numerous optical materials over a wide range of wavelengths Useful for optical and laser physicists optical system designers and engineers laser and optical coating manufacturers and students taking courses in optoelectronics lasers and electro optics

**Laser-Induced Damage of Optical Materials** Roger M. Wood, 2003-08-01 The laser power handling capacities of optical systems are determined by the physical properties of their component materials At low intensity levels these factors are not important but an understanding of damage mechanisms is fundamental to good design of laser products operating at high power *Laser Induced Damage of Optical Materials* presents a comprehensive overview of the damage processes that occur at high laser intensity levels and explains how these factors limit the energy handling capabilities of optical systems The first two chapters of the book review basic EM theory and consider optical effects including absorption and scattering processes that occur at low and medium energy levels Chapter 3 describes the damage mechanisms that come into effect when intensity levels are raised Chapter 4 discusses the central theory for the definition and measurement of the laser induced damage thresholds of optical materials This covers both thermal damage and dielectric breakdown as a function of absorption and laser pulse length and spot size The following chapters are devoted to surfaces and sub surface damage coatings measurement techniques and special topics such as scaling and the importance of using the correct measurement unit systems *Laser Induced Damage of Optical Materials* is an invaluable resource to those working with optical systems where high laser intensity is a factor
