Lattice Gauge Theory B. Bunk, K.H. Mutter, K. Schilling, 2012-12-06 This volume presents the contributions to the international workshop entitled Lattice Gauge Theory a Challenge in Large Scale Computing that was held in Wuppertal from November 4 to 7 1985 This meeting was the third in a series of European workshops in this rapidly developing field The meeting intended to bring together both active university research ers in this field and scientists from industry and research centers who pursue large scale computing projects on problems within lattice gauge theory These problems are extremely demanding from the point of view of both machine hardware and algorithms for the verification of the continuum fields theories like Quantum Chromodynamics in four dimensional Euclidean space time is quite cumbersome due to the tremendously large number of de grees of freedom Yet the motivation of theoretical physicists to exploit computers as tools for the simulation of complex systems such as gauge field theories has grown considerably during the past years In fact quite a few prominent colleagues of ours have even gone into machine building both in industry and research institutions more parallelism and more de dicated computer architecture are their design goals to help them boost the Megaflop rate in their simulation processes The workshop contained several interesting seminars with status reports on such supercomputer projects like the Italian APE by E Marinari the IBM project GF 11 by D Weingarten and the Danish projects MOSES and PALLAS by H Bohr

Fundamental Problems of Gauge Field Theory G. Velo, A.S. Wightman, 2013-11-11 The sixth Ettore Majorana International School of Mathematical Physics was held at the Centro della Cultura Scientifica Erice Sicily 14 July 1985 The present volume collects lecture notes on the ses sion which was devoted to Fundamental Problems of Gauge Field Theory The School was a NATO Advanced Study Institute sponsored by the Italian Ministry of Public Education the Italian Ministry of Scientific and Technological Research and the Regional Sicilian Government As a result of the experimental and theoretical developments of the last two decades gauge field theory in one form or another now pro vides the standard language for the description of Nature QCD and the standard model of the electroweak interactions illustrate this point It is a basic task of mathematical physics to provide a solid foundation for these developments by putting the theory in a physically transparent and mathematically rigorous form The lectures and seminars of the school concentrated on the many unsolved problems which arise here and on the general ideas and methods which have been proposed for their solution In particular we mention the use of rigorous renormalization group methods to obtain control over the continuum limit of lattice gauge field theories the explora tion of the extraordinary enigmatic connections between Kac Moody Virasoro algebras and string theory and the systematic use of the theory of local algebras and indefinite metric spaces to classify the charged C states in gauge field theories

Science On The Connection Machine - Proceedings Of The First European Cm Users Meeting Th Lippert, Klaus Schilling, Peer Ueberholz, 1992-12-29 The aim of these proceedings is to help disseminate the knowledge about the potential of parallel computing The contents give an overview of various European sites pioneering the

Connection Machine and convey a flavour of the different applications that run efficiently on this parallel architecture

Fundamental Aspects of Quantum Theory Vittorio Gorini, Alberto Frigerio, 2012-12-06 This book collects the contributions to the NATO Advanced Research Workshop on Fundamental Aspects of Quantum Theory held at the Centro di Cultura Scientifica Alessandro Volta Villa Olma Carro Italy 2-7 September 1985. The meeting was dedicated to the memory of the late professor Piero Caldirola, a prominent member of the Physics Department of the University of Milan and a native of Como. The aim of the workshop has been to present several recent experimental results and theoretical developments concerning the various facets of quantum physics. The breadth of scope of the meeting was in accordance with Professor Caldirola's vast scientific interests and fostered communication among experimental physicists, theoretical and mathematical physicists, and mathematicians working in different but related fields. Indeed, lecturers endeavoured to make their contributions understandable to people acquainted with the problem but not necessarily familiar with the technical details, and these efforts were successful as indicated by the frequent private discussions which took place among participants belonging to different breeds and brands. The meeting was made up of six one-day sessions, each of them addressing to a specific aspect of quantum theory: 1. General Problems and Crucial Experiments with emphasis on single particle interference experiments of neutrons and of photons and on the measurement problem; 2. Quantization and Stochastic Processes including stochastic quantization of gauge fields, stochastic description of supersymmetric fields, quantum stochastic calculus and stochastic mechanics. New Vistas in Electro-Nuclear Physics Edward L. Tomusiak, Henry S. Caplan, Edward T. Dressler, 2013-11-11 The NATO Advanced Study Institute New Vistas in Electro-Nuclear Physics was held in Banff, Alberta, Canada, from August 22 to September 4, 1985. This volume contains the lecture notes from that Institute. The idea to organize this Institute coincided with the award of funding for a pulse stretcher ring at the University of Saskatchewan's Linear Accelerator Laboratory. This together with the high level of interest in electron accelerators worldwide convinced us that it was an appropriate time to discuss the physics to be learned with such machines. In particular, that physics which requires high energy and/or high duty cycle accelerators for its extraction was intended to be the focus of the Institute. Thus the scope of the lectures was wide, with topics ranging from the structure of the trinucleons to quark models of nucleons, QCD and QHD. The theme, however, was that we are just trying to understand the nucleus and that the electromagnetic probe can serve as a powerful tool in such a quest. The Geophysics of Sea Ice Norbert Untersteiner, 2013-12-19 Based on the proceedings of the NATO Advanced Study Institute on Air-Sea-Ice Interaction held September 28-October 10, 1981, in Acquafredda di Maremma, Italy. Intent is to present the topic of sea ice in the broad and interdisciplinary context of atmospheric and oceanographic science.

Lattice Gauge Theory '86 Helmut Satz, Isabel Harriety, Jean Potvin, 2012-12-06 This volume contains the Proceedings of the International Workshop Lattice Gauge Theory 1986 held at Brookhaven National Laboratory, September 15-19, 1986. The meeting was the sequel to the one held at

Wuppertal in 1985 the Proceedings of which have appeared in the same Plenum series During the past few years a considerable number of meetings on lattice gauge theory have been held on both sides of the Atlantic With our workshop through early planning and coordination with other prospective organizers we tried to channel this activity into one major yearly meeting For 1986 these efforts were successful and it is our hope that a pattern has been set for the coming years One result however was that the number of participants considerably exceeded that normally found at NATO Advanced Research Workshops This year a nucleus of NATO supported experts induced a large number of further interested specialists to obtain their own funds thus greatly amplifying the impact of the event The topics covered at the workshop ranged from hadron spectra to strong interaction thermodynamics they included spontaneous symmetry breaking and Higgs models renormalization group methods as well as many contributions on various possible schemes for the simulation of dynamical quarks First systematic applications of finite size scaling to lattice gauge theory were discussed and the approach to the continuum limit was considered in detail

Atoms in Unusual Situations Jean P. Briand, 2013-11-11 Atomic Physics is certainly the oldest field in which Quantum Mechanics has been used and has provided the most significant proofs of this new theory Most of the basic concepts except those more recently developed in field quantization have been understood for quite a time Atomic Physics began to serve as a basis for other fields such as molecular solid state or nuclear physics A renewal of interest in Atomic Physics began in the sixties after the discovery of Quantum Electrodynamics and later when it provided some basic tests of fundamental questions like parity violation time reversal or Dirac theory More recently the development of new technologies led to the exploration of very extreme cases in which the most secret aspects of atoms have been observed Rydberg states where the atoms are so big that they can be described by classical theories Heavy or super heavy ions or exotic atoms where unknown QED or relativistic effects can be observed very heavy hydrogenlike or helium like ions positron production in very violent collisions Huge external perturbations as those appearing in super dense plasmas or ultra high fields The aim of this school was to gather atomic physicists from all over the world working in all these areas of Atomic Physics

Defects in Solids A.V. Chadwick, M. Terenzi, 2013-12-01 **Atomic Processes in Electron-Ion and Ion-Ion Collisions** F. Brouillard, 2013-03-09 Four years after a first meeting in BADDECK Canada on the Physics of Ion-Ion and Electron-Ion collisions a second Nato Advanced Study Institute in Halle Lesse Belgium reexamined the subject which had become almost a new one in consideration of the many important developments that had occurred in the mean time The developments have been particularly impressive in two areas the dielectronic recombination of electrons with ions and the collisional processes of multiply charged ions For dielectronic recombination a major event was the obtainment in 1983 of the first experimental data This provided at last a non speculative basis for the study of that intricate and subtle process and strongly stimulated the theoretical activities Multiply charged ions on the other hand have become popular thanks to the development of powerful ion sources This circumstance together with a pressing demand from

thermonuclear research for ionisation and charge exchange cross sections has triggered systematic experimental investigations and new theoretical studies which have contributed to considerably enlarge over the last five years our understanding of the collisional processes of multiply charged ions Dielectronic recombination and multiply charged ions were therefore central points in the programme of the A S I in HAN Lesse and are given a corresponding emphasis in the present book
