**The Evolutionary Mechanism of Human Dysfunctional Behavior** Ivan Fuchs,2019-04-18 Why is humanity by far the most successful animal in the animal kingdom but when it comes to survival of the fittest we pull against the impulse toward natural selection Unique among vertebrates humans develop and practice varied forms of dysfunctional or maladaptive behavior the graver of which are categorized as mental disorders which doesn t sustain our species Dr Ivan Fuchs explains why this is the case setting his discussion within the fields of psychiatry evolutionary biology and genetics marshalling a wide range research to make a compelling case In this work Dr Ivan Fuchs provides his theory on human dysfunctional behavior rooted in Darwinian evolutionary thinking His theory includes 1 An attempt to identify the basic

evolutionary mechanism that leads to dysfunctional or maladaptive behavior that is increasing in human populations He proposes that this mechanism consists of progressive relaxation of selection pressures originating in the natural environment as a result of the technological and cultural development in human civilization These developments protect against many natural inconveniences and dangers such as harmful weather conditions scarce or unreliable food supplies cruel even deadly competition for life sustaining or reproductive resources danger of predation and so on The relaxation of natural selection pressures leads to excessive diversification of innate predispositions that due to the complexities of social coexistence has both far reaching beneficial as well as harmful consequences 2 Dr Fuchs deals primarily with severe forms of dysfunctional behavior categorized as mental disorders pinpointing those genetically based behavioral complexes which predispose humans to anxiety affective and personality disorders paranoia and schizophrenia 3 Dr Fuchs also makes clear that the above innate predispositions cannot lead by themselves to the whole clinical picture of diagnosable mental disorder categories In order for full blown clinical symptomatology to develop the innate predisposition has to interact with influences after childbirth first of all learning Consequently psychiatric understanding and research has to distinguish sharply between those mental brain structures and functions which constitute the innate predisposition to a certain mental disorder versus those ones involved secondarily during the lifespan This consideration is detailed in the case of schizophrenia spectrum of disorders The above theoretical considerations have important therapeutic preventive and research implications

**Perceiving in Depth, Volume 3: Other Mechanisms of Depth Perception** Ian P. Howard, 2012-01-27 The three volume work Perceiving in Depth is a sequel to Binocular Vision and Stereopsis and to Seeing in Depth both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world

Volume 3 addresses all depth perception mechanisms other than stereopsis. The book starts with an account of monocular cues to depth including accommodation, vergence, eye movements, perspective, interposition, shading, and motion parallax. A chapter on constancies in depth perception such as the ability to perceive the sizes and shapes of objects as they move or rotate in depth is followed by a chapter on the ways in which depth cues interact. The next chapter reviews sources of information such as changing disparity, image looming, and vergence eye movements used in the perception of objects moving in depth. Various pathologies of depth perception including visual neglect, stereoanomalies, and albinism are reviewed. Visual depth perception mechanisms through the animal kingdom are described starting with insects and progressing through crustaceans, fish, amphibians, reptiles, birds, and mammals. The chapter includes a discussion of how stereoscopic vision may have evolved. The next chapter describes how visual depth perception is used to guide reaching movements of the hand, avoiding obstacles, and walking to a distant object. The next three chapters review non-visual mechanisms of depth perception. Auditory mechanisms include auditory localization, echolocation in bats and marine mammals, and the lateral line system of fish. Some fish emit electric discharges and then use electric sense organs to detect distortions of the electric field produced by nearby objects. Some beetles and snakes use heat-sensitive sense organs to detect sources of heat. The volume ends with a discussion of mechanisms used by animals to navigate to a distant site. Ants find their way back to the nest by using landmarks and by integrating their walking movements. Several animals navigate by the stars or by polarized sunlight. It seems that animals in several phyla navigate by detecting the Earth's magnetic field.

**Ballad of a Slopsucker** Juan Alvarado Valdivia, 2019-02-15. A young widower visits Chichén Itz' to honor his wife. Family dynamics unravel at a child's birthday party. The lead singer of a high school metal band faces his dreaded tenth reunion. A serial killer believes he's been blessed by God to murder bicycle thieves. Alvarado Valdivia's debut collection of short stories ranges from dark to light and is written with a storyteller's skill and compassion. Based in Northern California and examining a variety of themes including love, family, and masculinity, these stories offer an important new perspective on the experiences of Latinos and Latinas in the United States and complicate ideas of nationhood, identity, and the definition of home.
