Large-Scale Biomedical Science National Research Council, Division on Earth and Life Studies, Institute of Medicine, National Cancer Policy Board, Committee on Large-Scale Science and Cancer Research, 2003-07-19 The nature of biomedical research has been evolving in recent years Technological advances that make it easier to study the vast complexity of biological systems have led to the initiation of projects with a larger scale and scope In many cases these large scale analyses may be the most efficient and effective way to extract functional information from complex biological systems Large Scale Biomedical Science Exploring Strategies for Research looks at the role of these new large scale projects in the biomedical sciences Though written by the National Academies Cancer Policy Board this book addresses implications of large scale science extending far beyond cancer research It also identifies obstacles to the implementation of these projects and makes recommendations to improve the process The ultimate goal of biomedical research is to advance knowledge and provide useful innovations to society Determining the best and most efficient method for accomplishing that goal however is a continuing and evolving challenge The recommendations presented in Large Scale Biomedical Science are intended to facilitate a more open inclusive and accountable approach to large scale biomedical research which in turn will maximize progress in understanding and controlling human disease *Journal of the National Cancer Institute*, 2003 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews and commentary on timely topics *Setting Priorities for Large Research Facility Projects Supported by the National Science Foundation* National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, Committee on Setting Priorities for NSF-Sponsored Large Research Facility Projects, 2004-07-15 In 1995 the National Science Foundation NSF created a special account to fund large several tens of millions of dollars research facilities Over the years these facilities have come to represent an increasingly prominent part of the nation's R D portfolio Recently concern has intensified about the way NSF is selecting projects for this account In 2003 six U S Senators including the chair and ranking member of the Senate Subcommittee on VA HUD and Independent Agencies Appropriations expressed these concerns in a letter to the NRC asking it to review the current prioritization process and report to us on how it can be improved This report presents a series of recommendations on how NSF can improve its priority setting process for large research facilities While noting that NSF has improved this process the report states that further strengthening is needed if NSF is to meet future demands for such projects [Managing biomedical research to prevent and cure disease in the 21st century](#) United States. institutions account for about 9 percent of the National Institutes of Health budget Centers are popular because they can bring visibility focus and increased resources to bear on specific diseases However congressional debate in 2001 over proposed legislation directing NIH to set up centers for muscular dystrophy research highlighted several areas of uncertainty about how to decide when centers are an appropriate research mechanism in specific cases The debate also highlighted a growing trend among patient advocacy groups to regard centers as a key element of every disease research program regardless of how much is known about the disease in question the availability of experienced researchers and other factors This book examines the criteria and procedures used in deciding whether to establish new specialized research centers It discusses the future role of centers in light of the growing trend of large scale research in biomedicine and it offers recommendations for improving the classification and tracking of center programs clarifying and improving the decision process and criteria for initiating center programs resolving the occasional disagreements over the appropriateness of centers and evaluating the performance of center programs more regularly and systematically
