Cytomegaloviruses James K. McDougall,2012-12-06 Named for the enlarged inclusion bearing cells characteristic of infection by these viruses cytomegaloviruses present a significant challenge to both microbiologist and immunologist Although most primary infections in humans are subclinical cytomegalovirus can be associated with a wide spectrum of disease particularly when infection occurs in the immuno compromised individual or as a result of congenital or perinatal infection Although reinfection with cytomegalovirus has been demonstrated most recurrent and persistent infections result from the reactivation of latent virus Cytomegaloviruses like other members of the Herpesviridae family have the capacity to establish latency after a primary infection but the mechanisms for establishing the nonreplicating but reactivat able state have not been defined The factors responsible for the spectrum of manifestations of cytomegalovirus infection are largely undetermined but host immunological function route of infection and size of inoculum all contribute to the extent and severity of disease Cytomegaloviruses have the largest genomes in the herpes virus family approximately 240 kilo base pairs providing a potential coding capacity for more than 200 proteins of which less than one fourth have been mapped and described There are many similarities to other herpes viruses in genome structure and gene expression for example three temporal classes of genes can be identified as  $\alpha$  immediate early  $\beta$  early and  $\gamma$  late products The first five chapters of this

volume review and describe recent developments in understanding the transcription and regulation of these gene classes

Where Do We Come From? Jan Klein, Naoyuki Takahata, 2013-03-09 From the moment it first began to contemplate the world three questions have occupied the human mind Where do we come from What are we Where are we going Artists notably Paul Gauguin religious

thinkers philosophers and most recently scientists have all searched for answers Here the authors describe how scientists decipher human origin from the record encrypted in the DNA and protein molecules After explaining the nature of descent and the methods available for studying genealogical relationships they summarize the information revealed by the molecular archives about the Tree of Life and our location on one of its branches The knowledge thus gleaned allows them to draw conclusions about our identity our place in the living world our future and the ethical implications of the changed perspective

**Molecular Mechanisms of Resistance to Agrochemicals** Volkert Sjut, 2013-03-14 Over the past 30 years one alarming trend is the emergence of plant species resistant to agrochemicals e g insecticides herbicides fungicides Considering the fact that these pesticides are crucial to human health and to food feed and fiber production impressive research was carried out during the last decade to understand the mechanisms of resistance development This volume reviews the latest results and examines the implications of these findings for delaying or avoiding resistance in plants to agrochemicals *Index Medicus* ,2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
