Modern Theories of Language Mortéza Mahmoudian, 1993 In a controversial look at the study of linguistics today Mort za Mahmoudian examines twentieth century theories of language in light of empirical evidence In the past linguists have had to choose between a general linguistic theory aimed at universal explanatory power and specific limited linguistic models Arguing that at various levels of linguistic analysis different theories offer more or less explanatory power Mahmoudian makes a persuasive case for an integrated approach incorporating the strengths of both methods The author begins with the identification of principles which despite differences in terminology are held in common by most twentieth century linguists He shows the implications merits and shortcomings of the major schools of linguistic thought as well as the techniques one can use in gathering data Ranging over a wide variety of international linguistic thinking Mahmoudian takes up the question of what he calls experimentation or the extent to which the application of certain linguistic theories have validity in constructing models Simultaneously a survey of the current state of linguistic theory and a case for the necessity of empirical verification in linguistics Modern Theories of Language builds a bridge across the gulf between many long standing conflicts in the theory of language Accessibly written this provocative work predicts future theoretical and epistemological developments and will prove essential reading for students and scholars of linguistics as well as specialists in cognitive psychology and Romance languages

Sign Language Roland Pfau, Markus Steinbach, Bencie Woll, 2012-08-31 Sign language linguists show here that all questions relevant to the linguistic investigation of spoken languages can be asked about sign languages. Conversely, questions that sign language linguists consider even if spoken language researchers have not asked them yet should also be asked of spoken languages. The HSK handbook Sign Language aims to provide a concise and comprehensive overview of the state of the art in sign language linguistics. It includes 44 chapters written by leading researchers in the field that address issues in language typology, sign language grammar, psycholinguistics, neurolinguistics, sociolinguistics, and language documentation and transcription. Crucially, all topics are presented in a way that makes them accessible to linguists who are not familiar with sign language linguistics.

Sociolinguistic Perspectives : Papers on Language in Society, 1959-1994 Charles A. Ferguson, Professor of Linguistics, Stanford University (Emeritus), 1996-01-18 The work of the linguist Charles A. Ferguson spans more than three decades and is remarkable for having been consistently at the forefront of scholarship on the relationship between language and society. This volume collects his most influential and seminal papers, each having expanded the parameters of sociolinguistics and the sociology of language. Taken together, they cover a wide range of topics and issues and more importantly reflect the intellectual progress of a founder of the sociolinguistic field. The volume is divided thematically into four sections and an introduction by Thom Huebner outlines the evolution of Ferguson's ideas and the impact they have had on other scholars. This book is essential reading for everyone interested in the field of sociolinguistics. *Resources in Education*, 1978-12 *Research in Education*, 1968-07

Deconstructing Syntactic Theory Peter W. Culicover, Giuseppe Varaschin, 2025-05-28 Deconstructing Syntactic Theory is a critical examination of the assumptions and methodologies of contemporary derivational syntactic theory. The study ranges from the earliest work inspired by Chomsky's *Syntactic Structures* and *Aspects of the Theory of Syntax* to the present-day Minimalist Program. The book begins with an examination of the relationship between syntactic structure, linear order, and meaning, and the role of uniformity in motivating derivational analysis that assumes movement and invisible structure. A central property of such analyses is that they are cryptoconstructional: construction-specific stipulations are assumed in order to derive the form and meaning of expressions. The second part looks at a range of technical and empirical problems of derivational syntax which require theoretical stipulations and devices to properly constrain cryptoconstructional analyses. The focus is particularly on problems relating to movement and problems of invisibility. In Part III, the authors turn to the question of the independent

justification of syntactic structure arguing that much hierarchical structure is not only unnecessary but also does not yield optimal analyses for a number of grammatical phenomena Part IV focuses on the use of syntax to account for phenomena that are arguably not syntactic it concludes that using syntax to model semantic phenomena is at best not necessary and at worse empirically inadequate Similarly using syntax to model morphological relations works only for a narrow subset of cases and cannot be sustained more generally without causing significant internal problems The book concludes with a review of minimalism laying out aspects of the logic of the Minimalist Program its assumptions and their motivations and consequences The authors argue that minimalism is best achieved by a leaner theory of linguistic representations along the lines of the constructional architecture of Simpler Syntax as proposed by Culicover and Jackendoff 2005 **Objects and Other**

Subjects William D. Davies, Stanley Dubinsky, 2012-12-06 The papers in this volume examine the current role of grammatical functions in transformational syntax in two ways i through largely theoretical considerations of their status and ii through detailed analyses for a wide variety of languages Taken together the chapters in this volume present a comprehensive view of how transformational syntax characterizes the elusive but often useful notions of subject and object examining how subject and object properties are distributed among various functional projections converging sometimes in particular languages
