systems could generate many times the current primary global energy supply This Energy from the Desert volume examines and evaluates the potential of very large scale photovoltaic power generation VLS PV systems Following from the success of the first book on the subject the authors present practical case studies of both virtual and real projects based on selected regions including the Mediterranean the Middle East the Gobi Desert and Western Australia and their specific socio economic dynamics and argue that VLS PV systems in desert areas will be readily available in the near future As the essential companion to the previous International Energy Agency IEA volume it reiterates and develops key concepts introduced by the original study and provides firm practical recommendations to achieve long term targets for policy makers and investors

**Large-Scale Solar Thermal Power** Werner Vogel, Henry Kalb, 2010-03-30 This important contribution to the issue of renewable energy describes the technical and economical requirements of mass produced solar thermal power plants from the different types of power plants to the development needs and a massive development program The authors renowned and experienced experts in the field show that solar thermal power plants because of their simple technology are easy to build with high production rates and therefore can play a substantial role in the rapid substitution of fossil fuels On the basis of solar thermal power using long distance transmission and coal from substituted coal plants a future energy system is described supplying gas and liquid fuels This is the first discussion of a complete concept of a crash strategy for the partial replacement of oil and natural gas

**Taming the Sun** Varun Sivaram, 2019-02-26 How solar could spark a clean energy transition through transformative innovation creative financing revolutionary technologies and flexible energy systems Solar energy once a niche application for a limited market has become the cheapest and fastest growing power source on earth What's more its potential is nearly limitless every hour the sun beams down more energy than the world uses in a year But in Taming the Sun energy expert Varun Sivaram warns that the world is not yet equipped to harness erratic sunshine to meet most of its energy needs And if solar's current surge peters out prospects for replacing fossil fuels and averting catastrophic climate change will dim Innovation can brighten those prospects Sivaram explains drawing on firsthand experience and original research spanning science business and government Financial innovation is already enticing deep pocketed investors to fund solar projects around the world from the sunniest deserts to the poorest villages Technological innovation could replace today's solar panels with coatings as cheap as paint and employ artificial photosynthesis to store intermittent sunshine as convenient fuels And systemic innovation could add flexibility to the world's power grids and other energy systems so they can dependably channel the sun's unreliable energy Unleashing all this innovation will require visionary public policy funding researchers developing next generation solar technologies refashioning energy systems and economic markets and putting together a diverse clean energy portfolio Although solar can't power the planet by itself it can be the centerpiece of a global clean energy revolution A Council on Foreign Relations Book
