Large-Scale Landscape Experiments David Lindenmayer,2009-03-05 An overview of relationships between landscape change habitat fragmentation and biodiversity conservation using key lessons from the Tumut Fragmentation Study

Large-Scale Landscape Experiments David B. Lindenmayer,2009-03-05 Landscape change and habitat fragmentation are key factors impacting biodiversity worldwide These processes have many facets each of which is usually studied in isolation The Tumut Fragmentation Study has run for over 11 years and yielded extensive data on changes in both plant and animal populations in areas of native forest and pine plantation The study is unique in the way that many different factors and processes influencing a wide range of species groups have been studied in the one large scale natural experiment Writing for academic researchers professionals and graduate students David Lindenmayer uses the study and other relevant research to provide an overview of the relationships between landscape change habitat fragmentation and biodiversity conservation Key lessons are drawn on throughout the book on the design and implementation of large scale ecological studies biodiversity conservation in fragmented landscapes and the management of plantation landscapes for enhanced nature conservation

Zoo Conservation Biology John E. Fa,Stephan M. Funk,Donnamarie O'Connell,2011-08-18 In the face of ever declining biodiversity zoos have a major role to play in species conservation Written by professionals involved in in situ conservation and restoration projects internationally this is a critical assessment of the contribution of zoos to species conservation through evidence amassed from a wide range of sources The first part outlines the biodiversity context within which zoos should operate introducing the origins and global spread of zoos and exploring animal collection composition The second part focuses on the basic elements of keeping viable captive animal populations It considers the consequences of captivity on animals the genetics of captive populations and the performance of zoos in captive breeding The final part examines ways in which zoos can make a significant difference to conservation now and in the future Bridging the gap between pure science and applied conservation this is an ideal resource for both conservation biologists and zoo professionals

The Life, Extinction, and Rebreeding of Quagga Zebras Peter Heywood,2022-05-19 Quaggas were beautiful pony sized zebras in southern Africa that had fewer stripes on their bodies and legs and a browner body coloration than other zebras Indigenous people hunted quaggas portrayed them in rock art and told stories about them Settlers used quaggas to pull wagons and to protect livestock against predators Taken to Europe they were admired exhibited harnessed to carriages illustrated by famous artists and written about by scientists Excessive hunting led to quaggas extinction in the 1880s but DNA from museum specimens showed rebreeding was feasible and now zebras resembling quaggas live in their former habitats This rebreeding is compared with other de extinction and rewilding ventures and its appropriateness

discussed against the backdrop of conservation challenges including those facing other zebras In an Anthropocene of species extinction climate change and habitat loss which organisms and habitats should be saved and should attempts be made to restore extinct species *National Park Science* Jane Carruthers,2017-08-17 South Africa is renowned for its wildlife and environmental conservation in iconic national parks such as the Kruger one of the world s first formal protected areas However this is the first book to thoroughly analyse and explain the interesting and changing scientific research that has been accomplished in South Africa s national parks during the twentieth century Providing a fascinating and thorough historical narrative based on an extensive range of sources this text details the evolution of traditional natural history pursuits to modern conservation science in South Africa covering all research areas of conservation biology and all the national parks around the country It reveals the interaction between the international context government learning institutions and the public that has shaped the present conservation arena A complex story that will interest and inform not only those involved in conservation science of South Africa but worldwide Invading Ecological Networks Cang Hui,David Richardson,2022-01-13 Proposes new ways of managing ecological invasions by implementing an open adaptive network framework for ecosystem transformation Hunting Wildlife in the Tropics and Subtropics Julia E. Fa,Stephan M. Funk,Robert Nasi,2022-09-01 The hunting of wild animals for their meat has been a crucial activity in the evolution of humans It continues to be an essential source of food and a generator of income for millions of Indigenous and rural communities worldwide Conservationists rightly fear that excessive hunting of many animal species will cause their demise as has already happened throughout the Anthropocene Many species of large mammals and birds have been decimated or annihilated due to overhunting by humans If such pressures continue many other species will meet the same fate Equally if the use of wildlife resources is to continue by those who depend on it sustainable practices must be implemented These communities need to remain or become custodians of the wildlife resources within their lands for their own well being as well as for biodiversity in general This title is also available via Open Access on Cambridge Core **Why Conserve Nature?** Stephen Thomas Trudgill,Stephen Trudgill,2022-02-24 A philosophical discussion about the meanings of nature which can give rise to our motivations to conserve nature **Conservation Translocations** Martin J. Gaywood,John G. Ewen,Peter M. Hollingsworth,Axel Moehrensclager,2022-12-22 Conservation translocation the movement of species for conservation benefit includes reintroducing species into the wild reinforcing dwindling populations helping species shift ranges in the face of environmental change and moving species to enhance ecosystem function Conservation translocation can lead to clear conservation benefits and can excite and engage a broad spectrum of people However these projects are often complex and involve careful consideration and planning of biological and socio economic issues This volume draws on the latest research and experience of specialists from around the world to help provide guidance on best practice and to promote thinking over how conservation translocations can continue to be developed The key concepts cover project planning biological and social

factors influencing the efficacy of translocations and how to deal with complex decision making This book aims to inspire inform and help practitioners maximise their chances of success and minimise the risks of failure **Plant Conservation**

Science and Practice Stephen Blackmore,Sara Oldfield,2017-08-03 This book focuses on global efforts to protect plant diversity and the role that botanic gardens play in conserving plant species Soil Fauna Assemblages Uffe N.

Nielsen,2019-03-28 A holistic overview of soil fauna their contributions to ecosystem function and implications of global change belowground **Habitat Suitability and Distribution Models** Antoine Guisan,Wilfried Thuiller,Niklaus E.

Zimmermann,2017-09-14 This book introduces the key stages of niche based habitat suitability model building evaluation and prediction required for understanding and predicting future patterns of species and biodiversity Beginning with the main theory behind ecological niches and species distributions the book proceeds through all major steps of model building from conceptualization and model training to model evaluation and spatio temporal predictions Extensive examples using R support graduate students and researchers in quantifying ecological niches and predicting species distributions with their own data and help to address key environmental and conservation problems Reflecting this highly active field of research the book incorporates the latest developments from informatics and statistics as well as using data from remote sources such as satellite imagery A website at www.unil.ch/hsdm contains the codes and supporting material required to run the examples and teach courses **Landslide Ecology** Lawrence R. Walker,Aaron B. Shiels,2013 Landslides are dangerous fascinating phenomena understanding their biological and ecological aspects is essential for achieving slope stability and habitat restoration

History of Landscape Ecology in the United States Gary W. Barrett,Terry L. Barrett,Jianguo Wu,2015-06-23 This book describes the emergence of landscape ecology its current status as a new integrative science and how distinguished scholars in the field of landscape ecology view the future regarding new challenges and career opportunities Over the past thirty years landscape ecology has utilized development in technology and methodology e g satellites GIS and systems technologists to monitor large temporal spatial scale events and phenomena These events include changes in vegetative cover and composition due to both natural disturbance and human cause changes that have academic economic political and social manifestations There is little doubt due to the temporal spatial scale of this integrative science that scholars in fields of study ranging from anthropology to urban ecology will desire to compare their fields with landscape ecology during this intellectually and technologically fertile time History of Landscape Ecology in the United States brings to light the vital role that landscape ecologists will play in the future as the human population continues to increase and fragment the natural environment Landscape ecology is known as a synthesized intersection of disciplines but new theories concepts and principles have emerged that form the foundation of a new transdiscipline Land Use Intensification David Lindenmayer,Saul Cunningham,Andrew Young,2012 Can science suggest new and improved approaches to reducing the conflict between productive land use and biodiversity conservation There are many different viewpoints about the best way

to deal with the myriad issues associated with land use intensification and this book canvasses a number of these from different parts of the tropical and temperate world Chapters focus on whether science can suggest new and improved approaches to reducing the conflict between productive land use and biodiversity conservation

Natural Resource Management Reimagined Robert G. Woodmansee, John C. Moore, Dennis S. Ojima, Laurie Richards, 2021-03-11 The Systems Ecology Paradigm SEP incorporates humans as integral parts of ecosystems and emphasizes issues that have significant societal relevance such as grazing land forestland and agricultural ecosystem management biodiversity and global change impacts Accomplishing this societally relevant research requires cutting edge basic and applied research This book focuses on environmental and natural resource challenges confronting local to global societies for which the SEP methodology must be utilized for resolution Key elements of SEP are a holistic perspective of ecological social systems systems thinking and the ecosystem approach applied to real world complex environmental and natural resource problems The SEP and ecosystem approaches force scientific emphasis to be placed on collaborations with social scientists and behavioral learning and marketing professionals The SEP has given environmental scientists decision makers citizen stakeholders and land and water managers a powerful set of tools to analyse integrate knowledge and propose adoption of solutions to important local to global problems

Comparative Plant Succession Among Terrestrial Biomes of the World Karel Prach, Lawrence R. Walker, 2020-05-14 Provides a comparative approach to plant succession among all terrestrial biomes and disturbances helping to reveal generalizable patterns

Ecosystem Collapse and Recovery Adrian C. Newton, 2021-04-22 There is a growing concern that many important ecosystems such as coral reefs and tropical rain forests might be at risk of sudden collapse as a result of human disturbance At the same time efforts to support the recovery of degraded ecosystems are increasing through approaches such as ecological restoration and rewilding Given the dependence of human livelihoods on the multiple benefits provided by ecosystems there is an urgent need to understand the situations under which ecosystem collapse can occur and how ecosystem recovery can best be supported To help develop this understanding this volume provides the first scientific account of the ecological mechanisms associated with the collapse of ecosystems and their subsequent recovery After providing an overview of relevant theory the text evaluates these ideas in the light of available empirical evidence by profiling case studies drawn from both contemporary and prehistoric ecosystems Implications for conservation policy and practice are then examined
