Imaging of Bone Tumors and Tumor-Like Lesions A. Mark Davies,Murali Sundaram,Steven J. James,2009-08-21 Detection and characterization of bone

tumors with imaging remains a big challenge for every radiologist notwithstanding the impressive progress achieved by the introduction of several new imaging modalities. Moreover, new concepts in surgical and oncological treatment of these lesions require from the radiologist appropriate and focused answers to the specific questions asked by the referring physicians in order to choose the best therapeutic approach for the individual patient. This comprehensive textbook describes in detail the possibilities and limits of all modalities including MRI, CT, nuclear medicine and interventional radiological procedures employed for the modern imaging of tumoral and tumor-like lesions of bone. Their role in the diagnosis, surgical staging, biopsy and assessment of response to therapy is discussed in detail, covering all tumor subtypes as well as their specific anatomical location. Well-selected and technically impeccable illustrations strongly enhance the didactic value of this work. I am very much indebted and grateful to the three editors: A. Mark Davies, Murali Sundaram and Steven L. J. James, world authorities in musculoskeletal radiology, for their superb scientific achievement in preparing and editing this wonderful volume, as well as for their individual chapters. I would also like to thank the large international group of collaborating authors who are also widely acknowledged for their specific expertise in the area of bone tumors for their outstanding contributions.
