Lynden-Bell, Gerry Gilmore, 2012-12-06 The visible universe is a small perturbation on the material universe Zwicky and Sinclair Smith in the 1930s gave evidence of invisible mass in the Coma and Virgo Clusters of Galaxies Better optical data has only served to confound their critics and the X ray data confirms that the gravitational potentials are many times larger than those predicted on the basis of the observed stars Dynamical analyses of individual galaxies have found that significant extra mass is needed to explain their rotational velocities On much larger scales tens of megaparsecs there is suggestive evidence that there is even more mass per unit luminosity What is this non luminous stuff of which the universe is made How much of it is there Need there be only one kind of stuff There are three basic possibilities all of it is ordinary baryonic matter all of it is some other kind of non baryonic matter or some of it is baryonic and some is non baryonic Gamma-ray Astronomy P. V. Ramana Murthy, A. W. Wolfendale, 1993-04 The recent launch of NASA s Gamma Ray Observatory will increase interest in gamma ray astronomy This is a fully up dated new edition of the authors earlier volume published in 1986 and covers both the background science

and the current state of the art in this field The emphasis is on the astronomy and astrophysics of known sources of cosmic gamma rays outside the solar system The authors discuss the mechanisms for the production and absorption of gamma rays The gamma ray line astronomy of the interstellar medium galactic centre and various discrete sources is then considered Gamma ray bursts are treated in considerable detail in chapter three and the final two chapters describe medium energy and ultra high energy gamma rays Relevant data from supernova SN1987A is also included in this edition The book includes comprehensive references to the primary literature together with many figures and tables The concentration on phenomenology makes this book a fine introduction to gamma ray astronomy
