,1999 **International Conference on Laser Applications in Life Sciences** ,1994 **Laser Applications in Life Sciences** ,1990 **Biomedical Aspects of the Laser** Leon Goldman, 2013-11-09 This book is a review of past and current studies and future plans of the Laser Laboratory in Cincinnati and some of the contributions of laser research groups in other medical centers Special thanks are due to the Directing Physicist of the Laser Laboratory R James Rockwell Without his advice constant supervision and corrections this enthusiastic investigator would continue to upset even many more people than he has done already The excuse of course is to stimulate much needed interest and controlled research and development of the laser for biology and medicine The Associate Research Physicist Ralph Schooley has worked with many phases of laser research but especially in Q spoiling Raman spectroscopy and the almost alchemy of holography Holography as of now provides many opportunities for Gumperson's Law If anything can go wrong it will Sincere appreciation is expressed to the Surgeons in the Laser Laboratory who have supplied clinical and investigative surgical supervision often under great difficulties Dr V E Siler and Dr Bruce Henderson We are grateful for help from the Directing Biologist of the Laser Laboratory Edmond Ritter the Director of Laser Neurosurgery Dr Thomas Brown and the Professor of Neurosurgery Dr Robert McLaurin for important and basic work in laser neurosurgery Special thanks are given to Robert Meyer who has given most of the treatments in careful and skillful fashion and his associate Robert Otten **Laser Applications in Medicine and Biology** Myron Wolbarsht, 2012-10-20 If a basic advance in physics has any practical applications among the first are those in biology and medicine This is quite striking when one considers even such unlikely things as the Mossbauer effect and X rays Within a very short period of their discovery they had well formulated biological and medical applications The discovery of the laser is no exception Although the theoretical basis for it was established in 1917 by Einstein the techniques and materials necessary for building a laser were not then available The laser has revitalized everything connected with optics It has furnished the experimenter and the teacher with a pseudo point source It has translated many a

theoretical experiment into one that can be realized practically The highly monochromatic and coherent aspects of the light in addition to the high power levels that can be attained add greatly to the usefulness in this regard The industrial applications range from punching holes in baby bottle nipples to a surveyor's instrument of such accuracy that it can plot the position of the moon relative to the earth within a few feet Many years of very informal meeting on the subject of lasers in medicine and biology have been sponsored by the Gordon Research Conferences The present book is an outgrowth of the discussions that took place at these meetings although it is in no sense a symposium report     Laser Applications in Life Sciences: Lasers in biophysics and biomedicine ,1991     Laser Applications in Life Sciences ,2010
