Landscape Ecology In Theory And Practice Pattern And Process:

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, 2015-10-29 This work provides in depth analysis of the origins of landscape ecology and its close alignment with the understanding of scale the causes of landscape pattern and the interactions of spatial pattern with a variety of ecological processes The text covers the quantitative approaches that are applied widely in landscape studies with emphasis on their appropriate use and interpretation The field of landscape ecology has grown rapidly during this period its concepts and methods have matured and the published literature has increased exponentially Landscape research has enhanced understanding of the causes and consequences of spatial heterogeneity and how these vary with scale and they have influenced the management of natural and human dominated landscapes Landscape ecology is now considered mainstream and the approaches are widely used in many branches of ecology and are applied not only in terrestrial settings but also in aquatic and marine systems In response to these rapid developments an updated edition of *Landscape Ecology in Theory and Practice* provides a synthetic overview of landscape ecology including its development the methods and techniques that are employed the major questions addressed and the insights that have been gained

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, Robert V. O'Neill, 2003-05-20 An ideal text for students taking a course in landscape ecology The book has been written by very well known practitioners and pioneers in the new field of ecological analysis Landscape ecology has emerged during the past two decades as a new and exciting level of ecological study Environmental problems such as global climate change land use change habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery geographic information systems and desk top computing has permitted the development of spatially explicit analyses In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student Throughout the theoretical developments modeling approaches and results and empirical data are merged together so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes as well as identifying areas where its contributions have been limited Each chapter features questions for discussion as well as recommended reading

Landscape Ecology in Theory and Practice Monica G. Turner, 2004 This text discusses the theoretical developments modelling approaches and results and empirical data of landscape ecology It also emphasizes selected topics in which landscape ecology has made the most contributions to our understanding of ecological processes

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, Robert V. O'Neill, 2007-05-08 An ideal text for students taking a course in landscape ecology The book has been written by very well known practitioners and pioneers in the new field of ecological analysis Landscape ecology has emerged during the past two decades as a new and exciting level of

ecological study Environmental problems such as global climate change land use change habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery geographic information systems and desk top computing has permitted the development of spatially explicit analyses In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student Throughout the theoretical developments modeling approaches and results and empirical data are merged together so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes as well as identifying areas where its contributions have been limited Each chapter features questions for discussion as well as recommended reading

Landscape Genetics Niko Balkenhol, Samuel Cushman, Andrew Storfer, Lisette Waits, 2015-11-09 LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS LANDSCAPE GENETICS CONCEPTS METHODS APPLICATIONS Edited by Niko Balkenhol Samuel A Cushman Andrew T Storfer Lisette P Waits Landscape genetics is an exciting and rapidly growing field melding methods and theory from landscape ecology and population genetics to address some of the most challenging and urgent ecological and evolutionary topics of our time Landscape genetic approaches now enable researchers to study in detail how environmental complexity in space and time affect gene flow genetic drift and local adaptation However learning about the concepts and methods underlying the field remains challenging due to the highly interdisciplinary nature of the field which relies on topics that have traditionally been treated separately in classes and textbooks In this edited volume some of the leading experts in landscape genetics provide the first comprehensive introduction to underlying concepts commonly used methods and current and future applications of landscape genetics Consistent with the interdisciplinary nature of the field the book includes textbook like chapters that synthesize fundamental concepts and methods underlying landscape genetics Part 1 chapters on advanced topics that deserve a more in depth treatment Part 2 and chapters illustrating the use of concepts and methods in empirical applications Part 3 Aimed at beginning landscape geneticists and experienced researchers alike this book will be helpful for all scientists and practitioners interested in learning teaching and applying landscape genetics

Territorial Analysis of Environments Etienne Cossart, Anne Rivière-Honegger, 2024-12-12 Territories are currently faced with a wide range of environmental challenges but suffer from a lack of access to the information and biophysical data that characterizes these challenges Territorial Analysis of Environments sheds light on how the data produced on environmental change needs to be processed completed and disseminated so that local players can take ownership of it The aim is to present methods for developing local regional or even global indicators of the changes underway as well as to understand the logic of the players acting in a given area To this end this book places great emphasis on the notions of systems and the modeling approaches used to formalize them It also presents the data available and the methods for developing an analysis of their spatial

dimension This is based on a wide range of case studies combining environmental data and stakeholder games *Wildlife Management and Landscapes* William F. Porter, Chad J. Parent, Rosemary A. Stewart, David M. Williams, 2021-05-11 This edited collection considers how landscapes designed by humans contain multiple ecosystems for animals and plants Using quantitative methods the contributors explain how to model what components of a landscape are critical to species of interest

Encyclopedia of Theoretical Ecology Alan Hastings, Louis J. Gross, 2012-05-31 A bold and successful attempt to illustrate the theoretical foundations of all of the subdisciplines of ecology including basic and applied and extending through biophysical population community and ecosystem ecology Encyclopedia of Theoretical Ecology is a compendium of clear and concise essays by the intellectual leaders across this vast breadth of knowledge Harold Mooney Stanford University A remarkable and indispensable reference work that also is flexible enough to provide essential readings for a wide variety of courses A masterful collection of authoritative papers that convey the rich and fundamental nature of modern theoretical ecology Simon A. Levin Princeton University Theoretical ecologists exercise their imaginations to make sense of the astounding complexity of both real and possible ecosystems Imagining a real or possible topic left out of the Encyclopedia of Theoretical Ecology has proven just as challenging This comprehensive compendium demonstrates that theoretical ecology has become a mature science and the volume will serve as the foundation for future creativity in this area Fred Adler University of Utah The editors have assembled an outstanding group of contributors who are a great match for their topics Sometimes the author is a key authoritative figure in a field and at other times the author has enough distance to convey all sides of a subject The next time you need to introduce ecology students to a theoretical topic you'll be glad to have this encyclopedia on your bookshelf Stephen Ellner Cornell University Everything you wanted to know about theoretical ecology and much that you didn't know you needed to know but will now Alan Hastings and Louis Gross have done us a great service by bringing together in very accessible form a huge amount of information about a broad complicated and expanding field Daniel Simberloff University of Tennessee Knoxville

A Changing World Felix Kienast, Otto Wildi, Sucharita Ghosh, 2007-03-16 Landscape Research has been established as an interdisciplinary field dealing with complex environmental processes at multiple spatial and temporal scales During the course of its history various societal technological and philosophical stimuli have shaped Landscape Research e.g. the declaration of Landscape Ecology in the 1930s and contemporary global technological and societal developments Modern landscape research presently uses mathematics statistics and advanced simulation techniques to combine empirical observations with known theories from ecology physics geography social science and so on Knowledge is thus updated and quantified via models that are used for estimation hypothesis testing prediction and assessment of scenarios Advances in the computational sciences e.g. fast computers and vast array of software space science e.g. remote sensing and biological sciences e.g. genetics as well as new perspectives in the social sciences play important roles Research

findings are implemented in conservation management urban planning and global change mitigation strategies This book identifies emerging fields and new challenges that are discussed within the framework of the driving forces of Landscape Development Rather than offering a comprehensive overview of all fields of Landscape Research the book addresses hot topics emphasizing major contemporary trends in these fields **Planning at the Landscape Scale** Paul

The SAGE Handbook of

Biogeography Andrew Millington, Mark Blumler, Udo Schickhoff, 2011-09-22 A superb resource for understanding the diversity of the modern discipline of biogeography and its history and future especially within geography departments I expect to refer to it often Professor Sally Horn University of Tennessee As you browse through this fine book you will be struck by the diverse topics that biogeographers investigate and the many research methods they use Biogeography is interdisciplinary and a commonly voiced concern is that one biogeographer may not readily understand another's research findings A handbook like this is important for synthesising situating explaining and evaluating a large literature and pointing the reader to informative publications Geographical Research A valuable contribution in both a research and teaching context If you are biologically trained it provides an extensive look into the geographical tradition of biogeography covering some topics that may be less familiar to those with an evolution ecology background Alternatively if you are a geography student researcher or lecturer it will provide a useful reference and will be invaluable to the non biogeographer who suddenly has the teaching of an introductory biogeography course thrust upon them Adam C Algar Frontiers of Biogeography The SAGE Handbook of Biogeography is a manual for scoping the past present and future of biogeography that enable readers to consider where relevant how similar biogeographical issues are tackled by researchers in different schools In line with the concept of all SAGE Handbooks this is a retrospective and prospective overview of biogeography that will Consider the main areas of biogeography researched by geographers Detail a global perspective by incorporating the work of different schools of biogeographers Explore the divergent evolution of biogeography as a discipline and consider how this diversity can be harnessed Examine the interdisciplinary debates that biogeographers are contributing to within geography and the biological sciences Aimed at an international audience of research students academics researchers and practitioners in biogeography the text will attract interest from environmental scientists ecologists biologists and geographers alike

Landscape Modelling Jiří Anděl, Ivan Bičík, Petr Dostál, Zdeněk Lipský, Siamak G. Shahneshin, 2010-04-11 Landscape modelling integrates the differing perspectives of the many disciplines that deal with the landscape It is motivated not only by the desire for scientific understanding but also by the real time demands of 21st century postindustrial society which include the twin imperatives of stabilizing damaged ecosystems on the one hand and finding effective ways to use the landscape on the other The discipline has the specific goal of designing and assessing future scenarios of landscape development while not losing sight of its past history both ecological and socio cultural This book encompasses the interrelated disciplines of geography landscape ecology and geoinformatics and by drawing on their theories and methodologies introduces the concept of a living landscape with human action an inseparable part of its evolution It offers researchers and decision makers a number of ideas on how our landscape can best be utilized The content reflects the need for sustainable landscape development at the same time as considering long term continuity as a major condition which

enables us to maintain the diversity and multifunctionality of landscapes at regional and macro regional scales Employing advanced terminology and methods this book provides specific results especially for scientists and landscape professionals

Landscape Analysis and Visualisation Christopher Pettit, William Cartwright, Ian Bishop, Kim Lowell, David Pullar, David Duncan, 2008-06-03 Michael Batty Centre for Advanced Spatial Analysis University College London Landscapes like cities cut across disciplines and professions This makes it especially difficult to provide an overall sense of how landscapes should be studied and researched Ecology aesthetics economy and sociology combine with physiognomy and deep physical structure to confuse our understanding and the way we should react to the problems and potentials of landscapes Nowhere are these dilemmas and paradoxes so clearly highlighted as in Australia where landscapes dominate and their relationship to cities is so fragile yet so important to the sustainability of an entire nation if not planet This book presents a unique collection and synthesis of many of these perspectives perhaps it could only be produced in a land urbanised in the tiniest of pockets and yet so daunting with respect to the way non populated landscapes dwarf its cities Many travel to Australia to its cities and never see the landscapes but it is these that give the country its power and imagery It is the landscapes that so impress on us the need to consider how our intervention through activities ranging from resource exploitation and settled agriculture to climate change poses one of the greatest crises facing the modern world In this sense Australia and its landscape provide a mirror through which we can glimpse the extent to which our intervention in the world threatens its very existence **Land Use**

Change Richard J. Aspinall, Michael J. Hill, 2007-12-14 Changes in the use of land reflect a variety of environmental and social factors necessitating an equally varied suite of data to be used for effective analysis While remote sensing both from satellites and air photos provides a central resource for study socio economic surveys censuses and map sources also supply a wealth of valid information **Habitat Fragmentation and Landscape Change** David B. Lindenmayer, Joern

Fischer, 2013-02-22 Habitat loss and degradation that comes as a result of human activity is the single biggest threat to biodiversity in the world today Habitat Fragmentation and Landscape Change is a groundbreaking work that brings together a wealth of information from a wide range of sources to define the ecological problems caused by landscape change and to highlight the relationships among landscape change habitat fragmentation and biodiversity conservation The book synthesizes a large body of information from the scientific literature considers key theoretical principles for examining and predicting effects examines the range of effects that can arise explores ways of mitigating impacts reviews approaches to studying the problem discusses knowledge gaps and future areas for research and management Habitat Fragmentation and Landscape Change offers a unique mix of theoretical and practical information outlining general principles and approaches and illustrating those principles with case studies from around the world It represents a definitive overview and synthesis on the full range of topics that fall under the widely used but often vaguely defined term habitat fragmentation **Forest**

Landscapes and Global Change João C. Azevedo, Ajith H. Perera, M. Alice Pinto, 2014-07-11 Climate change urban sprawl

abandonment of agriculture intensification of forestry and agriculture changes in energy generation and use expansion of infrastructure networks habitat destruction and degradation and other drivers of change occur at increasing rates They affect patterns and processes in forest landscapes and modify ecosystem services derived from those ecosystems Consequently rapidly changing landscapes present many new challenges to scientists and managers While it is not uncommon to encounter the terms global change and landscape together in the ecological literature a global analyses of drivers of change in forest landscapes and their ecological consequences have not been addressed adequately That is the goal of this volume an exploration of the state of knowledge of global changes in forested landscapes with emphasis on causes and effects and challenges faced by researchers and land managers Initial chapters identify and describe major agents of landscape change climate fire and human activities The next series of chapters address implications of changes on ecosystem services biodiversity conservation and carbon flux A chapter that describes methodologies of detecting and monitoring landscape changes is presented followed by chapter that highlights the many challenges forest landscape managers face amidst of global change Finally we present a summary and a synthesis of the main points presented in the book Each chapter will contain the individual research experiences of chapter authors augmented by review and synthesis of global scientific literature on relevant topics as well as critical input from multiple peer reviewers
