Looking Inside Cells

Kimberly Fekany Lee

Cell Membranes

Plant and animal cells are surrounded by a cell membrane. The cell membrane is flexible. It acts like the gatekeeper of a cell. It controls what goes in and out of cells. Some substances move easily through the cell membrane. Other substances cannot move through it.

The cell membrane of a plant cell is surrounded by a cell wall. Cell walls are not as flexible as cell membranes. They help to support plants.

When you water a plant, the plant moves water into its cells. The cell membrane pushes against the cell wall. The cell wall is rigid. It limits the size of a plant cell. Animal cells do not have cell walls. If an animal cell receives too much water, the cell will burst. It is like a balloon that is filled with too much air.

Reductionism and Systems Theory in the Life Sciences Paul Hoyningen-Huene, Franz M. Wuketits, 2012-12-06 The present volume aims at giving a discussion of the problems of reductionism in contemporary life sciences It contains six papers which deal with reductionism in different fields of biological research Also the holistic perspective and the systems view is discussed in some of the papers The message of this discussion is that whereas reductionism is indeed an important strategy the systems approach is needed It is argued by some of the authors that organisms are complex systems and not just heaps of molecules So that the analytical method does not suffice Recent developments in systems theory offer the possibility to install a more comprehensive view of living systems what can be seen particularly in the field of evolutionary biology It is true that any organismic activity is molecular this is to say that it is based on molecular mechanisms But it is also true that the whole organism displays certain patterns of behavior which are not just molecular Any organism can be described as a system of different levels of organization different levels of order and complexity and it is important therefore to study all of the organizational levels and to see their peculiarities It should be obvious however that there is not one problem of reductionism but that there are many problems linked together and that these problems appear at different levels of biological research and bio philosophical reflections **Cells and Cell Function** Sally Morgan, 2006 This title looks at all aspects of plant and animal cells Students learn about the different types of cells what is inside them how they make up tissues and how they reproduce In addition the book examines cloning and gene technology bacteria and viruses and how we can protect ourselves against disease **Key Discoveries in Life Science** Christine

apply discounted cash flow and real options valuation to life sciences projects i.e. to license contracts patents and firms We explain the fundamentals and the pitfalls with case studies so that the reader is capable of performing the valuations on his own and repeat the theory in the exercises and case studies The book is structured in five parts In the first part the introduction we discuss the role of the players in the life sciences industry and their particular interests We describe why valuation is important to them where they need it and the current problems to it The second part deals with the input parameters required for valuation in life sciences i.e. success rates costs peak sales and timelines
