

## [1] TYPES OF TRANSMISSION

Transmissions are largely classified into two types: mechanical transmissions and hydraulic assisted transmissions. This chapter discusses the mechanical transmissions. Three major types of mechanical transmissions are the sliding gear, the collar shift and the synchromesh transmissions.

### 1) Sliding Gear

The sliding gear transmission has two or more shafts mounted in parallel or in line, with sliding spur gears arranged to mesh with each other and provide a change in speed or direction.

This device is a popular transmission for use in farm and industrial machines.

Made up mainly of spur gears and shafts, it is simple but gives a variety of speeds.

### 2) Collar Shift

The collar shift transmission has parallel shafts with gears in constant mesh.

Shifting is done by locking free-running gears to their shafts using sliding collars.

### 3) Synchromesh

The synchromesh transmission is basically a constant mesh, collar-shift transmission with an extra device (called a synchronizer) to equalize the speed of the mating parts before they engage. The synchronizer is used in all manual automotive transmissions and is common in other machines where "on-the-go" shifting is required.

Four common types of synchronizers are block-type, pin-type, disk-and-plate-type and plain-type synchronizer. In this tractor, block-type and pin-type synchronizers are used. For operations, refer to the following.

(1) Block-type Synchromesh  
(Main speed change 2nd-3rd speed)

(2) Pin-type Synchromesh  
(Main speed change 1st speed-Reverse)
