Summary of Dava Sobel's Longitude Everest Media, 2022-04-30T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The latitude and longitude lines govern the world today as they have for centuries They were first mapped out by Ptolemy in his first world atlas in AD 150 2 The difference between latitude and longitude is that the zero degree parallel of latitude is fixed by the laws of nature while the zero degree meridian of longitude shifts like the sands of time To find your latitude you only need to know the length of the day or the height of the sun above the horizon whereas to find your longitude you need to know what time it is aboard ship and the time at your home port or another place of known longitude 3 The Age of Exploration was when many sailing vessels set out to conquer or explore new territories and the wealth of nations floated upon the oceans Still no ship had a reliable means for determining their whereabouts 4 The search for a solution to the longitude problem was like finding the Fountain of Youth the secret of perpetual motion or the formula for transforming lead into gold The British Parliament in its famous Longitude Act of 1714 set the highest bounty of all naming a prize equal to a king's ransom for a practical means of determining longitude

Shaping the Day Paul Glennie, Nigel Thrift, 2009-02-12 Timekeeping is an essential activity in the modern world and we take it for granted that our lives are shaped by the hours of the day. Yet what seems so ordinary today is actually the extraordinary outcome of centuries of technical innovation and circulation of ideas about time. *Shaping the Day* is a pathbreaking study of the practice of timekeeping in England and Wales between 1300 and 1800. Drawing on many unique historical sources ranging from personal diaries to housekeeping manuals, Paul Glennie and Nigel Thrift illustrate how a particular kind of common sense about time came into being and how it developed during this period. Many remarkable figures make their appearance ranging from the well known such as Edmund Halley, Samuel Pepys and John Harrison who solved the problem of longitude to less familiar characters including sailors, gamblers and burglars. Overturning many common perceptions of the past, for example that clock time and the industrial revolution were intimately related, this unique historical study will engage all readers interested in how telling the time has come to dominate our way of life.

And the Sun Stood Still Dava Sobel, 2016-03-01 Using her deep knowledge, her skills as a storyteller and her imagination, Dava Sobel illuminates one of history's most significant and far reaching meetings. In the spring of 1539 a young German mathematician, Georg Joachim Rheticus, journeyed hundreds of miles to northern Poland to meet the legendary elderly cleric and reluctant astronomer Nicolaus Copernicus. Some two decades earlier Copernicus had floated the mind boggling theory that the Sun, not the Earth, was stationary at the center of the universe and he was rumored to have crafted a book that could prove it. Though exactly what happened between them can never be known, Rheticus shepherded Copernicus's great work into production and *De revolutionibus orbium coelestium* ultimately changed the course of human understanding. Dava Sobel imagines their dramatic encounter and with wit and erudition gives them personality. Through clever and dramatic dialogue she brings alive the months Rheticus and Copernicus spent together: the one a heretical Lutheran, the other a free thinking Catholic, and in the process illuminates the historic tension between science and religion. An introduction by Dava Sobel will set the stage, putting the scenes in historical context, and an afterword will describe what happened after Copernicus's book was published.

detailing the impact it had on science and on civilization.
