The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.000	1.2	0.23
Gender of the head of household (Male = 1, Female = 0)	-0.05	0.02	-2.5	0.01
Constant	1.5	0.1	15.0	0.00

The regression results indicate that the age of the head of household has a very small, positive effect on the number of children in the household, which is not statistically significant. However, the gender of the head of household has a significant negative effect, suggesting that households headed by females tend to have fewer children than those headed by males.
