Biodiversity of Fungi is essential for anyone collecting and or monitoring any fungi. Standardized methods for documenting diversity and distribution have been lacking. A wealth of information especially regarding sampling protocols compiled by an international team of fungal biologists make Biodiversity of Fungi an incredible and fundamental resource for the study of organismal biodiversity. Chapters cover everything from what is a fungus to maintaining and organizing a permanent study collection with associated databases from protocols for sampling slime molds to insect associated fungi from fungi growing on and in animals and plants to mushrooms and truffles. The chapters are arranged both ecologically and by sampling method rather than by taxonomic group for ease of use. The information presented here is intended for everyone interested in fungi anyone who needs tools to study them in nature including naturalists land managers ecologists mycologists and even citizen scientists and sophisticated amateurs. Covers all groups of fungi from molds to mushrooms even slime molds. Describes sampling protocols for many groups of fungi. Arranged by sampling method and ecology to coincide with users needs.
