Summability of Multi-Dimensional Fourier Series and Hardy Spaces Ferenc Weisz, 2013-06-29 The history of martingale theory goes back to the early fifties when Doob 57 pointed out the connection between martingales and analytic functions On the basis of Burkholder's scientific achievements the martingale theory can perfectly well be applied in complex analysis and in the theory of classical Hardy spaces This connection is the main point of Durrett's book 60 The martingale theory can also be well applied in stochastics and mathematical finance The theories of the one parameter martingale and the classical Hardy spaces are discussed exhaustively in the literature see Garsia 83 Neveu 138 Dellacherie and Meyer 54-55 Long 124 Weisz 216 and Duren 59 Stein 193-194 Stein and Weiss 192 Lu 125 Uchiyama 205 The theory of more parameter martingales and martingale Hardy spaces is investigated in Imkeller 107 and Weisz 216 This is the first monograph which considers the theory of more parameter classical Hardy spaces The methods of proofs for one and several parameters are entirely different in most cases the theorems stated for several parameters are much more difficult to verify The so called atomic decomposition method that can be applied both in the one and more parameter cases was considered for martingales by the author in 216

Harmonic Analysis J. Marshall Ash, Roger L. Jones, 2006 Starting in the early 1950s Alberto Calderón Antoni Zygmund and their

students developed a program in harmonic analysis with far reaching consequences The title of these proceedings reflects this broad reach This book came out of a DePaul University conference honoring Stephen Vagi upon his retirement in 2002 Vagi was a student of Calderon in the 1960 s when Calderon and Zygmund were at their peak Two authors Kenig and Gatto were students of Calderon one Muckenhoupt was a student of Zygmund Two others studied under Zygmund s student Elias Stein The remaining authors all have close connections with the Calderon Zygmund school of analysis This book should interest specialists in harmonic analysis and those curious to see it applied to partial differential equations and ergodic theory In the first article Adam Koranyi summarizes Vagi s work Four additional articles cover various recent developments in harmonic analysis Eduardo Gatto studies spaces with doubling and non doubling measures Cora Sadosky product spaces Benjamin Muckenhoupt Laguerre expansions and Roger Jones singular integrals Charles Fefferman and Carlos Kenig present applications to partial differential equations and Stephen Wainger gives an application to ergodic theory The final article records some interesting open questions from a problem session that concluded the conference

Commutative Harmonic Analysis I V.P. Khavin, N.K. Nikol'skij, 1991-08-15 This volume is the first in the series devoted to the commutative harmonic analysis a fundamental part of the contemporary mathematics The fundamental nature of this subject however has been determined so long ago that unlike in other volumes of this publication we have to start with simple notions which have been in constant use in mathematics and physics Planning the series as a whole we have assumed that harmonic analysis is based on a small number of axioms simply and clearly formulated in terms of group theory which illustrate its sources of ideas However our subject cannot be completely reduced to those axioms This part of mathematics is so well developed and has so many different sides to it that no abstract scheme is able to cover its immense concreteness completely In particular it

relates to an enormous stock of facts accumulated by the classical trigonometric harmonic analysis Moreover subjected to a general mathematical tendency of integration and diffusion of conventional intersubject borders harmonic analysis in its modern form more and more rests on non translation invariant constructions For example one of the most significant achievements of latter decades which has substantially changed the whole shape of harmonic analysis is the penetration in this subject of subtle techniques of singular integral operators

Harmonic Analysis and Nonlinear Differential Equations Victor Lenard Shapiro, Michel Laurent Lapidus, 1997 There are also several survey articles on recent developments in multiple trigonometric series dyadic harmonic analysis special functions analysis on fractals and shock waves as well as papers with new results in nonlinear differential equations These survey articles along with several of the research articles cover a wide variety of applications such as turbulence general relativity and black holes neural networks and diffusion and wave propagation in porous media
