## HAMMER TYPE

### Multi-Impact Spring Hammer

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (20-100 mesh). Based on the proven, spring-type hammer, featuring all their weight concentrated at the point of impact and rotating at high speed, several parallel shafts are mounted with variously spaced, curved breaker plates in the hammer and feed frame that the feed from bottom of hopper is carried up to the material before it reaches the crushing zone, thereby increasing wear on the hammers and grate.

These compact, sturdy mills, with hammer bearing housings are made in six sizes ranging 12" to 36" diameter in the vertical position in two operation. High percentage of fine stock sizes are produced — discharge gate for granular use or to suit requirements. They can be installed either open top or equipped for complete enclosed feeding systems as easily as needed.

## GYRATORY TYPES

### Gyrax — Size 14"

Light Weight but Sturdy  
High Efficiency  
Low Feed Rate

The Gyrax Fine Reduction Crusher is a lightweight machine combining power strength with an unusually high efficiency.

The Traxler design of ball feed and spread mechanism fitted to these crushers eliminates feeding and grinding between crushing faces.

The construction is uncomplicated and easy to maintain after bearings, and the eccentric shaft shaft and gears are all mounted in oil bath, further all circulating pump covered for a large oil reservoir.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rates and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or conical driving pulley.

### Traxler 'TY' and 'TZ'

Fine Reduction—Excellent Product  
High Speed—Large Capacity  
Low Overall Operating Costs

These crushers are manufactured under license to the Traxler Eng. & Mfg. Company of Pittsburgh, Pa., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both ball feed and ball spread mechanism with a heavy-duty frame, enough power efficiency and very maintenance free design like those of all our heavy, self-grinding, ball feed and spread crushers or all-round bar feed discharge without discharge gate, a self-contained mechanism assembly fitted with roller bearings.

The same capacity and efficiency of Traxler Gyratory Crushers is due to the advanced design of the ball feed and spread mechanism.

Crushing is achieved by increasing the capacity of each successive feeding zone — power requirements are reduced, even at fine settings for producing a grade just below the finest available in a closed crushing plant. The inherent efficiency for heavy material and crushing, without greatly increasing the size of these parts. Ideal for secondary and tertiary crushing operations.

## ROLL TYPE

### Double Crushing Roll

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mill.

The spacing capacity of rolls being broken, they should be selected of such diameter to produce the largest material in the feed.

Rolls have wide face for crushing rolls for combining capacity of various capacity. Rolls are usually run flat or conical, with adjustable wear on roll shaft.

Roll shafts can be run in horizontal, vertical, or inclined position, and may be either square, round, conical or wheel, according to the service required.

Roller frames or springs are fitted to provide the necessary crushing pressure and permit the movable roll to rotate about adjustable rollers under the machine.

## PLATE APRON TYPE

### 12" to 36" WIDE — 10' to 100' LONG — 100 to 1000 TON CAPACITY

These feeders are manufactured with frames in the Jaques Eng. & Mfg. Company, U.S.A. and are designed for heavy, portable construction with the impact of large loads of material dumped directly on to the feeder. They are most satisfactory when used with an impact crusher, a solid surface and power, or for an auxiliary, any Jaques material. The pans are linked together with heavy pins and are supported by large steel rollers running in extra heavy duty, hardened bearings mounted in rigid frame of heavy steel beam structure.
