Polymer Composites, Nanocomposites Sabu

Thomas, Kuruvilla Joseph, S. K. Malhotra, Koichi Goda, M. S. Sreekala, 2013-08-06 Polymer composites are materials in which the matrix polymer is reinforced with organic inorganic fillers of a definite size and shape leading to enhanced performance of the resultant composite. These materials find a wide number of applications in such diverse fields as geotextiles, building, electronics, medical packaging, and automobiles. This first systematic reference on the topic emphasizes the characteristics and dimension of this reinforcement. The authors are leading researchers in the field from academia, government, industry, as well as private research institutions across the globe and adopt a practical approach here covering such aspects as the preparation, characterization, properties, and theory of polymer composites. The book begins by discussing the state of the art, new challenges, and opportunities of various polymer composite systems. Interfacial characterization of the composites is discussed in detail, as is the macro and micromechanics of the composites. Structure-property relationships in various composite systems are explained with the help of theoretical models, while processing techniques for various macro to nanocomposite systems and the influence of processing parameters on the properties of the composite are reviewed in detail. The characterization of microstructure, elastic, viscoelastic, static and dynamic mechanical, thermal, tribological, rheological, optical, electrical, and barrier properties are highlighted, as well as their myriad applications. Divided into three volumes: Vol 1 Macro and Microcomposites, Vol 2 Nanocomposites, and Vol 3 Biocomposites.
