Reggio Collaborative over the past 10 years *Handbook of Research on Using Educational Robotics to Facilitate Student Learning* Papadakis, Stamatios, Kalogiannakis, Michail, 2020-12-05 Over the last few years increasing attention has been focused on the development of children's acquisition of 21st century skills and digital competences. Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns. Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low. There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking, algorithmic thinking and project management. Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering. The *Handbook of Research on Using Educational Robotics to Facilitate Student Learning* is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps. The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities. It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action: 1. computational identity which shows the importance of young people's development of scientific identity for future STEM growth and 2. digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways. Covering subthemes including student competency and assessment, programming education and teacher and mentor development, this book is ideal for teachers, instructional designers, educational technology developers, school administrators, academicians, researchers and students.

Capturing Children's Meanings in Early Childhood Research and Practice Ann Marie Halpenny, 2020-11-26 *Capturing Children's Meanings in Early Childhood Research and Practice* draws together contemporary research and established theories to produce a unique take on the meanings children express through a range of creative tools. Drawing on Reggio Emilia and the Mosaic approach, this book provides readers with a range of strategies for accessing, recording and interpreting young children's perceptions of and responses to their experiences. Providing a synthesis of the multiple imaginative ways we can capture young children's meanings through observations, art, photo elicitation, mindfulness, music and other creative methods, Halpenny covers topics such as: Negotiating challenges presented by researching with children; Frameworks for seeing and hearing children's intentions; Accurately documenting and interpreting research findings; Promoting children's meanings and their performance of them; Moving forward with new understandings. This book is an indispensable resource for students of early childhood education, especially for courses focusing on the lived experiences of children from early to middle childhood. It is also a useful reference for those working with young children in educational and caregiving settings and for those advocating for young children. *Emergent*
